

TEST REPORT

Report No.: 8234EU011004W2

Applicant: QUEST USA CORP

Address: 495 Flatbush Ave, Brooklyn, NY 11225, USA

Product Name: Wireless Magnetic Power Bank

Model No.: IJ10191-FB (refer to clause 2.4)

Trademark: IJOY

FCC ID: 2AJQ7POWERBANK1

Test Standard(s): 47 CFR Part 1 Subpart I Section 1.1310

47 CFR Part 2, Subpart J, Section 2.1091

Date of Receipt: Oct. 10, 2024

Test Date: Oct. 10, 2024 – Oct. 17, 2024

Date of Issue: Nov. 29, 2024

2 General Information

2.1 Applicant Information

Applicant	QUEST USA CORP
Address	495 Flatbush Ave, Brooklyn, NY 11225, USA

2.2 Manufacturer Information

Manufacturer	QUEST USA CORP China Office
Address	601 Bld1, Cloud Park, 233 Bulong Road, Longgang, Shenzhen, China 518112

2.3 Factory Information

Factory	QUEST USA CORP China Office
Address	601 Bld1, Cloud Park, 233 Bulong Road, Longgang, Shenzhen, China 518112

2.4 General Description of E.U.T.

Product Name	Wireless Magnetic Power Bank	
Model No. Under Test	IJ10191-FB	
List Model No.	IJ10192-FB, IJ10223-FB, IJAST201-FB, IJAST420-FB, IJ10377-FB, IJ10378-FB, IJ10379-FB, DS20627-KH	
Description of Model differentiation	All models are same with electrical parameters and internal circuit structure, but only differ in appearance color and model name. (this information provided by the customer)	
Rating(s)	Rated Energy: 18.5Wh/3.7V Battery Capacity: 5000mAh Output Capacity: 3300mAh Input Voltage: 5V==2A Type-A Output Voltage: 5V==2A Wireless Charger Output: 5W	
Product Type	☐ Mobile ☐ Portable ☐ Fix Location	
Test Sample No.	-1/2(Normal Sample), -2/2(Engineering Sample)	
Hardware Version	N/A	
Software Version	N/A	
Remark	The above information are declared by the applicant, EU-LAB is not responsible for the information accuracy provided by the applicant. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

2.5 Technical Information of E.U.T.

Network and Wireless Connectivity	Wireless Power Transfer (WPT)
--------------------------------------	-------------------------------

The requirement for the following technical information of the EUT was tested in this report:

	wpt
Technology	WPI
Operating Frequency	110.1-205KHz
Modulation Type	FSK
Antenna Type	Coil Antenna
Antenna Gain(Peak)	0 dBi
Remark	The above information is declared by the applicant, EU-LAB is not responsible for the information accuracy provided by the applicant.

Page 6 of 19 Report No.: 8234EU011004W2

3 Test Summary

3.1 Test Standard

The tests were performed according to following standards:

No.	Identity	Document Title
1	47 CFR Part 1 Subpart I Section 1.1310	Radio frequency radiation exposure limits.
2	47 CFR Part 2, Subpart J, Section 2.1091	Radiofrequency radiation exposure evaluation: mobile devices
3	KDB 680106 D01v04	RF exposure consideration for low power consumer wireless power transfer applications.

Remark:

Maintenance of compliance is the responsibility of the manufacturer. Any modification of the product maybe which result in lowering the emission/immunity should be checked to ensure compliance has been maintained.

3.2 Test Verdict

No.	Description	FCC Part No.	Verdict	Remark
1	RF Exposure Evaluation	FCC 1.1310 FCC 2.1091 KDB 680106 D01 Wireless Power Transfer v04	Pass	

3.3 Test Laboratory

Test Laboratory	Shenzhen EU Testing Laboratory Limited		
Address	101, Building B1, Fuqiao Fourth Area, Qiaotou Community, Fuhai Subdistrict, Baoan District, Shenzhen, Guangdong, China		
Designation Number	CN1368		
Test Firm Registration Number	952583		

Page 7 of 19 Report No.: 8234EU011004W2

4 Test Configuration

4.1 Test Environment

During the measurement, the normal environmental conditions were within the listed ranges:

Relative Humidity	30% to 60%		
Atmospheric Pressure	86 kPa to 106 kPa		
Temperature	NT (Normal Temperature)	+15°C to +35°C	
Working Voltage of the EUT	NV (Normal Voltage)	120 VAC, 60Hz	

4.2 Test Equipment

Equipment	Manufacturer	Model No	Serial No	Cal Date	Cal Due Date
Electric and Magnetic Field Probe - Analyzer	Narda	EHP-200A	EE-405	2024/02/15	2025/02/14

Electric and Magnetic Field Probe - Analyzer EHP-200A detailed parameters are as follows.

