### 5.3 Test Procedure & Measurement Data

#### 5.3.1 Radiated Emissions

<b>Test Requirement:</b>	FCC Part15 C Section 15.227
<b>Test Method:</b>	ANSI C63.4
<b>Test Date:</b>	30 December 2005
<b>Measurement Distance:</b>	3m (Semi-Anechoic Chamber)
<b>Requirements:</b>	Carrier frequency will not exceed 80dBuV/m AT 3m. Out of band emissions shall not exceed: 40.0 dBuV/m between 30MHz & 88MHz 43.5 dBuV/m between 88MHz & 216MHz 46.0 dBuV/m between 216MHz & 960MHz 54.0 dBuV/m above 960MHz
<b>Detector:</b>	Peak Scan (120kHz resolution bandwidth)

Test Procedure: The procedure used was ANSI Standard C63.4-2003. The receive was scanned from 30MHz to 1000MHz. When an emission was found, the table was rotated to produce the maximum signal strength. An initial pre-scan was performed for in peak detection mode using the receiver. The EUT was measured for both the Horizontal and Vertical polarities and performed a pre-test three orthogonal planes. The worst case emissions were reported.

An initial pre-scan was performed in the 3m chamber using the spectrum analyser in peak detection mode. Quasi-peak measurements were conducted based on the peak sweep graph. The EUT was measured by Bilog antenna with 2 orthogonal polarities

The following measurements were performed on the EUT on 30 December 2005:  
Test the EUT in transmitting mode.

**27.145MHz Mode.**

Intentional emission

Test Frequency (MHz)	Peak (dB $\mu$ V/m)			Limits (dB $\mu$ V/m)	Margin (dB)		
	X	Y	Z		X	Y	Z
27.145	74.6	69.1	74.5	100.0	25.4	30.9	25.5

Test Frequency (MHz)	Peak (dB $\mu$ V/m)			Limits (dB $\mu$ V/m)	Margin (dB)		
	X	Y	Z		X	Y	Z
27.145	66.3	61.8	66.1	100.0	33.7	38.2	33.9

Other emissions

Test Frequency (MHz)	Quasi-Peak (dB $\mu$ V/m)		Limits (dB $\mu$ V/m)	Margin (dB)	
	Vertical	Horizontal		Vertical	Horizontal
54.290	10.68	9.05	40.0	29.32	30.95

162.870	7.98	4.50	43.5	35.52	39.00
190.015	8.72	5.74	43.5	34.78	37.76

244.305	9.00	6.39	46.0	37.00	39.61

Remark:

According to 15.35 (b) When average radiated emission measurements are specified in the regulations, including emission measurements below 1000 MHz, there is also a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit for the frequency being investigated unless a different peak emission limit is otherwise specified in the rules, e.g., see Section 15.255.

**Test Results: The unit does meet the FCC Part 15 C Section 15.227 requirements.**

### 5.3.2 Occupied Bandwidth

Test Requirement:

FCC Part 15 C Section 15.215 (C) and Section 15.235.

Test Method:

ANSI C63.4

Operation within the band 26.960 – 27.280 MHz .

Test Date:

30 December 2005

**26.960 – 27.280 MHz Mode.**

Requirements:

Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission is contained within the frequency band designated in the rule section under which the equipment is operated. The requirement to contain the 20 dB bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If a frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.

Method of measurement:

The useful radiated emission from the EUT was detected by the spectrum analyser with peak detector. The vertical Scale is set to 10dB per division. The horizontal scale is set to 32KHz per division.

Date: 30.DEC.2005 14:54:34

**The results: The unit does meet the FCC Part 15 C Section 15.215 requirements**
