Overview

WT32-SC01 is a development board for visual touch screen, the board is equipped with GUI platform firmware developed independently, support graphic drag and drop programming to help users complete the development of customized control platform. The main controller of WT32-SC01 development board adopts esp32-wrover-b module, this module is a general-purpose Wi Fi + Bt + ble MCU module, 4MB SPI flash and 8MB PSRAM are configured in. WT32-SC01 development board can also develop and debug functions such as buttons, voice and camera through the expansion interfaces on both sides, greatly shorten the development cycle of users.

Board Size

As shown in the figure below is the dimension diagram of WT32-SC01 development board, the size of the board is 58mmx91mm, and there are 4.05mm diameter positioning holes at four feet of the board.

Figure 2-1: PCB dimension diagram

Figure 2-2: Physical dimension diagram 1

Figure 2-3: Physical dimension diagram 2

Hardware Resource

The hardware resources of the development board are as follows:

Figure 2 shows the physical front view of the development board. It consists of a 3.5-inch LCD screen with a resolution of 320x480 and a capacitive touch pad, and it Supports two touch.

Figure 3 is the physical figure on the back of the development board, which contains the following hardware resources:

1、ESP32-WROVER-B Module

Esp32-wrever-b is a Wi Fi + Bt + ble MCU module for all kinds of applications. It has powerful functions and wide applications. It can be used in low-power sensor networks and demanding applications, For example, voice coding, audio streaming and MP3 decoding. The parameters of this esp32-wrapper-b are:8Mbyte PSRAM+4Mbyte Flash.

2、TP Interface

Capacitive touchpad interface, I2C interface, 0.5mm spacing, 6pin, flip down type.

3、LCM Display interface

3.5-inch LCM display interface, SPI interface, 0.5mm spacing, 24pin. This SPI interface is connected to the hardware HSPI interface of esp32, the operating clock frequency can reach 80MHz. The screen parameters used are: Size-3.5Inch; Pixel density-165PPI; Resolution:320*RGB*480; Screen model: WT-352215-A2.

4、Power management

Two LDOS of 3.3V output, One supplies power to the board itself, The other supplies power to the external expansion board, The power supply is separated to prevent the expansion board from interfering with the power supply of esp32, it ensures the stability of the esp32.

5、External power interface

Reserved external power interface (positive and negative as shown in + - sign on the figure), input voltage range 5v-9v, maximum load current $I > 2A$.

6、RST Key

Touch the self-reset button to connect to the EN pin of ESP32. This button can be used to reset ESP32.

7、Type-C Interface

Universal USB-C interface (Type-C interface), this interface is used to power the development board, UART communication and firmware download. The hardware of the download circuit implements data flow control, so the firmware download supports one-click automatic download.

8-9、Expansion Board Interface

The interface of the external expansion board can be used for power supply, communication, control, etc. So as to achieve functional expansion to meet the various needs of users. The 8 and 9 interfaces are connected by Pin to Pin, so the circuit connection of the expansion board inserted into the 8 interface and the 9 interface is the same, but only to meet the user's experience of installing the expansion board in different directions. Simultaneously: When the IO of the two expansion boards does not conflict, two expansion boards can be inserted at the same time to achieve two expansion functions. Expansion board interface specifications: 2.0mm pitch, 2X20Pin, can be installed on both sides of the horizontal row. The interface definition is shown in Figure 3-Extended Edition Interface Definition Diagram.

10、Power Indicator

The power indicator (red light) lights up when you plug in the USB cable.

11、UART Communication Indicator

The TXD indicator and RXD indicator in the UART will flash when there is data flow.

Figure 3-1: Front view of WT32-SC01 development board

Figure 3-1: Rear view of WT32-SC01 development board

provides external expansion board. Figure 5 is a schematic diagram of the test points of the power supply of the development board.

Figure 4-1: Schematic diagram of power supply test points of the development board

Board Electrical Parameters

Test environment:

- 1、 Temperature: Room temperature 25 °C
- 2、 Power supply: 5.0V Voltage ripple $V < 100\text{mA}$

Test parameters:

- 1、 Normal working current: 240mA (Average current)
- 2、 Working current under sleep: Less than 18mA (Average current)

Schematic diagram 4

Firmware Burning

1、 Step One:

Connect the WT32-SC01 board to the computer via the USB-TypeC data cable. Since this development board has automatic data flow control processing, the firmware can be automatically downloaded through ESP32 Flash_Download_Tools.