Page 8 of 19 Report No.: 8234EU011004W2

4.3 Test Mode

To investigate the maximum EMI emission characteristics generates from EUT, the test system was prescanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned bellow was evaluated respectively.

No.	Description	Remark
TM1	Wireless Output (5W for Phone) + Empty Load	Record
TM2	Wireless Output (5W for Phone) + Half Load	
TM3	Wireless Output (5W for Phone) + Full Load	
TM4	Standby	

Note:

4.4 Measurement Uncertainty

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Test Item	Measurement Uncertainty
Magnetic field measurements(3kHz~10MHz)	±14.6%
Electric field measurements(3kHz~10MHz)	±17.3%

^{1.} All the conditions have been tested. It is found that TM3 is the worst mode, and the data in the report only reflects the worst mode.

Page 9 of 19 Report No.: 8234EU011004W2

5 Test Methodology

5.1 Reference Evaluation Method

- ANSI C95.1-1999: IEEE Standard for Safety Levels with Respect to Human Exposure to Radio Frequency Electromagnetic Fields, 3kHz to 300GHz.
- ♦ FCC KDB publication 680106 D01 RF Exposure Wireless Charging Apps v04: RF Exposure Considerations for Low Power Consumer Wireless Power Transfer Applications
- ♦ FCC CFR 47 Part 1.1310: Radiofrequency radiation exposure limits.
- ♦ FCC CFR 47 Part 2.1093: Radiofrequency radiation exposure evaluation: portable devices
- ♦ FCC CFR 47 Part 18.107: Industrial, Scientific, and Medical Equipment
- April 2024 TCBC Workshop: Part 18 Wireless Power Transfer Devices: Clarifications on KDB 680106v04 and ECR Processes.

5.2 Limit

According to FCC CFR 47 § 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in § 1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of FCC part 2.1093 of this chapter.

TABLE 1 TO § 1.1310(E)(1)—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm ²)	Averaging time (minutes)
	(i) Limit	s for Occupational/Controlled Exposure		
0.3-3.0	614	1.63	*(100)	<u> </u>
3.0-30	1842/f	4.89/f	*(900/f ²)	<
30-300	61.4	0.163	1.0	<
300-1,500			f/300	<
1,500-100,000			5	<
	(ii) Limits for	General Population/Uncontrolled Exposu	re	
0.3-1.34	614	1.63	*(100)	<3
1.34-30	824/f	2.19/f	*(180/f ²)	<3
30-300	27.5	0.073	0.2	<3
300-1,500			f/1500	<3
1,500-100,000			1.0	<3

f = frequency in MHz. * = Plane-wave equivalent power density.

Note 1: Occupational/ controlled exposure limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure.

Note 2: General population/uncontrolled exposure limits apply in situations in which the general public may be exposed, or in which persons who are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

Page 10 of 19 Report No.: 8234EU011004W2

5.3 Test Setup Diagram

3) The values tested by the probe are X, Y and Z on three axes perpendicular to the edge of the device. Top and bottom side coincident with the axis (Y) of the main coil.

Note: The EHP-200A Probe has a diameter of 10.9cm and a radius of 5.45cm.

SHENZHEN EU TESTING LABORATORY LIMITED

Page 11 of 19 Report No.: 8234EU011004W2

5.4 Measurement Procedure

For Portable Exposure Conditions:

- 1) The portable test modes have covered the considerations of the mobile test, only record the test data of the portable conditions in this report.
- 2) Operating modes with client device (1%, 50%, 99% battery status of client device), have been tested, only show the data of worst case of 1% battery status of client device.
- 3) Test performed with all the radiating structures operating at maximum power at the same time.
- 4) E-field and H-field measurements are taken along all three axes the device from 0cm to 20cm in 2cm minimum increment for each edge surface of the host/client pair. If the center of the probe sensing elements is more than 5mm from the probe outer edge, the field strengths need to be estimated for the positions that are not reachable.
- 5) Validation of Field Estimates
- a) If R is the probe radius and the probe tip is in contact with the coil, then the probe center is R cm from the coil surface as bellow picture:

- b) The probe then is measuring the field correctly at R cm from the surface, and only estimating the field at the 0 cm point of contact with the coil surface.
- c) The validation requires showing that the model used to estimate the field provides data within 30% accuracy for at least the two, 2-cm-spaced closest points to where the estimates were made.
- d) If there is only on estimated value, then a single validation point is sufficient.
- e) Validation Example for 4 cm Probe Radius as following Step 1:

Page 12 of 19 Report No.: 8234EU011004W2

Description of the Validation Example for 4 cm Probe Radius

- Assume that R=4 cm. The field at 0 cm can only be estimated, but the field at 4 cm is measured exactly (at the center of the probe)
- Move the probe at 2 cm from the surface. The field at 2 cm can still only be estimated, but the field at 6 cm is measured exactly.
- Compare the estimate with the values at the same positions where the field was measured exactly (i.e. 4 cm and 6 cm)
- The difference between measurements and estimates needs to be no more than 30%.
- The validation of the estimates needs to be for the two closest points to the coil, but at least 2 cm apart (in this case they are). This is to avoid a validation at, say 2 cm and another on at 2.1cm, that is essentially a repetition.
- 6) According to Calibration information and specification about EHP-200A Probe, the probe's sensitive elements center are 8mm below the external surface, and the dimensions is 92*92*109mm, so the actual 0cm field strengths need to be estimated for the positions that are not reachable, only the result of test distance 2cm~20cm was measured value. The Extrapolated Value Calculation Method is described below.

SHENZHEN EU TESTING LABORATORY LIMITED

Page 13 of 19 Report No.: 8234EU011004W2

Length	Width	Height
(mm)	(mm)	(mm)
109	92	

The sensitive elements are located approximately 8 mm below the external surface

Estimated method for portable RF Exposure condition:

We use Biot-Savart formula theory to estimate the strength of the magnetic field that the measuring instrument cannot measure. According to Biot-Savart formula:

Top & Bottom Side:

$$B = \frac{\mu_0 * I * N * R^2}{2 * (R^2 + x^2)^{3/2}}$$

SHENZHEN EU TESTING LABORATORY LIMITED

Page 14 of 19 Report No.: 8234EU011004W2

Front, left, right & rear Side:

$$\mathbf{B} = \frac{\mu_0 * I * N}{2 * x}$$

Where:

B: means H-field value.

 μ_0 : space permeability; u0=4 π *10⁻⁷:

I: A current element passing through a coil:

R: means the Radius of coil;

Test Distance: The distance from the sensing element of the probe to the edge of the device surface

x: means the center of the coil to the sensing elements of the probe. (For top & bottom side: x=test distance.

For other side: x=test distance +R)

N: Number of turns.

The conditions of EUT:

N=10

Page 15 of 19 Report No.: 8234EU011004W2

For validation purposes:

If the value to show a **30% agreement** between the model and the (E-and/or H-Field) probe measurements for the two closest points to the device surface, and with 2cm increments. Then this extrapolation method is reasonable.

Validation:

Magnetic Field Emissions								
Test Distance (cm) Top Bottom Front Rear Left Right Conclusion								
2cm(estimated) (A/m)	0.3359	0.2743	0.2877	0.1183	0.4821	0.3754	Commission	
2cm(measured) (A/m)	0.4051	0.3100	0.3162	0.1209	0.5878	0.4446	Compliance within 30%	
Agreement (%)	18.68	12.22	9.44	2.17	19.76	16.88		

Magnetic Field Emissions								
Test Distance (cm)	Test Distance (cm) Top Bottom Front Rear Left Right							
4cm(estimated) (A/m)	0.2119	0.2048	0.1193	0.1099	0.2706	0.2051	Commission	
4cm(measured) (A/m)	0.2303	0.2274	0.1254	0.1145	0.3242	0.2504	Compliance within 30%	
Agreement (%)	8.32	10.46	4.99	4.10	18.02	19.89	WIGHT 50 70	

Note:

- 1. The percent ratio of agreement is the difference between the estimated and measured values divided by the average of the estimated and measured values.
- 2. EUT is a loop/coil emitting structure, so E-field not required. Just record the H-field value.

Page 16 of 19 Report No.: 8234EU011004W2
