

EXHIBIT 4**Section 2.1033 (c)(8) DC VOLTAGES AND CURRENTS**

The dc voltage applied to and dc currents into the several elements of the final radio frequency amplifying device for normal operation over the power range.

Response

The dc voltage applied to and dc currents into the final radio frequency amplifier in the SBEDRU for normal operation are 5 V and 150 mA.

Section 2.1033 (c)(9) TUNE-UP PROCEDURE

Turn-up procedure over the power range, or at specific operating power levels.

Response

The AS5CMP-40 SBEDRU transceiver does not have user tune-up procedures for various power levels. The only available power adjustment for the user is through tuning the recessed screw located on the faceplate of the SBEDRU transceiver, which allows the SBEDRU transceiver to operate at the proper power level.
