

 MITSUBISHI

400 SCANNING COLOR DISPLAY MONITOR
WITH DIGITAL CONTROLS

Diamond Scan 50/50M

MODEL SD5904C / SD5904CM
USER'S GUIDE

© 1990 Mitsubishi Electric Corporation

Our family of monitors, based on the most
pioneering scanning technology available,
is produced by
MITSUBISHI
A Division of the Mitsubishi Electric
Corporation of America

SD5904C
SD5904CM

100-120VAC

CAUTION

This power supply unit and with this monitor is designed for safety operation connected with a properly grounded outlet to avoid possible electric shock.

Never remove the power cable as this can expose you to very high voltages and other hazards.

ANMERKUNG:

Dieser Monitor erfüllt die Anforderungen der deutschen Ergonomie-Norm ZH11/GV1070-01 bei Verwendung der beiden folgenden Timings:

Auflösung Verarbeitungsfreq. 96Hz 16Hz Interface: Non-Interface
640x480 Arbeitsfrequenz: 640x480 96.0 60.0 Non-Interface

Aus Sicherheitsgründen wird empfohlen, die Grundfarbe Blau nicht auf horizontalen Intervallen zu verwenden (schlechte Erkennbarkeit, Augenbelastung bei zu langem Farbwechseln).

Bei hoher Auflösung kann es vorkommen, daß aus ergonomischen Gründen nur vertikale Frequenzen größer oder gleich 70Hz zu verwenden.

Zur Entfernung vom Netz ist der Netztecker aus der Steckdose zu ziehen, wodurch sich in der Nähe des Gerätes befinden muß und leicht zugänglich sein soll.

Das Gerät schaltet automatisch auf die zutreffende Nennspannung ein.

RADIO INTERFERENCE REGULATIONS STATEMENT FOR U.S.A.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
 - Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

NO USER SERVICEABLE PARTS INSIDE. DO NOT ATTEMPT TO MODIFY THIS EQUIPMENT. IF MODIFIED, YOUR AUTHORITY TO OPERATE THIS EQUIPMENT MIGHT BE VOIDED BY FCC.

WARNING!

This product is not designed for use in life support devices and Mitsubishi Electric Corporation makes no representations to the contrary. Life support devices are those devices which are used to measure, diagnose, or evaluate the tissue, systems or functions of the human body; or other devices employed to support or sustain life or quality of health.

MANUFACTURER DECLARATION FOR CE-MARKING:

We, Mitsubishi Electric Corp., declare under our sole responsibility, that this product is in conformity with the following standards:

EN60950

EN65002 Class B

EN60982-1

EN61000-3-2

following the provisions of:

73/23/EEC - Low Voltage Directive

89/339/EEC - EMC Directive

As an ENERGY STAR® Partner, Mitsubishi Electric Corporation has determined that this product meets the ENERGY STAR® guidelines for energy efficiency.

Note: This manual is designed for use with Diamond Scan 50/50M color display

monitor.

INTRODUCTION

The monitor is a high performance 17" diagonal 1280x1024 high resolution color monitor. It features a built-in 17" CRT monitor, pre-programmed colors, 16 levels of variableurable free operation, and a built-in speaker. This monitor is the latest addition to the welcome to Mitsubishi.

4.1 Features

The monitor has 17" and 17" Mtronix CRTs (from 15" - Digital Viewable Image) and digital, analog, composite and component inputs with outstanding RGB (Red, Green, Blue) and Y/C (luminance and chrominance) compatibility. It also has S-VGA, XGA, SVGA, XGA-2 and Apple Macintosh II compatibility. It is capable of displaying 16 million colors with most PC compatible video cards and standard Macintosh third party card video cards and on-board video.

Standard features include the following:

[Digital Viewable Image with Speaker]

This monitor can be connected directly to personal computers or it can be connected to video cards or other monitors via S-VGA, XGA, or Macintosh.

