Mode of use

Attach the mobile power supply to the back of the phone for charging.

Note: The cellular device needs to support the wireless charging function.

Instructions for use

(1) Charging for the mobile power supply: use the USB A to C charging cable distributed by the mobile power supply. Insert the USB C head of the charging cable into the USB-C port of the mobile power supply. Then insert the USB A head of the charging cable into the computer USB A head or DC 5V adapter (with USB A head), and automatically wake up to charge.

(2) Use mobile power to charge mobile phone digital products. You can use the Apple cable or type-C cable that comes with the product to charge your mobile phone or other digital products. You can also use the USB A to C cable delivered by this product to charge other products. Insert the A head of the charging cable into the USB-A interface of this product, and the C head of the charging cable into the type-C interface of other products. At this time, the mobile power supply automatically starts to charge the mobile phone digital products. The mobile power supply turns off the light display about 3S to 5S, and automatically turns off the output power output after 70S to 90S.

(3) Do not use the power supply for other equipment. Inappropriate use conditions will damage the performance of the power supply, reduce the life, and even make the power supply heat, smoke, deformation or combustion.

(4) Do not directly touch the electrolyte leaking from the leaking power supply, which will cause skin discomfort. In case the electrolyte enters the eyes, rinse with water as soon as possible, do not rub the eyes, and promptly sent to the hospital for treatment.

Danger warning

1. Do not disassemble the power supply. The power supply has a protection mechanism and a protection circuit to avoid danger. Improper disassembly will damage the protection function, will cause the power supply heating, smoke, deformation or burning.

2. Forbid short circuit of the power supply. Do not connect the positive and negative electrodes of the power supply with metal, and do not store and move the power supply with metal. If the power supply is short-circuited, there will be a large current flow, which will damage the power supply, causing the power supply to heat, smoke, deformation or combustion.

3. Strictly prohibit heating and burning the power supply. Heating and burning the power supply will cause melting of the power supply insulator, loss of safety function or electrolyte combustion. Overheating can cause the power supply to heat up, smoke, deform or burn.

4. Avoid using power near heat sources. Do not use power near fire sources, ovens, or environments above 80 °C. Overheating will cause a short circuit inside the power supply, causing the power supply to heat, smoke, deformation or burn.

5. Do not wet the power supply. Do not wet the power supply, and do not put the power supply into the water. Otherwise, it will cause the loss of function of the internal protection circuit of the power supply and the occurrence of abnormal chemical reactions, and the power supply may heat, smoke, deformation or combustion.

6. Avoid charging in the sun. Avoid charging near a fire or in direct sunlight. Otherwise, it will cause the loss of function of the internal protection circuit of the power supply and the occurrence of abnormal chemical reactions, and the power supply may heat, smoke, deformation or combustion.

7. Using a dedicated charger and proper charging. Using a non-dedicated charger to charge the power supply can be dangerous. Charging under abnormal conditions will cause loss of function of the internal protection circuit of the power supply and abnormal chemical reactions, and the power supply may heat, smoke, deformation or combustion.

8. Do not destroy the power supply. Do not use metal to chisel into the power
