RF Exposure Report

Report No.: SABFPI-WTW-P21123561

FCC ID: SWX-AF60LR

Test Model: AF60-LR

Received Date: 2022/1/6

Test Date: 2022/1/24

Issued Date: 2022/2/18

Applicant: Ubiquiti Inc.

Address: 685 Third Avenue, New York, New York 10017 USA

Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch Hsin Chu Laboratory

Lab Address: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300, Taiwan

Test Location: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300, Taiwan

FCC Registration / Designation Number: 723255 / TW2022

Table of Contents

Release Control Record

Issue No.	Description	Date Issued
SABFPI-WTW-P21123561	Original release.	2022/2/18

1   Certificate of Conformity

Product: airFiber 60 LR

Brand: UBIQUITI

Test Model: AF60-LR

Sample Status: Engineering sample

Applicant: Ubiquiti Inc.
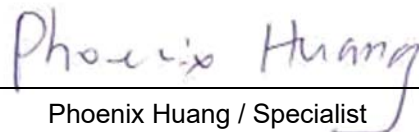

Test Date: 2022/1/24

Standards: FCC Part 2 (Section 2.1091)

KDB 447498 D01 General RF Exposure Guidance v06

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

2 RF Exposure

2.1 Limits for Maximum Permissible Exposure (MPE)

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm^2)	Average Time (minutes)
Limits For General Population / Uncontrolled Exposure				
0.3-1.34	614	1.63	(100)*	30
1.34-30	824/f	2.19/f	(180/f^2)*	30
30-300	27.5	0.073	0.2	30
300-1500	…	…	f/1500	30
1500-100,000	…	…	1.0	30

f = Frequency in MHz ; *Plane-wave equivalent power density

2.2 MPE Calculation Formula

Pd = (Pout*G) / (4*pi*r^2)

where

Pd = power density in mW/cm^2

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

2.3 Classification

The antenna of this product, under normal use condition, is at least 110 cm away from the body of the user.

2.4 Calculation Result

For WiGig (60GHz) of channels frequency after 64.8GHz and Bluetooth data was copied from the original test report (Report No.: SA200312E01)

Operation Mode	Evaluation Frequency (MHz)	Max. Avg. EIRP (dBm)	Max. EIRP (mW)	Distance (cm)	Power Density (mW/cm^2)	Limit (mW/cm^2)	Pass/Fail
Bluetooth	2480	7.09	5.117	110	0.00003	1	Pass
WiGig (after 64.8GHz)	69120	51.25	133352.1432	110	0.87701	1	Pass
WiGig (before 64.8GHz)	60480	51.2	131825.6739	110	0.41496	1	Pass

Note: Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

Conclusion:

The formula of calculated the MPE is:

CPD1 / LPD1 + CPD2 / LPD2 + ……etc. < 1

CPD = Calculation power density

LPD = Limit of power density

Bluetooth + WiGig = 0.00003 / 1 +0.87701 / 1 = 0.87704

Therefore the maximum calculations of above situations are less than the "1" limit.
