

Power measurement connection diagram:

The power measurement for 2G/3G/LTE /UL and DL CA is to establish a connection between device and call box, and via call box to configure Bands, channel, BWs, RB size, carrier aggregation of CA, frequency channels, SCS and maximum output power. Hereunder is screenshot call box connection information for 2G/3G/LTE /UL and DL CA.

<GSM>

<WCDMA>

The screenshot shows the WCDMA measurement interface. The left sidebar lists various measurement categories. The main area displays channel information and measurement results. A red box highlights the top section showing UL and DL channels with their respective frequencies and input/output levels. Another red box highlights the 'Power Measurement' section under 'Fundamental > Numeric', which shows TX Power at 23.28 dBm.

UL Channel	UL Frequency	Input Level
9400 CH	1 880.000 000 MHz	35.0 dBm

DL Channel	DL Frequency	Output Level
9800 CH	1 960.000 000 MHz	-65.7 dBm

Average Count PWR_AVG
Sets the average count (measurement count) for power measurement.

UE Power : 22.6 dBm

Measurement Signaling

Power Measurement (50 / 50)
TX Power 23.28 dBm

<LTE>

The screenshot shows the LTE measurement interface. The left sidebar lists various measurement categories. The main area displays channel information and measurement results. A red box highlights the 'Uplink Downlink Configuration' section under 'Test Parameter', which shows the configuration as 1: (5ms) D S U U D D S U U D. Another red box highlights the 'Numeric' section under 'Measurement', which shows TX Power at 23.01 dBm.

UL Channel	TPC Pattern	Input Level
21100 ch	All +3dB	30.0 dBm

Operation Band	Channel Bandwidth	Output Level
7	20 MHz	-67.0 dBm

External Loss - Main DL DLEXLOSS
This sets the DL offset at the Main connector. Loss is set as a positive value. The argument tx enables setting a different loss value per internal signal generator.

UE Power : 23.4 dBm

Measurement Signaling

Numeric TX Power 23.01 dBm

<LTE TDD Power class 3>

The screenshot shows the MT8821C software interface for LTE TDD testing. The top status bar indicates 'Phone2 LTE 40.20S#021' and 'Phone1 LTE 40.20S#021'. The main window displays various measurement tabs like PCC, SCC1, SCC2, SCC3, etc. On the left, a sidebar lists categories such as Common, Physical Channel, Call Processing, TX Measurement, RX Measurement, Fundamental Measurement, Test Parameter, Band Definition, External Loss, and System Config. Under 'Test Parameter', the 'TDD' section is selected, and its sub-sections 'Uplink Downlink Configuration' and 'Special Subframe Configuration' are highlighted with a red box. The central part of the screen shows measurement results for 'Measurement' and 'Signaling' categories, with specific values like 'TX Power 23.19 dBm' highlighted in a red box. The right side of the interface includes a 'Main Screen' panel with options like 'Fundamental', 'Sub Screen', and 'Top', and a 'Measuring...' panel with Tx/Rx levels and modes (Single, Continuous). A status bar at the bottom right shows 'MT8821C 2024/05/31 12:39 RF Output : On'.

LTE Uplink and Downlink Carrier Aggregation configurations:

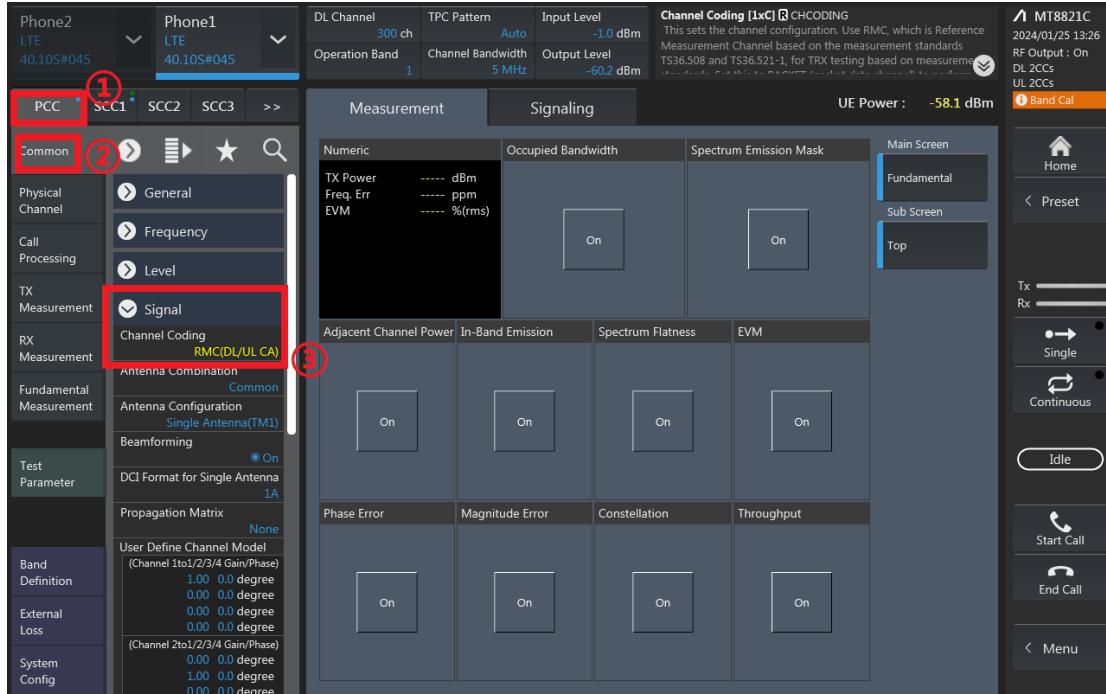

1. Change the Scenario in the Configuration of Phone1 LTE Signaling and Preset.

The screenshot shows the MT8821C software interface for LTE signaling and preset configuration. The top status bar indicates 'Phone2 LTE 40.10S#045' and 'Phone1 LTE 40.10S#045'. The main window displays measurement tabs like PCC, SCC1, SCC2, SCC3, etc. On the left, a sidebar lists categories such as Common, Physical Channel, Call Processing, TX Measurement, RX Measurement, Fundamental Measurement, Test Parameter, Band Definition, External Loss, and System Config. Under 'Test Parameter', the 'TDD' section is selected. The right side of the interface includes a 'Main Screen' panel with options like 'Fundamental', 'Sub Screen', and 'Top', and a 'Measuring...' panel with Tx/Rx levels and modes (Single, Continuous). A status bar at the bottom right shows 'MT8821C 2024/01/25 13:26 RF Output : On'. A red box highlights the 'Preset' button in the right-hand menu.

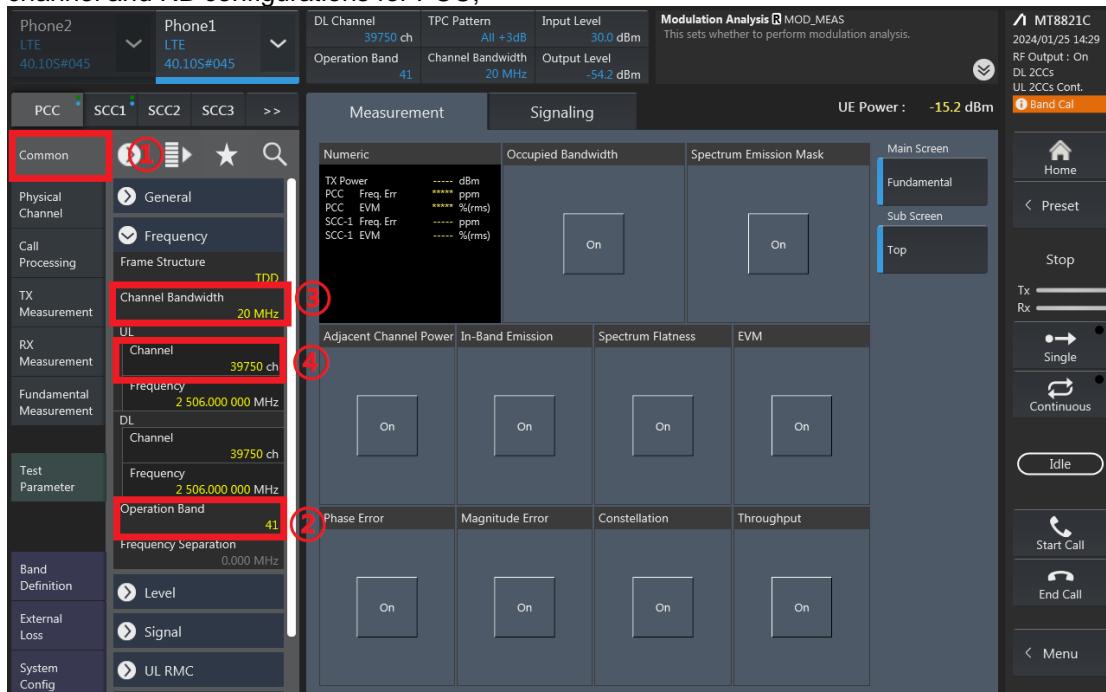

2. If Select “RMC (DL/UL CA)” for Uplink Carrier Aggregation;
 If Select “RMC (DL CA)” for Downlink Carrier Aggregation.
 For example, Uplink Carrier Aggregation:

Detailed operation: PCC → Common → Signal → Channel Coding → Select 【RMC (DL/UL CA)】

3. PCC parameter Settings: on the screen, and then select the PCC tab and Set operating band, BW, channel and RB configurations for PCC;

RB configurations (Number of RB / Starting RB) for PCC;

Phone2 LTE 40.10S#045 Phone1 LTE 40.10S#045

DL Channel 39750 ch TPC Pattern All +3dB Input Level 30.0 dBm
Operation Band 41 Channel Bandwidth 20 MHz Output Level -54.2 dBm

Modulation Analysis MOD_MEAS
This sets whether to perform modulation analysis.

UE Power : -15.5 dBm

4. SCC parameter Settings: Select the SCC1 tab, Set operating band, BW, channel, and RB configurations for SCC1;

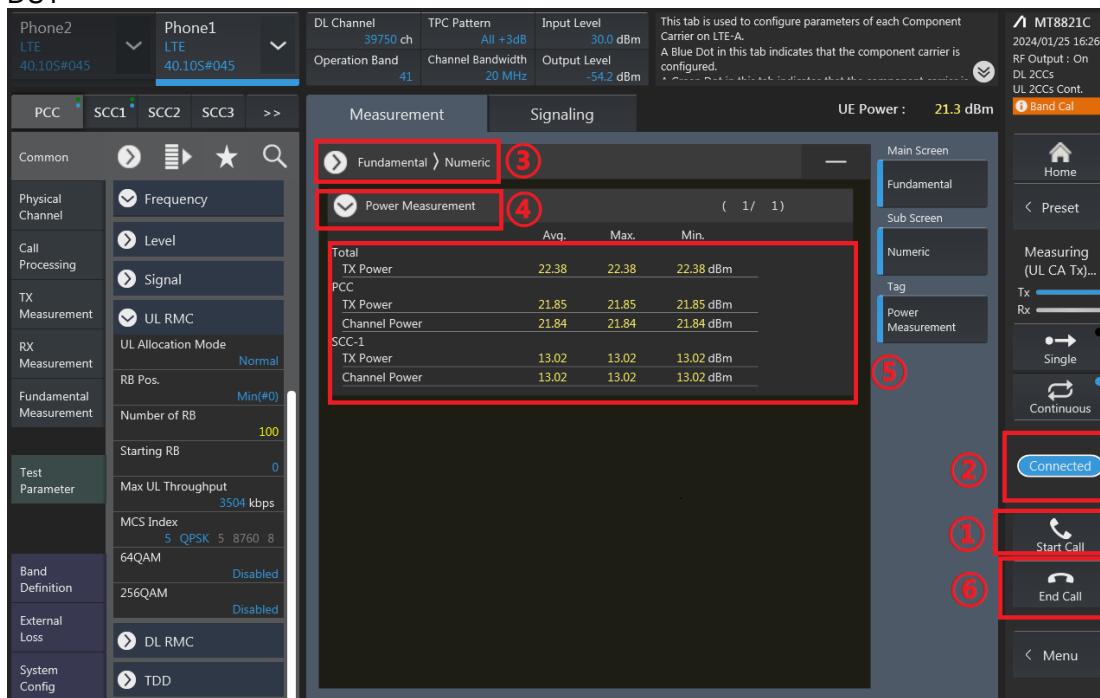

RB configurations (Number of RB / Starting RB) for SCC1;

5. Select the PCC tab, then set “SIM Model Number” and select max power;

6. Click the “Connect” button at the Right of the screen, if necessary, turn the Airplane mode on/off in the DUT

7. The inter-band DLCA test method is similar to intra-band DLCA.

Uplink CA Power

CA_7C Ant0 Default Combination 20MHz+20MHz (100RB+100RB)								
PCC Channel	SCC Channel	Modulation	PCC		SCC		Measured Power (dBm)	Tune up Power (dBm)