- The monitor features a built-in microprocessor using an internal microprocessor, for image generation, ranging between 20KHz and 74KHz and vertical scan frequencies ranging from 50Hz to 120Hz. The microprocessor based interface allows the monitor to change its frequency settings with the precision of a fixed frequency monitor.
- The monitor uses a fast memory for pre-programmed screen display standards and allows adjustment of the display parameters.
- The monitor has a built-in speaker, and retro-reflective TFT coating enhances the crisp images.
- Choice of a variety of display sizes from 1280 x 1024 resolution, making it suitable for various applications.
- The monitor has a built-in speaker, and retro-reflective TFT coating enhances the crisp images.
- Built-in speaker, and retro-reflective TFT coating enhances the crisp images.
- The monitor uses a built-in power source, EMI filter, EMI filter and Energy Star power consumption. To connect the monitor to a computer, the monitor must be connected to a computer using a standard computer monitor cable. It is recommended to use a video card with a built-in monitor port.
- The monitor is UL listed, CSA certified, FCC Class A and EMI RG2/Class B for EMI, MTBF 10,000 hours, operating temperature range from 0°C to +40°C for computers with TCO '95 certification and a limited 3 year warranty.
- The monitor has a built-in speaker, and retro-reflective TFT coating enhances the crisp images.

1.2 Preset Timing and Internal Preset Memory Capability

To minimize the need for adjustment, eight (8) popular display standards, shown below, have been preset into the monitor. If any of these display standards are detected, the picture size, centering and geometry is automatically adjusted. All of the presets may be over-written by adjusting the user controls (refer to chapter 4). The new display information must differ from any of the existing display standards by at least 2kHz horizontal scan frequency, or 100Hz vertical scan frequency, or the sync. signal polarities must be different.

The eight display presets programmed as factory presets may be restored by reset mode of adjusting the user controls.

No.	Display Resolution	Horizontal Fh (kHz)	Vertical Fv (Hz)	Polarity	
				H	V
1	VGA 640dot x 480 line	31.469	59.944	-	-
2	VGA 640dot x 400 line	31.469	70.080	-	+
3	SVGA 800dot x 600 line	46.875	75.000	+	+
4	1624dot x 768 line	60.023	75.029	+	+
5	1624dot x 768 line	66.754	70.413	-	-
6	Macintosh 640dot x 480 line	35.001	56.667	-	-
7	Macintosh 832dot x 624 line	49.717	74.530	-	+
8	640dot x 480 line	37.500	75.000	-	-

ENGLISH

1.5 Cleaning Your Monitor

When cleaning your monitor, please follow these guidelines:

- Always unplug the monitor before cleaning.
- Wipe the screen and cabinet front and sides with a soft cloth.
- If the screen requires more than dusting, apply a household window cleaner to a soft cloth to clean the monitor screen.

CAUTION

Do not use benzene, thinner or any volatile substance to clean the unit as the finish may be permanently marked. Never leave the monitor in contact with rubber or vinyl for an extended period.

1.6 Unpacking

After you unpack your color monitor you should have all of the items indicated in Figure 1 as listed below. Save the original box and packing materials in case you have to ship or transport your monitor.

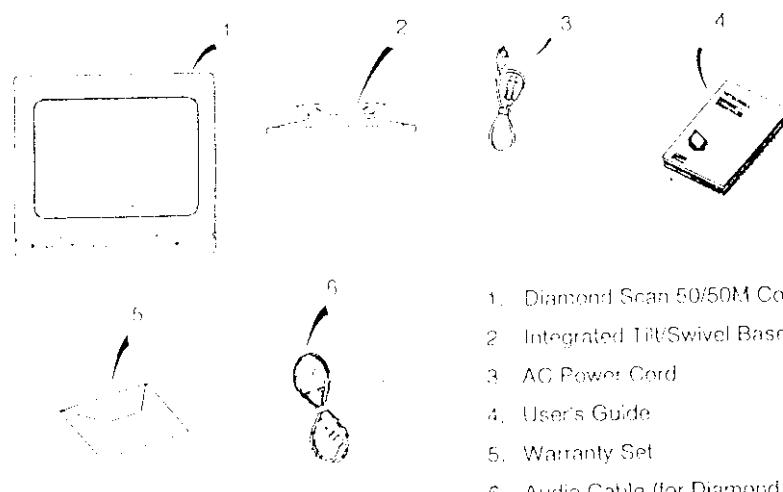

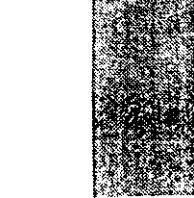

Figure 1.