2、 Step Two:

As shown in Figure 7-1 below: Select the firmware path to be burned at 1. The address is usually 0X00. After setting, remember to tick the front; Select the system clock to be 40MHz at 2 locations; Choose the size of Flash as 32Mbit in 3 places; Select SPI MODE as DIO mode at 4 places; Select the port number of the current board recognized by the computer at 5; Select the serial port baud rate at 6 places (the larger the value, the faster the firmware download rate, and the maximum support is 1152000bps); After completing the previous configuration, click at 7 to start burning the firmware.

3、 Step Three:

After completing the above two steps, press the reset button on the back of the development board to start running the firmware just burned.

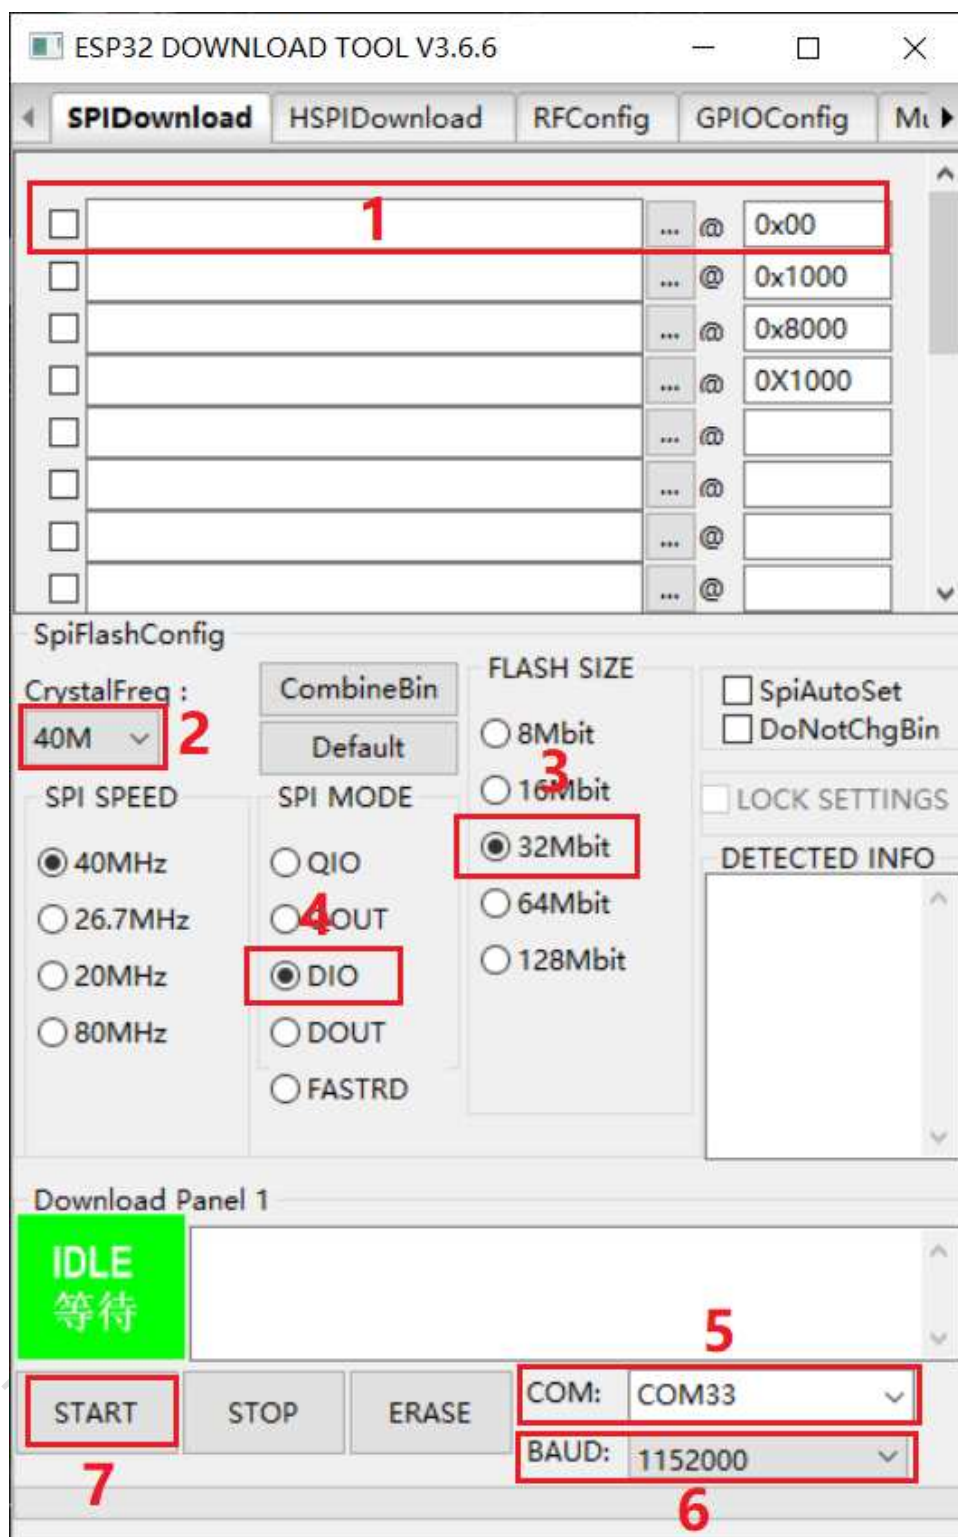

Figure 7-1: Burning instructions

Function Development

1、Screen Brightness Adjustment

As shown in Figure 8-1, GPIO23 of ESP32 is a pin to control the LCD backlight, Users can control the backlight on and off through IO23 or adjust the backlight brightness of the LCD through PWM modulation.

