Upgrading Memory and Replacing Hard Drives

Pre-Upgrade Preparation

Switch off all peripheral devices connected to the minicomputer.

● Switch off the minicomputer and disconnect the power cord

●Remove the case screws of the minicomputer and open the case.

Replacement of memory

● To upgrade memory,be sure to select a memory module that meets the following requirements:DDR4 SO-DIMM Max:3200Mhz or DDR5 SO-DIMM:4800MHz.

●Removing an Old Memory Module Gently unfold the metal retaining cdlipsat each end of the memory socket to eject themodule from thesocket(C).Holding the module by its edges,remove it from the socket and store it in its anti-static packaging.

● Install a new memory module by first aligning the notches on the bottom edge of the memory module with the protrusions on theslotholder;then insert the bottom edge ofthe memory module into the socket at a 45-degree angle (A);after inserting the module,push down on the outer edge of the module until the retaining clips snap into place(B),and ensure that the dips are firmly seated.
Replace or install an M.2 SSD (installing a new SSD requires a system reinstallation)

● Remove the pre-installed (if any) SSD memory from the connector with a screwdriver in a counterclockwise direction (shown in Figure A); align the notch on the bottom of the new M.2 SSD with the protrusion on the connector, and then fit the bottom edge of the M.2 SSD and insert it into the connector (shown in Figure B), and finally use a screwdriver in a clockwise direction through the screws to fasten the M.2 SSD to the bracket (shown in Figure C).