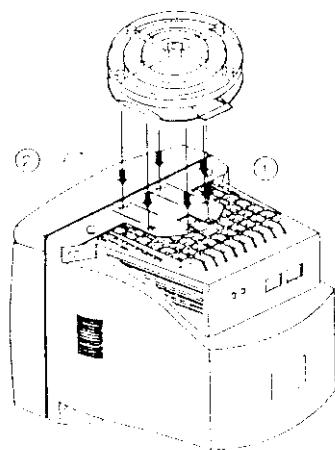

ENGLISH

1.7 Tilt/Swivel Base

The monitor comes with a tilt/swivel base. This enables you to position the monitor to the best angle and tilt for maximum viewing comfort.

Tilt/Swivel base assembly

1. To place the tilt/swivel base, gently lay the monitor on its side or top, and align the tabs on the tops of the base into the grooves in the underside of the monitor.
2. Push the base toward the front of the monitor until it clicks into place in front of the six plastic prongs.

Screen Position Adjustment

Adjust the tilt and rotation of the monitor by placing your hands at opposite sides of the case, as shown in Figure 2. You can adjust the monitor 90 degrees right or left, 15 degrees up or 5 degrees down, as shown below.

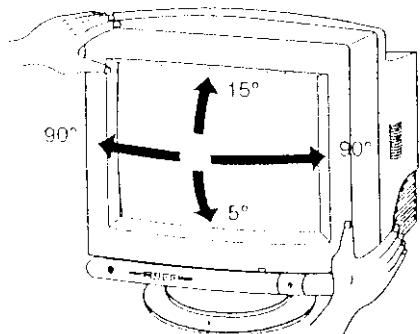

Figure 2.

CAUTION

Reorientation of the monitor while its power is on will affect screen color purity. Observation of partial color change is normal as the monitor is being magnetized by the earth's magnetic field. This is a common phenomenon. In this case, just activate the manual degauss function in CGD control, the screen should have good purity.

Do not remove the TILT-SWIVEL base from your monitor. Removing the tilt / swivel base causes the internal temperature to rise and monitor will not rest properly or may slide off your desktop.

CONNECTING THE MONITOR

2.1 AC Power Cord Connection

One end of the AC power cord is to be connected to the back of the monitor. The other end is to be connected to a properly grounded three-prong AC outlet. The monitor's autosensing power supply can automatically detect 100-120V AC or 200-240V AC and 50 or 60Hz.

2.2 Signal Cable Connection

The attached video signal cable provides a mini D-SUB 15P connector for the VGA compatible monitor RGB outputs on your PC. The RGB signal may be derived from an IBM® PCP, using add-on Apple Macintosh™ built-in video or most third party color cards can be interfaced by using the Mitsubishi Apple adapter available from your dealer.

2.2.1 Connecting to Any IBM VGA Compatible System

1. Power off both the monitor and the PC.
2. Connect the monitor signal cable to the 15-pin connector on the graphic card (see Figure 3).
3. Power on the PC then the monitor.
4. After using the system, power off the monitor, then the PC.

CAUTION:

The power supply of the monitor remains active even when the power switch is off. Therefore, the power socket should be readily accessible in case of an emergency or to disconnect the monitor completely.

Même si le moniteur est mis hors tension il reste toujours alimenté. La prise secteur devrait alors être également accessible en cas d'urgence ou pour débrancher le moniteur complètement du secteur.

