

EMI Test Report

Tested in accordance with
Federal Communications Commission (FCC)
Personal Communications Services
CFR 47, Parts 2, 22 and 24
and
Industry Canada, RSS-133 and RSS-129

Research In Motion Limited

REPORT NO.: RIM-0060-0309-02

PRODUCT MODEL NO: RAN21CN
TYPE NAME: BlackBerry Wireless Handheld
FCC ID: L6ARAN21CN
IC: 2503A-RAN21CN

Date: _____ 25 November 2003 _____

Declaration**Statement of Performance:**

The BlackBerry Wireless Handheld, model RAN21CN ASY-06708-001 when configured and operated per RIM's operation instructions, performs within the requirements of the test standards.

Declaration:

We hereby certify that:

The test data reported herein is an accurate record of the performance of the sample(s) tested.

The test equipment used was suitable for the tests performed and within the manufacturers published specifications and operating parameters.

The test methods were consistent with the methods described in the relevant standards.

A) Scope

This report details the results of compliance tests which were performed in accordance to the requirements of:

FCC CFR 47 Part 2, Oct. 1, 2000

FCC CFR 47 Part 22, Subpart H, Cellular Radiotelephone Services, Oct. 1, 2000

FCC CFR 47 Part 24 Subpart E, Broadband PCS, Oct 1. 2000

Industry Canada, RSS-129 Issue 2, Sept. 25/99, 800 MHz Dual-Mode CDMA Cellular Telephones

Industry Canada, RSS-133 Issue 2, Rev. 1 Nov. 6/1999, 2.0 GHz Personal Communications Services

B) Product Identification

The equipment under test (EUT) was tested at the Research In Motion (RIM) EMI test facility, located at:

305 Phillip Street

Waterloo, Ontario

Canada, N2L 3W8

Phone: 519 888 7465

Fax: 519 888 6906

Web Site: www.rim.net

The testing began on November 6, 2003 and completed on November 23, 2003. The sample equipment under test (EUT) included:

- 1a BlackBerry Wireless Handheld, model number RAN21CN, ASY-06708-001, identification number E2PRF08, FCC ID L6ARAN21CN, IC: 2503A-RAN21CN.
- 1b BlackBerry Wireless Handheld, model number RAN21CN, ASY-06708-001, identification number E2PRF05, FCC ID L6ARAN21CN, IC: 2503A-RAN21CN.

The transmit frequency bands for the Handheld are: Cellular 824 to 849 MHz and PCS 1850 to 1910 MHz.

C) Support Equipment Used for the Testing of the EUT

- 1) Agilent Wireless Communication Test Set, model 8960, serial number US41070110
- 2) Agilent Wireless Communication Test Set, model 8960, serial number 6B41070272
- 3) DC Power Supply, H/P, model 6632B, serial number US37472178

D) Test Voltage

The ac input voltage was 120 volts, 60 Hz where applicable. This configuration was per RIM's specifications.

E) Test Results Chart

SPECIFICATION	Test Type	MEETS REQUIREMENTS	Performed By
FCC CFR 47 Part 22, Subpart H IC RSS-129	Radiated Spurious/harmonic Emissions, ERP, LO	Yes	Masud Attayi
FCC CFR 47 Part 22, Subpart H IC RSS-129	Conducted Emissions, Occupied Bandwidth, Frequency Stability	Yes	Maurice Battler
FCC CFR 47 Part 24, Subpart E IC RSS-133	Radiated Spurious/harmonic Emissions, EIRP, LO	Yes	Masud Attayi
FCC CFR 47 Part 24, Subpart E IC RSS-133	Conducted Emissions, Occupied Bandwidth, Frequency Stability	Yes	Maurice Battler

F) Modifications to EUT

No modifications were required to the EUT.

