

Operation Description

The 1/24 Bobble Head RC Car is powered by 4 X 1.5V “AA” size battery. When it power on, it can receive the forward, backward, turn left and turn right radio signal and go difference direction.

Refer to the circuit design, the circuit description is listed as below:

- ❑ Q1 and associate circuit act as super regenerative circuit.
- ❑ IC2 and associate circuit act as decoder.
- ❑ Q14 and associate circuit act as voltage regulator.
- ❑ Q8~Q13 and associate circuit act as forward & backward motor control.
- ❑ Q2~Q7 and associate circuit act as turn left & turn right motor control.