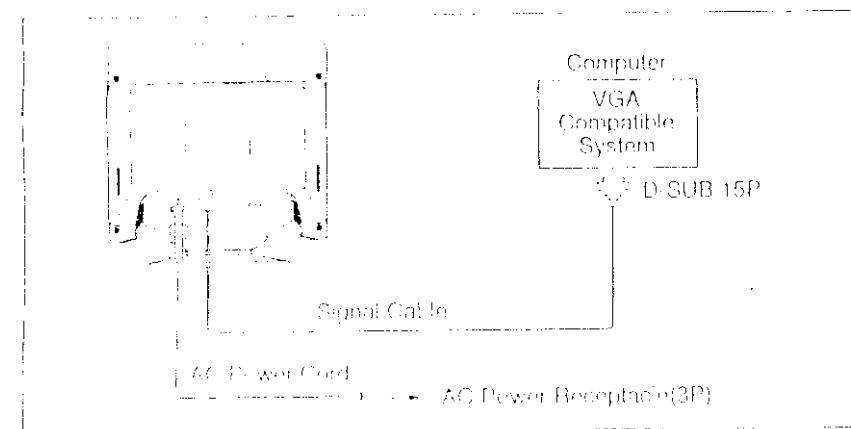

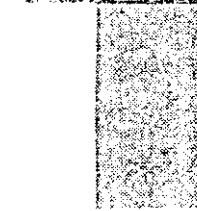

Figure 3.

ENGLISH

ENGLISH

2.2.2 Connecting to An Apple Macintosh Series Computer

Figure 4 shows the connection of the SD 2 connector when using an APPLE Macintosh® computer (in a 640 x 480 application only).

1. Power off the monitor and the Apple Macintosh computer.
2. Connect the 15-pin (D-SUB-15P) of the SD 2 adapter to the straight 15-pin connector on the Macintosh® video port (rear of the CPU) or on the video board.
3. Connect the subminiature 15-pin (D-SUB-15P) of the connector to the monitor signal cable.
4. Power on the Macintosh then the monitor.
5. After using the system, power off the monitor, then the Macintosh.

CAUTION

The power supply of the monitor remains active even when the power switch is off. Therefore, the power socket should be readily accessible in case of an emergency or to disconnect the monitor completely.

Macintosh moniteur reste toujours branché et active lorsque l'alimentation est coupée. La prise secteur devrait ainsi être facilement accessible en cas d'urgence ou pour débrancher le moniteur complètement du secteur.

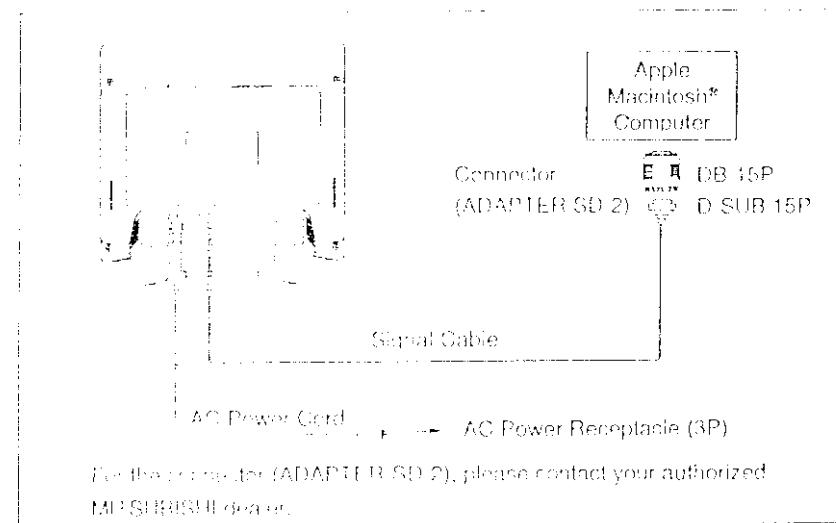

Figure 4.

2.3 Quick Operation Chart

To summarize the steps in connecting your computer and adapter with Diamond Scan 5000M color monitor and setting the necessary controls and switches, refer to the chart below.

Connect the power cord to the color monitor and the signal cable between the monitor and the graphics adapter.

See 2.1 AC Power Connection
2.2 Signal Cable Connection

Turn on the computer.

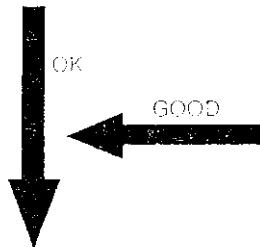

Turn on the color monitor.

Set the controls and switches.