G) Summary of Results

- 1) The EUT passed the Conducted Spurious Emissions requirements in the Cellular band as per 47 CFR 22.917, CFR 22.901(d) and RSS-129. The EUT was measured on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz.
See APPENDIX 1 for the test data.
- 2) The EUT passed the Conducted Spurious Emissions requirements in the PCS band as per 47 CFR 2.1057, CFR 24.238 and RSS-133. The EUT was measured on the low, middle and high channels. The frequency range investigated was from 10 MHz to 20 GHz.
See APPENDIX 1 for the test data.
- 3) The EUT passed the Occupied Bandwidth requirements in the Cellular band as per 47 CFR 2.202, CFR 22.917 and RSS-129. The channels measured were low, middle and high.
See APPENDIX 1 for the test data.
- 4) The EUT passed the Occupied Bandwidth and channel mask requirements in the PCS band as per 47 CFR 2.202, CFR 24.238 and RSS-133. The channels measured were low, middle and high.
See APPENDIX 1 for the test data.
- 5) The EUT passed the Conducted RF Output Power requirements for both the Cellular and PCS bands. The channels measured were low, middle and high.
See APPENDIX 2 for the test data.
- 6) The EUT passed the Frequency Stability vs. Temperature and Voltage requirements for Cellular band as per 22.917 and RSS-129.
The maximum frequency error measured was less than 0.1 ppm.
The temperature range was from -30°C to +60°C in 10° temperature steps. The EUT was measured on low, middle and high channels at each temperature step. The EUT was measured at low (3.5 volts), nominal (3.8 volts) and high (4.1 volts) dc input voltage at each temperature step and channel at maximum output power.
See APPENDIX 3 for the test data.
- 7) The EUT passed the Frequency Stability vs. Temperature and Voltage requirements for the PCS band as per 24.235 and RSS-133. The maximum frequency error measured was less than 0.1 ppm.
The temperature range was from -30°C to +60°C in 10 degree temperature steps. The EUT was measured on low, middle and high channels at each temperature step. The EUT was measured at low (3.5 volts), nominal (3.8 volts) and high (4.1 volts) dc input voltage at each temperature step and channel at maximum output power.
See APPENDIX 3 for the test data.

- 8) The radiated spurious emissions/harmonics and ERP/EIRP were measured for both Cellular and PCS bands. The results are within the limits. The EUT was placed on a nonconductive wooden table, 80 cm high plus 20 cm high styrofoam on top of the table which was positioned on a remotely rotatable turntable. The EUT height of one metre was set in order to align it with the lowest height of the receiving antenna. The test distance used between the EUT and the receiving antenna was three metres. At this point the emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The turntable was rotated to determine the azimuth of the peak emissions. The maximum emissions level was recorded. The measurements were performed in a semi-anechoic chamber. The semi-anechoic chamber FCC registration number is **778487** and the Industry Canada file number is **IC4240**. The EUT was measured on the low, middle and high channels.

The highest ERP in the Cellular band measured was 25.8 dBm at 837.49 MHz (channel 417).
The highest EIRP in the PCS band measured was 24.8 dBm at 1880.00 MHz (channel 600).
To view the test data see APPENDIX 4.

The radiated carrier harmonics were measured up to the 10th harmonic for low, middle and high channels in the Cellular and PCS bands.
The Cellular radiated carrier harmonic emissions were in the noise floor (NF).
The lowest test margin for the PCS band was 20.2 dB below the limit at 3760.0 MHz.
To view the test data see APPENDIX 4.

The EUT's RF local oscillator emissions were measured in the Cellular band on the low, middle and high channels (1013, 417 and 777) in the standalone upright position. Both the horizontal and vertical polarizations were measured. The Cellular RF local oscillator emissions were in the NF.

The EUT's RF local oscillator emissions were measured in the PCS band on the low, middle and high channels (25, 600 and 1175) in the standalone upright position. Both the horizontal and vertical polarizations were measured. The PCS RF local oscillator emissions were in the NF.

Sample Calculation:

Field Strength (dB μ V/M) is calculated as follows:

$$FS = \text{Measured Level (dB}\mu\text{V)} + \text{A.F. (dB/m)} + \text{Cable Loss (dB)} - \text{Preamp (dB)} + \text{Filter Loss (dB)}$$

Measurement Uncertainty ± 4.0 dB

Conducted Emission Test Data Cont'd

The conducted spurious emissions – As per 47 CFR 2.202, 47 CFR 2.1057, 47 CFR 24.238, RSS-133, CFR 22 Subpart H and RSS-129 were measured from 10 MHz to 20 GHz. The EUT emissions were in the noise floor.

See figures 1 to 12 for the plots of the conducted spurious emissions.

Test Data for Cellular and PCS selected Frequencies

Cellular Frequency (MHz)	-99% Occupied Bandwidth (MHz)
824.700	1.269
836.520	1.269
848.310	1.288

PCS Frequency (MHz)	99% Occupied Bandwidth (MHz)
1851.200	1.280
1880.000	1.290
1908.750	1.290

Measurement Plots for Cellular and PCS

Refer to the following measurement plots for more detail.

See Figures 1 to 12 for plots of the Spurious Emission results

See Figures 13 to 18 for the plots of the 99% Occupied Bandwidth.

See Figures 19 to 20 for plots of the channel mask results.

The RF power output was at maximum for all the recorded measurements shown below.

APPENDIX 2

CONDUCTED RF OUTPUT POWER TEST DATA

Conducted RF Output Power Test Data

The conducted RF output power was measured using the Agilent Wireless Communication Test Set, model 8960. Low, middle and high channels were measured at maximum radio output power. Peak nominal output power is 24.5 dBm for Cellular and 23.0 dBm for PCS.

