Summary8

Appendix A: Test results for FCC PART 27 / RSS-130, RSS-1399

Competences and guarantees

DEKRA Testing and Certification S.A.U. is a testing laboratory competent to carry out the tests described in this report.

DEKRA Testing and Certification is a FCC-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification S.A.U. has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification S.A.U. guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification S.A.U. at the time of performance of the test.

DEKRA Testing and Certification S.A.U. is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification S.A.U.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification S.A.U.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification S.A.U. and the Accreditation Bodies.

Uncertainty

Uncertainty (factor $k=2$) was calculated according to the DEKRA Testing and Certification S.A.U. internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample of the model LE910C1-SAX is a LTE Wireless module with LTE Cat.1; LTE bands: FDD B2, B4, B12, B66; Data Capability: LTE CAT1 10/5 Mb.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples undergoing test have been selected by: The client.

- Sample S/01 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
66136/011	LTE Wireless module	LE910C1-SAX	--	2020/09/23
66136/017	Antenna	--	--	2020/09/23
66136/018	Antenna	--	--	2020/09/23
66136/020	Antenna	--	--	2020/09/23

Auxiliary elements used with the Sample S/01:

Control N°	Description	Model	Serial N°	Date of reception
66136/012	Cradle	--	--	2020/09/23
66136/026	Power Cable DC	--	--	2020/09/23

Sample S/01 has undergone the following test(s): The Radiated tests indicated in Appendix A.

- Sample S/02 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
66136/011	LTE Wireless module	LE910C1-SAX	--	2020/09/23

Auxiliary elements used with the Sample S/01:

Control N°	Description	Model	Serial N°	Date of reception
66136/012	Cradle	--	--	2020/09/23
66136/026	Power Cable DC	--	--	2020/09/23

Sample S/02 has undergone the following test(s): The Conducted tests indicated in Appendix A.

13th Fl., Shinyoung Securities Bld, 6, Gukjegeumyung-ro 8-gil, Yeongdeungpo-gu, Seoul, 07330, South Korea

Testing period and place

Test Location	DEKRA Testing and Certification S.A.U.
Date (start)	2020-09-23
Date (finish)	2020-10-21

Document history

Report number	Date	Description
66136RRF.002	2020-11-05	First release
66136RRF.002A1	2020-11-20	Second release: First modification due to typos. This modification test report cancels and replaces the test report 66136RRF.002

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the semianechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

Remarks and comments

The tests have been performed by the technical personnel: Cristina Calle, Miguel Manuel López, Javier Miguel Nadales and Verónica García.

Used instrumentation:

TEST CONDITIONS

POWER SUPPLY (V):

Vn: 3.80 Vdc
Vmin: 3.23 Vdc (*)
Vmax: 4.37 Vdc (*)

Type of Power Supply: Internal DC.

The subscripts 'n', 'min' and 'max' indicate voltage test conditions (nominal, minimum and maximum respectively), as declared by the applicant.

ANTENNA:

LOW Bands		ANTENNA TYPE
LTE Band 12	+3 dBi	External (Dipole)

MIDDLE Bands		ANTENNA TYPE
LTE Band 66	+3.5 dBi	External (Dipole)

TEST FREQUENCIES:

LTE Band 4. QPSK AND 16QAM MODULATION:

	Channel (Frequency. MHz)					
	BW = 1.4 MHz	BW = 3 MHz	BW = 5 MHz	BW = 10 MHz	BW = 15 MHz	BW = 20 MHz
Lowest	19957 (1710.7)	19965 (1711.5)	19975 (1712.5)	20000 (1715.0)	20025 (1717.5)	20050 (1720.0)
Middle	20175 (1732.5)	20175 (1732.5)	20175 (1732.5)	20175 (1732.5)	20175 (1732.5)	20175 (1732.5)
Highest	20393 (1754.3)	20385 (1753.5)	20375 (1752.5)	20350 (1750.0)	20325 (1747.5)	20300 (1745.0)

NOTE: This band is completely included in LTE Band 66, so the channels of Band 66 were tested to give conformity to the assigned block.

LTE Band 12. QPSK AND 16QAM MODULATION:

	Channel (Frequency)			
	BW = 1.4 MHz	BW = 3 MHz	BW = 5 MHz	BW = 10 MHz
Low	23017 (699.7 MHz)	23025 (700.5 MHz)	23035 (701.5 MHz)	23060 (704.0 MHz)
Middle	23095 (707.5 MHz)	23095 (707.5 MHz)	23095 (707.5 MHz)	23095 (707.5 MHz)
High	23173 (715.3 MHz)	23165 (714.5 MHz)	23155 (713.5 MHz)	23130 (711.0 MHz)

Note: LTE Category 1 device, so for BW=10 MHz the 16QAM modulation does not support transmission in RB=All.