See 3. USER CONTROLS
4. FUNCTION CONTROLS

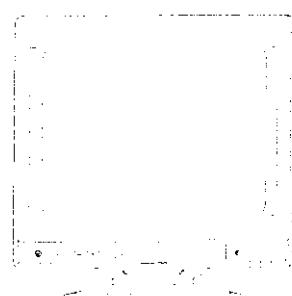

If a problem appears.

See 6. TROUBLESHOOTING

If the problem persists.

Call your authorized MITSUBISHI Product Support at 1-800-344-6352.

3

USER CONTROLS

See Figure 5 for the location of the following user controls and indicators. Each control is identified by number and is described individually.

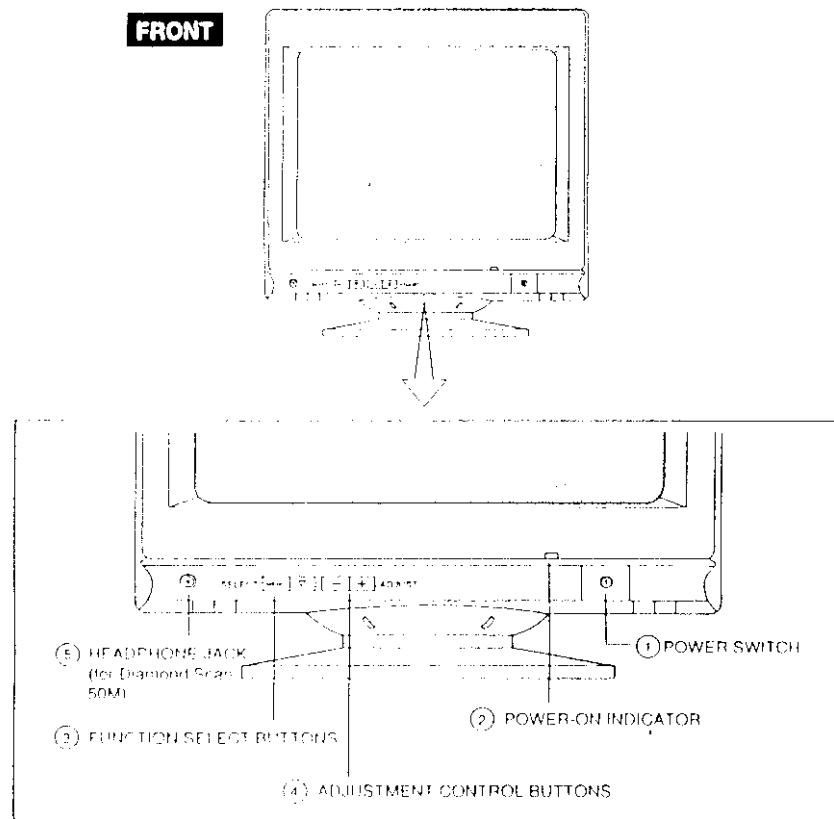

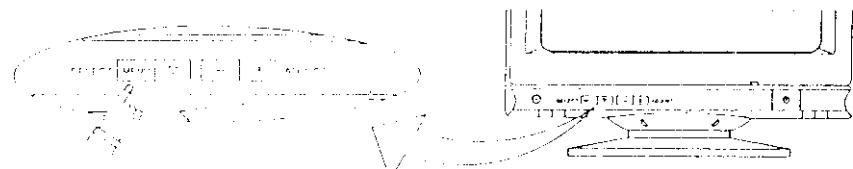

Figure 5

3.1 Control Names

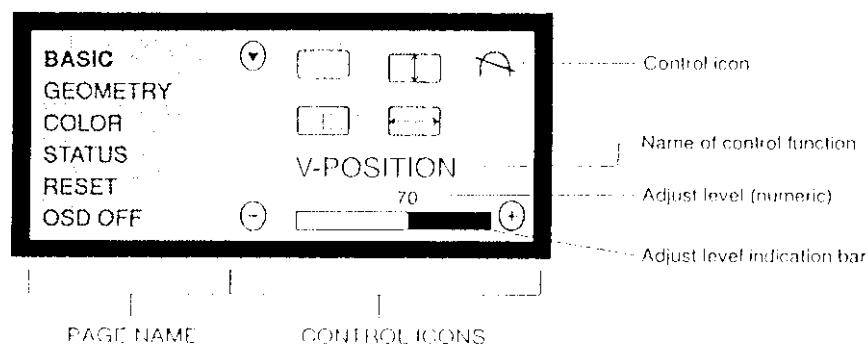

- ① **POWER SWITCH:** A push-on / push-off switch for AC power
- ② **POWER-ON INDICATOR:** This indicator illuminates when AC power is on.
- ③ **FUNCTION SELECT BUTTONS:** Push the menu (**■**) or down (**▼**) buttons and select the adjustment item for the desired adjustment.
- ④ **ADJUSTMENT CONTROL BUTTONS:** Push the increase (**■**) or decrease (**▼**) buttons for the desired adjustment. All adjustments are memorised automatically when OSD menu is off.
- ⑤ **HEADPHONE JACK (for Diamond Scan 50M)**

4 FUNCTION CONTROLS

Refer to Figure 5 for the location of monitor function controls and see the indicators superimposed on display screen.

Press the (Main) button to activate the control functions in the main menu as stated below.

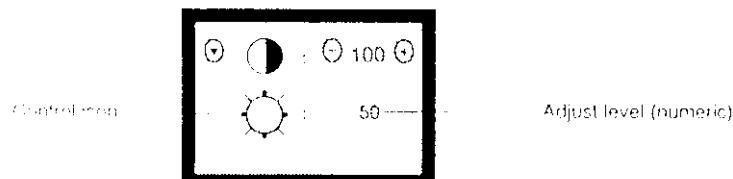

The active PAGE NAME is indicated in red and active CONTROL ICON is indicated by superimposed yellow block.

