

# FCC Report

**Applicant:** FLYSKY RC MODEL TECHNOLOGY CO., LTD

**Address of Applicant:** West building3, Huangjianyuan Ind, Park QIAOLI North Gate  
Changping Town Dongguan China

**Equipment Under Test (EUT)**

Product Name: 2.4GHz 6 CHANNELS RECEIVER

Model No.: FS-iA6B

**FCC ID:** N4ZFLYSKYIA6B

**Applicable standards:** FCC CFR Title 47 Part 15 Subpart C Section 15.247:2014

**Date of sample receipt:** March 16, 2015

**Date of Test:** March 16-23, 2015

**Date of report issued:** March 23, 2015

**Test Result :** PASS \*

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Robinson Lo  
Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the GTS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of GTS or testing done by GTS in connection with, distribution or use of the product described in this report must be approved by GTS in writing.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

## 4 Test Summary

### 4.1 Test Item

| Test Item                        | Section           | Result |
|----------------------------------|-------------------|--------|
| Antenna Requirement              | 15.203/15.247 (c) | Pass   |
| AC Power Line Conducted Emission | 15.207            | N/A    |
| Conducted Peak Output Power      | 15.247 (b)(1)     | Pass   |
| 20dB Occupied Bandwidth          | 15.247 (a)(1)     | Pass   |
| Carrier Frequencies Separation   | 15.247 (a)(1)     | Pass   |
| Hopping Channel Number           | 15.247 (a)(1)     | Pass   |
| Dwell Time                       | 15.247 (a)(1)     | Pass   |
| Radiated Emission                | 15.205/15.209     | Pass   |
| Band Edge                        | 15.247(d)         | Pass   |

Pass: The EUT complies with the essential requirements in the standard.

### 4.2 Maximum Measurement Uncertainty

| Parameter                      | Uncertainty |
|--------------------------------|-------------|
| 20dB Occupied Bandwidth        | ±5 %        |
| RF output power                | ±1.5 dB     |
| Unwanted Emissions, conducted  | ±3 dB       |
| All emissions, radiated        | ±6 dB       |
| Hopping Channel Number         | N/A         |
| Carrier Frequencies Separation | N/A         |

## 5 General Information

### 5.1 Client Information

|                          |                                                                                         |

| Address of Factory:      | West building3, Huangjianyuan Ind, Park QIAOLI North Gate Changping Town Dongguan China |

### 5.2 General Description of EUT

|                        |                                       |
|------------------------|---------------------------------------|
| Product Name:          | 2.4GHz 6 CHANNELS RECEIVER            |
| Model No.:             | FS-ia6B                               |
| Operation Frequency:   | 2405.5MHz~2475.0MHz                   |
| Channel numbers:       | 140                                   |
| Modulation technology: | GFSK                                  |
| Antenna Type:          | Integral Antenna                      |
| Antenna gain:          | 2dBi                                  |
| Power supply:          | DC 4.0-6.5V(4*1.5V "AA" Size Battery) |

Remark: The system works in the frequency range of 2405.5MHz to 2475MHz. This band has been divided to 140 independent channels. Each radio system uses 16 different channels, the minimum channel separation is  $\geq 1$ MHz. By using various switch-on times, hopping scheme and channel frequencies, the system can guarantee a jamming free radio transmission. The channel list is below.

| Operation Frequency each of channel |                 |         |                 |         |                 |         |                 |
|-------------------------------------|-----------------|---------|-----------------|---------|-----------------|---------|-----------------|
| Channel                             | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) | Channel | Frequency (MHz) |
| 1                                   | 2405.50         | 36      | 2423.00         | 71      | 2440.50         | 106     | 2458.00         |
| 2                                   | 2406.00         | 37      | 2423.50         | 72      | 2441.00         | 107     | 2458.50         |
| 3                                   | 2406.50         | 38      | 2424.00         | 73      | 2441.50         | 108     | 2459.00         |
| 4                                   | 2407.00         | 39      | 2424.50         | 74      | 2442.00         | 109     | 2459.50         |
| 5                                   | 2407.50         | 40      | 2425.00         | 75      | 2442.50         | 110     | 2460.00         |
| 6                                   | 2408.00         | 41      | 2425.50         | 76      | 2443.00         | 111     | 2460.50         |
| 7                                   | 2408.50         | 42      | 2426.00         | 77      | 2443.50         | 112     | 2461.00         |
| 8                                   | 2409.00         | 43      | 2426.50         | 78      | 2444.00         | 113     | 2461.50         |
| 9                                   | 2409.50         | 44      | 2427.00         | 79      | 2444.50         | 114     | 2462.00         |
| 10                                  | 2410.00         | 45      | 2427.50         | 80      | 2445.00         | 115     | 2462.50         |
| 11                                  | 2410.50         | 46      | 2428.00         | 81      | 2445.50         | 116     | 2463.00         |
| 12                                  | 2411.00         | 47      | 2428.50         | 82      | 2446.00         | 117     | 2463.50         |
| 13                                  | 2411.50         | 48      | 2429.00         | 83      | 2446.50         | 118     | 2464.00         |
| 14                                  | 2412.00         | 49      | 2429.50         | 84      | 2447.00         | 119     | 2464.50         |

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

| Channel             | Frequency |
|---------------------|-----------|
| The lowest channel  | 2405.5MHz |
| The middle channel  | 2440.0MHz |
| The Highest channel | 2475.0MHz |