LTE Band 66. QPSK AND 16QAM MODULATION:

	Channel (Frequency)					
	BW = 1.4 MHz	BW = 3 MHz	BW = 5 MHz	BW = 10 MHz	BW = 15 MHz	BW = 20 MHz
Low	131979 (1710.7 MHz)	131987 (1711.5 MHz)	131997 (1712.5 MHz)	132022 (1715.0 MHz)	132047 (1717.5 MHz)	132072 (1720.0 MHz)
Middle	132322 (1745.0 MHz)	132322 (1745.0 MHz)	132322 (1745.0 MHz)	132322 (1745.0 MHz)	132322 (1745.0 MHz)	132322 (1745.0 MHz)
High	132665 (1779.3 MHz)	132657 (1778.5 MHz)	132647 (1777.5 MHz)	132622 (1775.0 MHz)	132597 (1772.5 MHz)	132572 (1770.0 MHz)

Note: LTE Category 1 device, so for BW=10 MHz, 15 MHz and 20 MHz the 16QAM modulation does not support transmission in RB=All.

RF Output Power

SPECIFICATION:

FCC §27.50 (c) (10):

(10) Portable stations (hand-held devices) in the 600 MHz uplink band and the 698-746 MHz band, and fixed and mobile stations in the 600 MHz uplink band are limited to 3 watts ERP.

FCC §27.50 (d) (4) & (5):

(4) Fixed, mobile, and portable (hand-held) stations operating in the 1710-1755 MHz band and mobile and portable stations operating in the 1695-1710 MHz and 1755-1780 MHz bands are limited to 1 watt EIRP. Fixed stations operating in the 1710-1755 MHz band are limited to a maximum antenna height of 10 meters above ground. Mobile and portable stations operating in these bands must employ a means for limiting power to the minimum necessary for successful communications.

(5) Equipment employed must be authorized in accordance with the provisions of §24.51. Power measurements for transmissions by stations authorized under this section may be made either in accordance with a Commission-approved average power technique or in compliance with paragraph (d)(6) of this section. In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

RSS-130 Clause 4.6:

4.6.1 General

The transmitter output power shall be measured in terms of average power. In addition, the peak-to-average power ratio (PAPR) of the transmitter shall not exceed 13 dB for more than 0.1% of the time and shall use a signal corresponding to the High PAPR during periods of continuous transmission.

4.6.2 Frequency bands 617-652 MHz and 663-698 MHz

The e.r.p. shall not exceed 3 watts for mobile equipment, fixed subscriber equipment and portable equipment.

For base and fixed equipment other than fixed subscriber equipment, refer to SRSP-518 for the equivalent isotropically radiated power (e.i.r.p.) limits.

4.6.3 Frequency bands 698-756 MHz and 777-787 MHz

The e.r.p. shall not exceed 30 watts for mobile equipment and outdoor fixed subscriber equipment. The e.r.p. shall not exceed 3 watts for portable equipment and indoor fixed subscriber equipment.

For base and fixed equipment other than fixed subscriber equipment, refer to SRSP-518 for the e.i.r.p. limits.

RSS-139 Clause 6.5:

The equivalent isotropically radiated power (e.i.r.p.) for mobile and portable transmitters shall not exceed one watt. The e.i.r.p. for fixed and base stations in the band 1710-1780 MHz shall not exceed one watt.

Consult SRSP-513 for e.i.r.p. limits on fixed and base stations operating in the band 2110-2180 MHz.

In addition, the peak to average power ratio (PAPR) of the equipment shall not exceed 13 dB for more than 0.1% of the time, using a signal that corresponds to the High PAPR during periods of continuous transmission.

METHOD:

The conducted RF output power measurements were made at the RF output terminals of the EUT using the power meter of the Universal Radio Communication tester R&S CMW500, selecting maximum transmission power of the EUT and different modes of modulation.

The maximum equivalent isotropically radiated power (e.i.r.p.) is calculated by adding the declared maximum antenna gain (dBi).

The maximum effective radiated power e.r.p. is calculated from the maximum equivalent isotropically radiated power (e.i.r.p.) by subtracting 2.15 dB:

$$E.R.P. = E.I.R.P. - 2.15 \text{ dB}$$

The peak-to-average power ratio (PAPR) is measured using an attenuator, power splitter and spectrum analyser with a Complementary Cumulative Distribution Function implemented.

