**Subject: Tuning Information**

**Applicant:** Wavenet Technology Pty Ltd  
**Product:** Wireless Radio Modem for iPAQ  
**Model:** DWI-800D  
**FCC ID:** PQS-DWI800D

Dear Sir/Madam,

The Dualwave-I modem is a broadband device across the authorised band with controlled output power that is flat across the same band. As such there is no tuning procedure to be performed or required. The functional operation and system description is provided in Exhibit 10 "Operational Description".

The operating frequency range of the device is fixed in the modem firmware at the time of manufacture and cannot be changed by the user. The frequency band is restricted to that permitted by the FCC.

The transmit output power and duty cycle is fixed in the modem firmware at the time of manufacture and cannot be changed by the user. The output power level is measured and fixed using calibrated test equipment to the approved level of 33dBm maximum. The duty cycle limit is set to 10%.

Yours sincerely

**DAVID SHAWCROSS**  
**Technology Manager**
