Subject: TCB review of Giant FCC ID: K7GT4900, SAR report

Dear Mr. Cirwithian

I've received the SAR test report S/N: ICSAR.240827501.K7G as part of the FCC Application for Giant Electronics FCC ID: K7GT4900 and have the following comments:

- 1) The report is issued for Canadian certification (RSS-102). Please modify the report for the FCC certification and indicate FCC ID: K7GT4900.
- 2) There is a typo on page 1, The power of 26.946 dBm is converted to 0.495 W (nor 0.485 W), as written on the last page.
- 3) The SAR report is more than 4 Mb. Please reduce the size (there are many similar setup photos in the report, some of them may be deleted) or split the report in two files.

Thanks
David Chernomordik

Importance: High

Hello Tommy,

The ERP in the test report is:

0.52W - GMRS

0.47W - FRS

However, in the "tune-up procedure" (item 5) the ERP is 0.18W and 0.19W. Please correct.

Please respond ASAP.

David
