**Re: Power Reduction Declaration**

**FCC ID: 2AU6IWTLM028**

Please be advised that the Radiated RF output power for both Wi-Fi and Cellular radios are reduced, when compared to the original reference designs, because the layout does not meet the antennae manufacturers' minimum requirements.

The reason the ground planes are not in compliance with the module manufacturers' minimum recommendations is the physical size of the product restricts the Cellular ground plane, and both Wi-Fi and Cellular radio antenna to ground plane clearances to less than the minimum specified in the manufacturers' data sheets resulting in higher than normal return loss in the RF path.

Yours Sincerely
