

Exhibit 12

Tune-Up Procedure

Section 2.1033(c)(9): Tune-up procedure over the power range, or at specific operating power levels.

The Nokia **CMRO B25/B2 2x5W**, subject of this application, cannot be “tuned-up” by the user. There are no user tune-up features. All tuning is performed by the manufacturer during, and as part of, the manufacturing process. The CMRO units are tested and verified to provide +27 dBm to +37 dBm at each antenna output terminal, with a tolerance of ± 1.0 dB over the entire frequency band, **in the factory during the manufacturing process.**
