American TCB

Dear ATCB,

The purpose of this letter is to explain the changes in the ZM4e radio device, FCC ID I28RFID-M4E-01. The changes are as follows.

- All components in the device were converted to the RoHS equivalent. The values and manufactures did not change, with the exception of the component described in a separate document provided by ThingMagic. Please refer to the document package provided by ThingMagic for details. RoHS conversion involves the removal of hazardous materials within the components. Verification testing was performed to ensure the same performance as the original.
- A new Protocol was added. The new protocol affects the bandwidth of the transmitted signal. Verification testing was performed to ensure that the new protocol met all the technical requirements of CFR 47 Part 15.247. This addition has no affect on power levels.

Regards,

A handwritten signature in blue ink, appearing to read "Gus Medina".
