Antenna Gain
Model: WB50

Description
This document provides the antenna gain information for WHOOP WB50, taken directly from the antenna manufacturer's detailed antenna specification for ANT 1 (refer to the operational description exhibits for full details).

Maximum Gain
- **2.86 dBi @ 2470 MHz**

ANT 1 - BLE

Frequency (MHz)	Peak Gain (dBi)
2400	1.61
2410	1.53
2420	1.76
2430	2.19
2440	2.50
2450	2.40
2460	2.59
2470	2.86
2480	2.43

ANT 2 - NFC
Antenna gain values are not required as gain values are not used to demonstrate compliance with Part 15.225. All measurements related to the fundamental signal are made as radiated field strength measurements and compared to the radiated field strength limits.