## 5.3 Test mode

|                                                           |                                    |
|-----------------------------------------------------------|------------------------------------|
| Transmitting mode                                         | Keep the EUT in transmitting mode. |
| <i>Remark: During the test, the new battery was used.</i> |                                    |

## 5.4 Test Facility

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Test mode:        | Refer to section 5.3 for details                                                                                                                                                                                                                                                                                       |
| Test results:     | Pass                                                                                                                                                                                                                                                                                                                   |

### Measurement Data

| Frequency | Ton (ms) | Dwell time(ms) | Limit(ms) | Result |
|-----------|----------|----------------|-----------|--------|
| 2.4055GHz | 1.310    | 8.384          | 400       | Pass   |
| 2.440GHz  | 1.315    | 8.416          | 400       | Pass   |
| 2.475GHz  | 1.315    | 8.416          | 400       | Pass   |

The formula as below:

2405.5MHz: Dwell time = Ton \* Ton times in 1s \* 0.4s \* channel numbers=1.310ms\*1\*0.4\*16=8.384ms

2440MHz: Dwell time = Ton \* Ton times in 1s \* 0.4s \* channel numbers=1.315ms\*1\*0.4\*16=8.416ms

2475MHz: Dwell time = Ton \* Ton times in 1s \* 0.4s \* channel numbers=1.315ms\*1\*0.4\*16=8.416ms

Test plot as follows:

|            |           |

## 6.7 Band Edge

### 6.7.1 Conducted Emission Method

|                   |                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Test Requirement: | FCC Part15 C Section 15.247 (d)                                                                                                                                                                                                                                                                                                                                                         |
| Test Method:      | DA 00-705, ANSI C63.10:2009                                                                                                                                                                                                                                                                                                                                                             |
| Receiver setup:   | RBW=100kHz, VBW=300kHz, Detector=Peak                                                                                                                                                                                                                                                                                                                                                   |
| Limit:            | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Test setup:       |  <p>The diagram illustrates the test setup. A Spectrum Analyzer is connected to an E.U.T. (Equipment Under Test) via a red cable. Both the Spectrum Analyzer and the E.U.T. are placed on a Non-Conducted Table. The table is supported by a Ground Reference Plane.</p>                             |
| Test Instruments: | Refer to section 5.8 for details                                                                                                                                                                                                                                                                                                                                                        |

| Test setup:           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |                    |      |               |
| Test Procedure:       | <div>1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.</div> <div>2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</div> <div>3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</div> <div>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.</div> <div>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</div> <div>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</div> |          |                    |      |               |
| Test Instruments:     | Refer to section 5.8 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |                    |      |               |
| Test mode:            | Refer to section 5.3 for details                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |                    |      |               |

### Remark:

1. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

**Remark:**

1. Final Level =Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor
2. The emission levels of other frequencies are very lower than the limit and not show in test report.

## 6.8 Spurious Emission

### 6.8.1 Conducted Emission Method

|                   |                                                                                                                                                                                                                                                                                                                                                                                         |

| Test Requirement: | FCC Part15 C Section 15.247 (d)                                                                                                                                                                                                                                                                                                                                                         |
| Test Method:      | ANSI C63.10:2009                                                                                                                                                                                                                                                                                                                                                                        |
| Limit:            | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |
| Test setup:       |  <p>The diagram illustrates the test setup. A Spectrum Analyzer is connected to an E.U.T. (Equipment Under Test) via a red cable. Both the Spectrum Analyzer and the E.U.T. are placed on a Non-Conducted Table. The table is supported by a Ground Reference Plane.</p>                             |
| Test Instruments: | Refer to section 5.8 for details                                                                                                                                                                                                                                                                                                                                                        |
| Test mode:        | Refer to section 5.3 for details                                                                                                                                                                                                                                                                                                                                                        |
| Test results:     | Pass                                                                                                                                                                                                                                                                                                                                                                                    |

Test channel:

30MHz~10GHz

Lowest channel

10GHz~25GHz

Test channel:

30MHz~10GHz

Middle channel

10GHz~25GHz

Test channel:

30MHz~10GHz

Highest channel

10GHz~25GHz

## 6.8.2 Radiated Emission Method

|                                |                                                                                                                                            |              |         |                      |            |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|--------------|---------|----------------------|------------|
| Test Requirement:              | FCC Part15 C Section 15.209                                                                                                                |              |         |                      |            |
| Test Method:                   | ANSI C63.4: 2009                                                                                                                           |              |         |                      |            |
| Test Frequency Range:          | 9kHz to 25GHz                                                                                                                              |              |         |                      |            |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>Test Procedure:</p>   | <ol style="list-style-type: none"> <li>1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation.</li> <li>2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.</li> <li>3. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.</li> <li>4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading.</li> <li>5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.</li> <li>6. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.</li> </ol> |
| <p>Test Instruments:</p> | <p>Refer to section 5.8 for details</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>Test mode:</p>        | <p>Refer to section 5.3 for details</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>Test results:</p>     | <p>Pass</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**Remark:**

1. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.
2. The measured filed strength at frequencies below 30MHz are lower than the limit over 30dB. So the data isn't reported.

**Measurement data:**
**■ 30MHz ~ 1GHz**

### Remark:

1. Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor
2. “\*”, means this data is the too weak instrument of signal is unable to test.
3. The emission levels of other frequencies are very lower than the limit and not show in test report.

## Remark:

1. Final Level = Receiver Read level + Antenna Factor + Cable Loss – Preamplifier Factor
2. “\*”, means this data is the too weak instrument of signal is unable to test.
3. The emission levels of other frequencies are very lower than the limit and not show in test report.