Test results

Channel	Frequency (MHz)	Maximum Output Power (dBm)
<u>Cellular</u>		
1013	824.700	24.30
384	836.520	24.60
777	848.310	24.70
<u>PCS</u>		
25	1851.200	23.30
600	1880.000	23.40
1175	1908.750	23.35

Part 2 Required Measurements

2.995 Frequency Stability - Procedures

(a,b) Frequency Stability - Temperature Variation

(d) Frequency Stability - Voltage Variation

24.235 Frequency Stability.

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

Report No. RIM-0060-0309-02

Test Date: November 06 to 23, 2003

The RAN21CN handheld, (referred as EUT herein and after) transmitted frequencies are less than 0.1 ppm of the received frequency from the Agilent, Wireless Communication Test Set.

The EUT meets the requirements as stated in CFR 47 chapter 1, Section 24.235, RSS-133, CFR 47 chapter 1, Section 22.917 and RSS-129 Frequency Stability.

Frequency Stability measurement devices were configured as presented in the block diagram recording frequency, power, data, temperatures, and stepped voltages controlled via a GPIB interface linked to the Environmental chamber, a DC power supply, and the Communications Test Set. A 0.9-meter coax cable was calibrated to characterize the insertion loss for the transmitted frequencies between the RF input/output of the Wireless Communication Test Set and the EUT antenna port; located inside the environmental chamber.

Calibration for the Cable Loss was performed in the RF Laboratory on November 06, 2003

Procedure:

Full_ Two port Calibration of 8720D using the 85033D was completed.

The cable assembly from the RF input to the RF output was measured at the following Frequencies:

PCS Frequency (MHz)	Cable loss (dB)	Cellular Frequency (MHz)	Cable loss (dB)
1851.20	1.26	824.70	0.83
1880.00	1.26	836.52	0.83
1908.75	1.26	848.31	0.83

Procedure:

The EUT was placed in the Temperature chamber and connected to Wireless Communication Test Set outside as shown in the figure above. Dry air was pumped inside the temperature chamber to maintain a backpressure during the test. The EUT was kept in the off condition at all times except when the measurements were to be made.

The chamber was switched on and the temperature was set to -30°C.

After the chamber stabilized at -30°C there was a soak period of one hour to alleviate moisture in the chamber, the EUT voltage was enabled.

The system software recorded the frequency, power, and associated measurements.

A Computer system controlled the automated software. This application was given the command of activating all machines intrinsic to the temperature and voltage tests controlling the Wireless Communication Test Set via the GPIB Bus. The Environmental Chamber was instructed through an RS-232 serial line. The EUT dialogue was passed through a serial connection.

The EUT repetitively transmitted 100 bursts for each set of programmed parameters recording temperature, voltage settings, and systematically selected frequencies. The power supply was cycled from minimum voltage 3.5 volts, to 3.8 volts to 4.1 volts nominal voltage.

The frequency error was measured at a maximum output power and recorded by the automated system test software.

The EUT frequency was measured at 3.5 volts, 3.8 volts and 4.1 volts. The transmit frequency was varied in 3 steps consisting of 824.70, 836.52, and 848.31 MHz for the cellular band and 1851.20, 1880.00 and 1908.75 MHz for the PCS band. This frequency was recorded in MHz and deviation from nominal, in Parts Per Million.

After the initial one-hour soak at the beginning of the start of the measurement tests, a period of thirty minutes soak was initialized between each ascending temperature step, before proceeding to the next measurement test cycle.

PROCEDURE:

The test system software for commencing the Frequency Stability Tests carried through the following cycle.

1. Switch on the HP 6632B power supply; Wireless Communication Test Set, and Environmental Chamber.
2. Start test program
3. Set the Temperature to –30 degrees Celsius and maintain a period of one- hour soak time, with the EUT supply voltage disabled.
4. Set power supply voltage to 3.5 Volts.
5. Set up Wireless Communication Test Set.
6. Command the Wireless Communication Test Set to switch to the low channel.
7. Enable the voltage to the EUT, and connect a link to the Wireless Communication Test Set.
8. EUT is commanded to Transmit 100 Bursts.
9. Software logs the following data from the Wireless Communication Test Set, power supply and temperature chamber: Traffic Channel Number, Traffic Channel Frequency, Power Level, Chamber Temperature, Supply Voltage, Power, Frequency Error.
10. The Wireless Communication Test Set commands the EUT to change frequency to the middle channel and high channel and repeats steps 7 to 9.
11. Repeat steps 5 to 10 changing the supply voltage to 3.8 Volts
12. Increase temperature by 10 degrees Celsius and soak for 1/2 hour.
13. Repeat steps 4 - 12 for temperatures –30 degrees to 60 degrees Celsius.
14. Repeat steps 5 to 10 changing the supply voltage to 4.1 Volts

Procedure 5 to 10 was repeated at room temperature (20 degrees Celsius) with the power supply voltage set to 3.5, 3.8 and 4.1 Volts.
