TEST REPORT

ACCORDING TO: FCC 47CFR part 1 section 1.1310 KDB 680106 D01 v03, section 3(c)

FOR:

Essence Smartcare Ltd. Wireless Charger of Mobile Personal Emergency Response System Model: ES902MPRS-CRADLE

This report is in conformity with ISO/ IEC 17025. The "A2LA Accredited" symbol endorsement applies only to the tests and calibrations that are listed in the scope of Hermon Laboratories accreditation. The test results relate only to the items tested. This test report shall not be reproduced in any form except in full with the written approval of Hermon Laboratories Ltd.

4 Test details

Project ID:	50382
Location:	Hermon Laboratories Ltd. P.O. Box 23, Binyamina 3055001, Israel
Test started:	13-Aug-23
Test completed:	13-Aug-23
Test specification(s):	FCC 47CFR part 1:2020, KDB 680106 D01 v03

Tests summary 5

Test	Status
H-field mesurment	Pass

This test report supersedes the previously issued test report identified by Doc ID: ESSRAD_FCC.50382_RFexp

Testing was completed against all relevant requirements of the test standard. The results obtained indicate that the product under test complies in full with the requirements tested.

The test results relate only to the items tested. Pass/ fail decision was based on nominal values.

6 EUT description

Note: The following data in this clause is provided by the customer and represents his sole responsibility

6.1 General information

The EUT is a wireless charger for Mobile Personal Emergency Response System, which includes a pendant and a charging cradle.

The EUT in charging mode is receiving power wirelessly from a WPT source (charging cradle). The EUT is powered from AC mains via AC/DC adapter, model DSA-10PF06-05, manufactured by DEE VAN ENTERPRISE Co. Ltd.

6.2 Ports and lines

Port type	Port description	Connected from	Connected to	Qty.	Cable type	Cable length, m
Power	AC	AC/DC adapter	AC mains	1	Shielded	1.6 m
Power	DC	AC/DC adapter	Wireless charger	1	Unshielded	1.8 m

6.3 EUT modes of operation

Charge mode

There is RF receiver consuming RF energy continuously, RF power transmitter is active at maximum power

Operating frequencies

Source	Frequency, kHz
WPT (wireless power transfer) transmitter	162.5

Idle mode

There is no RF receiver consuming RF energy.

6.4 Changes made in EUT

No changes were performed in the EUT during testing.

6.5 Test configuration

Emergency pendant		
Wireless charging frequency		
Wireless	AC/DC adapter	AC mains

7 RF exposure assessment

7.1 RF exposure

7.1.1 General

This test was performed to verify compliance with the relevant limits for general public exposure specified as basic restrictions or reference levels in the KDB 680106 D01 v02, section 3.3) & FCC sections 1.1307(b), 1.1310.. Specification test limits are given in Table 7.1.1.

Table 7.1.1 Reference levels for electric, magnetic and electromagnetic fields

Frequency range, kHz	H-field, A/m B-field, μT		Electric field strength, V/m			
KDB 680106 D01 v03, section 3(c) & FCC section1.1310 Limits for general population/ uncontrolled exposure						
0.1-0.3	1.63	2.05	614			

*More stringent for the highest frequency of the range

7.1.2 Test procedure

- **7.1.2.1** The EUT was set up as shown in Figure 7.1.1 and the associated photographs. The RF exposure test was performed in free space conditions with isotropic magnetic field probe.
- **7.1.2.2** The ambient noise was measured and the result was recorded in Table 7.1.2.
- 7.1.2.3 The test was performed in charging mode.
- **7.1.2.4** The Magnetic Field Tester (measurement probe) was placed at a 20 cm test distance, which is between the the edge of the charger and geometric center of the probe.
- **7.1.2.5** The upper side of the charging spotand nearby area at the edges were searched for the maximum probe reading while keeping 20 cm distance beween the center of the probe and the closest EUT surface.
- **7.1.2.6** The highest emission level was recorded in Table 7.1.3 and compared with the limit.
- 7.1.2.7 The test was repeated at the rest of test points (top, A, B, C, D) according to Table 7.1.3.

