**Note for configurations and frequency allocations:**

The frequency allocations for configurations of WCDMA, LTE, G+L, G+W and W+L mode, were compliance with the definition in chapter 4.8 of 3GPP TS 37.141 V11.12.0(2015-07). Meanwhile, the configurations in chapter 5 of 3GPP TS 37.141 V11.12.0(2015-07) were used to perform the power, spurious emission and occupied bandwidth measurement for these modes above.

According to information from manufacturer, LTE operation can be configured to Carrier Aggregation(CA), and the maximum CA bandwidth is 40MHz. TC2, contiguous CA, was used to carry out the power measurement referring to the configuration in chapter 5 of the standard aforementioned, and the results were shown on page 19 to 23 of 257 in the test report. NTC2, Non-contiguous CA was used to perform the spurious emissions measurement according to configuration in chapter 5 of the standard aforementioned, and the results were shown on page 193 to 212 of 257 in the test report. For Occupied Bandwidth measurement, single carrier and ETC2, contiguous CA, were used to perform the testing, referring to the configuration in chapter 5 of 3GPP TS 37.141 V11.12.0(2015-07). In addition, ETC2 was configured in accordance with the description in chapter 4.2.10.2 of 3GPP TS 36.141 version 11.11.0 (2014-12). The Occupied Bandwidth results for LTE were shown on page 52 to 83 of 257.