The EUT was controlled via the Universal Radio Communication tester R&S CMW500 selecting maximum transmission power of the EUT and different modes of modulation.

TEST SETUP:

1. CONDUCTED AVERAGE POWER:

2. PEAK-TO-AVERAGE POWER RATIO (PAPR) and Conducted Average power:

RESULTS:

1. CONDUCTED AVERAGE POWER:

LTE Band 12:

LTE Band 12. QPSK MODULATION. Bandwidth = 1.4 MHz.

Channel	Low	Middle	High
Maximum declared antenna gain (dBi)	+3	+3	+3
Measured maximum average power (dBm) at antenna port	23.27	22.94	23.13
Maximum equivalent isotropically radiated power (E.I.R.P.) (dBm)	26.27	25.94	26.13
Maximum effective radiated power E.R.P. (dBm)	24.12	23.79	23.98
PAPR (dB)	(*)	(*)	(*)
Measurement uncertainty (dB)	<±1.58		

Worst case AVERAGE POWER: Modulation QPSK. RB Size: 1. RB Offset: 0.

(*): Preliminary measurements determined that the modulation 16QAM, RB Size: 6, RB Offset: 0 as the worst case. The results in the next tables shows the results for this configuration.

LTE Band 12. 16QAM MODULATION. Bandwidth = 1.4 MHz.

Channel	Low	Middle	High
Maximum declared antenna gain (dBi)	+3	+3	+3
Measured maximum average power (dBm) at antenna port	21.79	22.11	22.51
Maximum equivalent isotropically radiated power (E.I.R.P.) (dBm)	24.79	25.11	25.51
Maximum effective radiated power E.R.P. (dBm)	22.64	22.96	23.36
PAPR (dB)	6.15	5.96	5.98
Measurement uncertainty (dB)	<±1.58		

Worst case AVERAGE POWER: Modulation 16QAM. RB Size: 1. RB Offset: 0.

Worst case PAPR: Modulation 16QAM. RB Size: 6. RB Offset: 0.

LTE Band 12. QPSK MODULATION. Bandwidth = 3 MHz.

Channel	Low	Middle	High
Maximum declared antenna gain (dBi)	+3	+3	+3
Measured maximum average power (dBm) at antenna port	23.19	23.25	23.19
Maximum equivalent isotropically radiated power (E.I.R.P.) (dBm)	26.19	26.25	26.19
Maximum effective radiated power E.R.P. (dBm)	24.04	24.10	24.04
PAPR (dB)	(*)	(*)	(*)
Measurement uncertainty (dB)	<±1.58		

Worst case AVERAGE POWER: Modulation QPSK. RB Size: 1. RB Offset: 7.
(*): Preliminary measurements determined that the modulation 16QAM, RB Size: 15, RB Offset: 0 as the worst case.
The results in the next tables shows the results for this configuration.

LTE Band 12. 16QAM MODULATION. Bandwidth = 3 MHz.

Channel	Low	Middle	High
Maximum declared antenna gain (dBi)	+3	+3	+3
Measured maximum average power (dBm) at antenna port	22.31	22.45	21.84
Maximum equivalent isotropically radiated power (E.I.R.P.) (dBm)	25.31	25.45	24.84
Maximum effective radiated power E.R.P. (dBm)	23.16	23.30	22.69

Modulation Characteristics

SPECIFICATION:

FCC §2.1047: Measurements required: Modulation characteristics.

RSS-130 Clause 4.2: Equipment certified under this standard shall employ digital modulation.

RSS-139 Clause 6.2. : Modulation characteristics.

METHOD:

For LTE the EUT operates with QPSK and 16QAM modulation modes in which the information is digitised and coded into a bit stream. The RF transmission is multiplexed using *Orthogonal Frequency Division Multiplexing (OFDM)* using different possible arrangement of subcarriers (Resource Blocks RB).

TEST SETUP:

RESULTS:

The following plots show the modulation schemes in the EUT.

LTE Band 12. QPSK MODULATION. BW = 10 MHz.

LTE Band 12. 16QAM MODULATION. BW = 10 MHz.

LTE Band 66. QPSK MODULATION. BW = 10 MHz.

LTE Band 66. 16QAM MODULATION. BW = 10 MHz.

Frequency Stability

SPECIFICATION:

FCC §27.54 & §2.1055:

The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation.

