Subject: Certification Application, class2 permissive change, FCC ID: OJB-EX-F058

Please incorporate the addition of 'AB-Access, AB-Extender (AP)', as a permissive change to the existing FCC ID.

Note, there are no hardware differences between AB-Access, AB-Extender (SU), FCC ID: OJB-EX-F058, and AB-Access, AB-Extender (AP). The firmware determines whether the unit is an AP or a SU. In a wire-less communications link, the AP behaves as a master (initiating communication) and the SU behaves as a slave.

Yours sincerely

Jagir Athwal – Project Manager
