

FCC ID: TQ8-FOB-4F46

According to KDB 447498 D01 General RF Exposure Guidance v06.

At 100 MHz to 6 GHz and for test separation distances ≤ 50 mm, the SAR test exclusion threshold is determined according to the following.

$$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \times [\sqrt{f(\text{GHz})}] \leq 3.0$$

1. SAR test exclusion threshold

Frequency: 433.92 MHz (min. separation distances = 0 mm)

Calculation value: $0.011 \text{ (mW)} / 5 \text{ (mm)} \times \sqrt{0.43392} = 0.001$

So, Calculation value ≤ 3.0

Remark;

- Max. Radiated field strength 75.79 (dB μ V/m): Max. E.I.R.P. of EUT -19.44 dBm (0.011 mW)
- When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion.

2. Conclusion: No SAR is required.