RSS-130 Clause 4.5:

For equipment that is capable of transmitting numerous channels simultaneously for different applications (e.g. LTE and narrowband – Internet of Things (IoT)), the occupied bandwidth shall be the bandwidth representing the sum of the occupied bandwidths of these channels.

The frequency stability shall be sufficient to ensure that the occupied bandwidth remains within each operating frequency block range when tested at the temperature and supply voltage variations specified in RSS-Gen.

RSS-139 Clause 6.4:

The frequency stability shall be sufficient to ensure that the occupied bandwidth stays within the operating frequency block when tested to the temperature and supply voltage variations specified in RSS-Gen.

METHOD:

The frequency tolerance measurements over temperature variations were made over the temperature range of –30°C to +50°C. The EUT was placed inside a climatic chamber and the temperature was raised hourly in 10°C steps from –30°C up to +50°C.

The supply voltage was varied between 85% and 115% of nominal voltage.

The EUT was set in “Radio Resource Control (RRC) mode” in the middle channel using the Universal Radio Communication tester R&S CMW500 and the maximum frequency error was measured using the built-in calibrated frequency meter.

The worst case LTE mode for conducted power was used for the test.

In order to check that the frequency stability is sufficient such that the fundamental emissions stay within the authorized bands of operation, a reference point is established at the applicable unwanted emissions limit using a RBW equal to the RBW required by the unwanted emissions specification of the applicable regulatory standard. These reference points measured using the Low and High Channel of operation are identified as fL and fH respectively. The worst-case frequency offset determined in the above methods is added or subtracted from the values of fL and fH to check that the resulting frequencies remain within the band.

The reference point measurements were made at the RF output terminals of the EUT using an attenuator, power splitter and spectrum analyser. The EUT was controlled via the Universal Radio Communication tester R&S CMW500 selecting maximum transmission power of the EUT and different modes of modulation.

TEST SETUP:

1. Frequency Tolerance:

2. Reference Frequency Points fL and fH:

RESULTS:

1. FREQUENCY TOLERANCE:

- Frequency Stability over Temperature Variations:**

LTE Band 12. QPSK MODULATION. BW = 10 MHz.

Temperature (°C)	Frequency Error (Hz)	Frequency Error (ppm)

-30	-1.95	-0.001117479

- Frequency Stability over Voltage Variations.**

LTE Band 12. QPSK MODULATION. BW = 10 MHz.

Battery Supply voltage	Voltage (V)	Frequency Error (Hz)	Frequency Error (ppm)
Vmax	4.37	-0.43	-0.000607774
Vmin(*)	3.23	0.74	0.001045936

(*): Operating end point specified by the manufacturer.

LTE Band 66. QPSK MODULATION. BW = 10 MHz.

Battery Supply voltage	Voltage (V)	Frequency Error (Hz)	Frequency Error (ppm)
Vmax	4.37	-2.90	-0.001661891
Vmin(*)	3.23	-3.45	-0.001977077

(*): Operating end point specified by the manufacturer.

2. REFERENCE FREQUENCY POINTS f_L AND f_H :

The worst-case frequency offsets added or subtracted per band and bandwidth:

LTE Band 12:

	LTE QPSK MODULATION. BW = 10 MHz
f_L (MHz)	699.2390
f_H (MHz)	715.7750

LTE Band 66:

	LTE QPSK MODULATION. BW = 10 MHz
f_L (MHz)	1710.1454
f_H (MHz)	1779.8586

The reference frequency points f_L and f_H stay within the authorized blocks for all the bands above.

Verdict: PASS

Occupied Bandwidth

SPECIFICATION:

FCC §2.1049: Measurements required: Occupied bandwidth.

RSS-Gen Clause 6.7: Occupied bandwidth (or 99% emission bandwidth) and x dB bandwidth.

METHOD:

The occupied bandwidth measurement was performed at the output terminals of the EUT using an attenuator, power splitter and spectrum analyser. The EUT was controlled via the Universal Radio Communication tester R&S CMW500 selecting maximum transmission power of the EUT and different modes of modulation. The 99% occupied bandwidth and the -26 dBc bandwidth were measured directly using the built-in bandwidth measuring option of spectrum analyser.

TEST SETUP:

RESULTS:

LTE Band: The worst case of Occupied Bandwidth corresponds to all Resource Blocks (RB) with Offset 0, regardless the nominal bandwidth selected.

LTE Band 12:

LTE Band 12. QPSK MODULATION. BW = 1.4 MHz.
