

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing the setup for a conducted emission test. On the left, a piece of electronic equipment, likely a spectrum analyzer or a power supply, sits on a light-colored wooden bench. A power strip is plugged into a wall outlet below the bench, and a power cord connects it to a device on the floor. To the right, a large, light-colored wooden table is positioned, with a blue cylindrical object (possibly a probe or a component) lying on its surface. The background is a plain, light-colored wall.
Radiation Emission Test Setup (Below 30MHz)	 A photograph showing the setup for a radiation emission test. The room is lined with white, square-shaped electromagnetic interference (EMI) shields. In the center, a yellow, rectangular object (likely a test item) is placed on a wooden table. A blue cylindrical object is also on the table. In the foreground, a metal frame structure is visible, possibly part of a measurement system. The floor is dark and reflective, with yellow and black striped caution tape marking a circular area around the test item.

**Radiation Emission Test
Setup (30MHz to 1GHz)**

**Radiation Emission Test
Setup (Above 1GHz)**