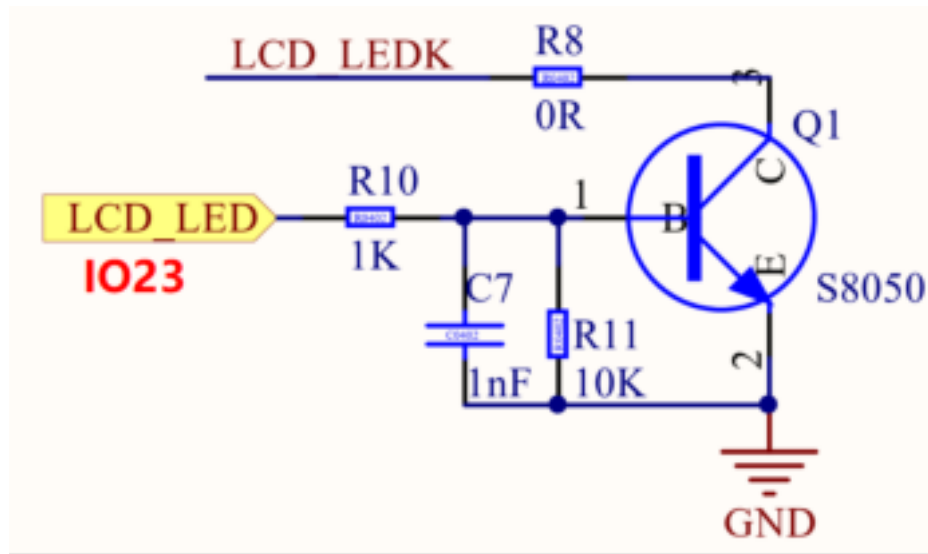

Figure 8-1: LCD backlight control diagram

2、Graphical Interface Development

Users can quickly develop through our online platform, the platform is similar to MIT APP Inventor, it realizes the rapid development of building blocks. At present, the platform has improved the development of graphical interface, more driver code blocks will be continuously improved in the future. The login URL of the online platform is as follows: <http://esp32.8ms.xyz/login>.

Federal Communication Commission Statement (FCC, U.S.)

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

IMPORTANT NOTES

Co-location warning:

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

OEM integration instructions:

This device is intended only for OEM integrators under the following conditions:

The transmitter module may not be co-located with any other transmitter or antenna. The module shall be only used with the external antenna(s) that has been originally tested and certified with this module.