Full description is given in Appendix A.

RF Exposure evaluation according to FCC §1.1310

The wireless charger transmitter operates in 110-205 kHz range. It transfers power to WiFi emergency pendant transmitter. The wireless charger is classified as a mobile device.

Limit for power density for general population/uncontrolled exposure is 1 mW/cm² for 2.4 GHz band.

The power density P (mW/cm²) = $P_T / 4\pi r^2$

1) EUT:

Max H-Field result is 0.209 A/m, that corresponds to power density 1.63 mW/cm² at limit 100 mW/cm² (limit from ANSI/IEEE Std C95.1–2019)

2) Emergency pendant transmitter (2412-2462 MHz): the maximum equivalent isotropically radiated power EIRP is 22.52 dBm which corresponds to 178.64 mW (please refer to test report ESSRAD_FCC.50382_WiFi).

The power density at 20 cm (minimum safe distance, required by KDB 680106), calculated as follows:

 $178.64 \text{ mW} / 4\pi (20 \text{ cm})^2 = 0.035 \text{ mW/cm}^2 << 1 \text{ mW/cm}^2$

Summation

When all the antennas are at least 10 cm away from the user but individual antennas cannot be separated by 10 cm from each other, the following equation shall be fulfilled

 $S1/Limit + S2/Limit < 1, i.e. \\ 1.63 \ mW/cm^2 / 100 \ mW/cm^2 + 0.035 \ mW/cm^2 / 1 \ mW/cm^2 = 0.0163 + 0.035 = 0.0513 < 1$

Therefore, the charging spot including pendant transmitter complies with FCC RF exposure limit for mobile device for general population.

General public cannot be exposed to dangerous RF level.

8 APPENDIX A Test equipment and ancillaries used for tests

HL No	Description	Manufacturer	Model	Ser. No.	Last Cal./ Check	Due Cal./ Check

9 APPENDIX B Measurement uncertainties

Expanded uncertainty at 95% confidence in Hermon Labs EMC measurements

Test description	Expanded uncertainty
H-field	+ 5.5 %

Hermon Laboratories is accredited by A2LA for calibration according to present requirements of ISO/IEC 17025 and NCSL Z540-1. The accreditation is granted to perform calibration of parameters that are listed in the Scope of Hermon Laboratories Accreditation.

Hermon Laboratories calibrates its reference and transfer standards by calibration laboratories accredited to ISO/IEC 17025 by a mutually recognized Accreditation Body or by a recognized national metrology institute. All reference and transfer standards used in the calibration system are traceable to national or international standards.

In-house calibration of all test and measurement equipment is performed on a regular basis according to Hermon Laboratories calibration procedures, manufacturer calibration/verification procedures or procedures defined in the relevant standards. The Hermon Laboratories test and measurement equipment is calibrated within the tolerances specified by the manufacturers and/or by the relevant standards.

10 APPENDIX C Test laboratory description

Tests were performed at Hermon Laboratories Ltd., which is a fully independent, private, EMC, Radio, Safety, Environmental and Telecommunication testing facility.

Hermon Laboratories is recognized and accredited by the Federal Communications Commission (USA) for relevant parts of Code of Federal Regulations 47 (CFR 47), Test Firm Registration Number is 927748, Designation Number is IL1001; Recognized by Innovation, Science and Economic Development Canada for wireless and terminal testing (ISED), ISED #2186A, CAB identifier is IL1001; Certified by VCCI, Japan (the registration numbers for OATS are R-10808 for RE measurements below 1 GHz, G-20112 for RE measurements above 1 GHz, R-11082 for anechoic chamber for RE measurements below 1 GHz, G-10869 for RE measurements above 1 GHz, C-10845 for conducted emissions site and T-11606 for conducted emissions at telecommunication ports).

The laboratory is accredited by American Association for Laboratory Accreditation (USA) according to ISO/IEC 17025 for electromagnetic compatibility, product safety, telecommunications testing, environmental simulation and calibration (for exact scope please refer to Certificate No. 839.01, 839.03 and 839.04).
