RF EXPOSURE EVALUATION

1. PRODUCT INFORMATION

Product Description	Dual band wireless adapter
Model Name	9B06, 9B08
FCC ID	2AKC6XHT-WF9E

2. EVALUATION METHOD

According to 447498 D01 General RF Exposure Guidance v05

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(GHz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR.

Where f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

3. CALCULATION

According to the follow transmitter output power $\ (P_t)$ formula:

 $P_t = (E \times d)^2 / (30 \times g_t)$

P_t=transmitter output power in watts

gt=numeric gain of the transmitting antenna (unitess)

E=electric field strength in V/m

d=measurement distance in meters (m)

For 2.4G WIFI

P_t=9.53dBm=8.97mW

The result for RF exposure evaluation

SAR= $(8.97 \text{mW} / 5 \text{mm}) . [\sqrt{2.462} (\text{GHz})] = 2.81 < 3.0 \text{ for } 1-\text{g SAR}$

For 5G WIFI

Pt=7.24dBm=5.30mW

The result for RF exposure evaluation

SAR= $(5.30 \text{mW} / 5 \text{mm}) . [\sqrt{5.825} (\text{GHz})] = 2.56 < 3.0 \text{ for } 1-\text{g SAR}$

Note: The 2.4G and 5G WIFI can not transmit simultaneously.

4. CONCLUSION

The SAR evaluation is not required.