As long as the conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

Validity of using the module certification:

In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization for this module in combination with the host equipment is no longer considered valid and the FCC ID of the module cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

End product labeling:

The final end product must be labeled in a visible area with the following: "Contains Transmitter Module FCC ID: 2AFOS-WT32-SC01".

Information that must be placed in the end user manual:

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module. The end user manual shall include all required regulatory information/warning as show in this manual.

Integration instructions for host product manufacturers according to KDB 996369 D03 OEM Manual v01

2.2 List of applicable FCC rules

FCC Part 15 Subpart C 15.247 & 15.207 & 15.209

2.3 Specific operational use conditions

The module is a Bluetooth module with WiFi & BR&EDR & BLE 2.4G function.

WiFi Specification:

Operation Frequency: 2412~2462MHz

Number of Channel: 11

Modulation: DSSS, OFDM

Type: PCB Antenna

Gain: 1 dBi

BR&EDR Specification:

Operation Frequency: 2402~2480MHz

Number of Channel: 79

Modulation: GFSK, $\pi/4$ -DQPSK, 8DPSK

Type: PCB Antenna

Gain: 1 dBi

BLE Specification:

Operation Frequency: 2402~2480MHz

Number of Channel: 40

Modulation: GFSK

Type: PCB Antenna

Gain: 1 dBi

The module can be used for mobile or applications with a maximum 1dBi antenna. The host manufacturer installing this module into their product must ensure that the final composite product complies with the FCC requirements by a technical assessment or evaluation to the FCC rules, including the transmitter operation. The host manufacturer has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module. The end user manual shall include all required regulatory information/warning as shown in this manual.

2.4 Limited module procedures

Not applicable.

2.5 Trace antenna designs

Not applicable. The module has its own antenna, and doesn't need a host's printed board microstrip trace antenna etc.

2.6 RF exposure considerations

The module must be installed in the host equipment such that at least 20cm is maintained between the antenna and users' body; and if RF exposure statement or module layout is changed, then the host product manufacturer required to take responsibility of the module through a change in FCC ID or new application. The FCC ID of the module cannot be used on the final product. In these circumstances, the host manufacturer will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization

2.7 Antennas

Antenna Specification are as follows:

Type: PCB Antenna

Gain: 1 dBi

This device is intended only for host manufacturers under the following conditions:

The transmitter module may not be co-located with any other transmitter or antenna;

The module shall be only used with the internal antenna(s) that has been originally tested and certified with this module. The antenna must be either permanently attached or employ a 'unique' antenna coupler.

As long as the conditions above are met, further transmitter test will not be required. However, the host manufacturer is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

2.8 Label and compliance information

Host product manufacturers need to provide a physical or e-label stating “Contains Transmitter Module FCC ID: 2AFOS-WT32-SC01” with their finished product.

2.9 Information on test modes and additional testing requirements

BR&EDR

Operation Frequency: 2402~2480MHz
Number of Channel: 79
Modulation: GFSK, $\pi/4$ -DQPSK, 8DPSK

BLE

Operation Frequency: 2402~2480MHz
Number of Channel: 40
Modulation: GFSK

WIFI

Operation Frequency: 2412~2462MHz
Number of Channel: 11
Modulation: DSSS, OFDM

Host manufacturer must perform test of radiated & conducted emission and spurious emission, etc according to the actual test modes for a stand-alone modular transmitter in a host, as well as for multiple simultaneously transmitting modules or other transmitters in a host product. Only when all the test results of test modes comply with FCC requirements, then the end product can be sold legally.

2.10 Additional testing, Part 15 Subpart B disclaimer

The modular transmitter is only FCC authorized for FCC Part 15 Subpart C 15.247 & 15.207 & 15.209 and that the host product manufacturer is responsible for compliance to any other FCC rules that apply to the host not covered by the modular transmitter grant of certification. If the grantee markets their product as being Part 15 Subpart B compliant (when it also contains unintentional-radiator digital circuitry), then the grantee shall provide a notice stating that the final host product still requires Part 15 Subpart B compliance testing with the modular transmitter installed.