Press the (Page) button to select the page of control functions and press (I▼) button to select the control icon within the page selected.

NOTE: If left untouched for approx. 30 seconds, the Main Menu OSD screen will disappear.

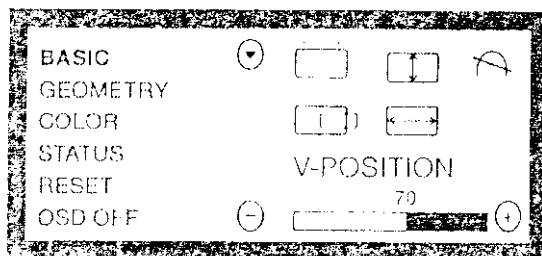

While the main menu is not superimposed on the display screen, press (L▼) or (R▼) adjust button to activate the sub-menu which consist of Contrast and Brightness control icon as shown below.

Each Control icon can be selected by pressing (I▼) button under SUB-MENU.

NOTE: If left untouched for approx. 5 seconds, the Sub Menu OSD screen will disappear.

Page 1: Basic Function Control (BASIC)

Push the **[▼]** [**[▼]**] Button to select "V-Position / H-Position / V-Size / H-Size / Degauss" item.

• **V-Position Control**

Press the **[+]** Button:

- ... To move the image upwards.
- ... To move the image downwards.

• **H-Position Control**

Press the **[+]** Button:

- ... To move the image to the right.
- ... To move the image to the left.

• **V-Size Control**

Press the **[+]** [**[+]**] Button:

- ... To enlarge the height of the image.
- ... To reduce the height of the image.

• **H-Size Control**

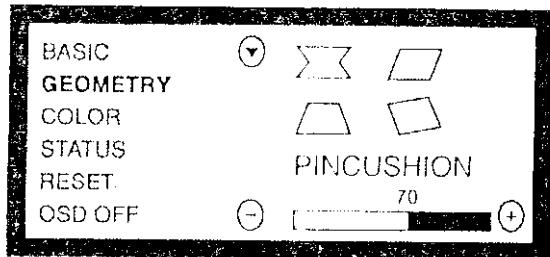

Press the **[+]** Button:

- ... To enlarge the width of the image.
- ... To reduce the width of the image.

• **Degauss Control**

Press the **[+]** Button to activate manual degauss function.

Page 2: Geometry Function Control (GEOMETRY)

Push the $\left[\begin{array}{c} \downarrow \\ \uparrow \end{array}\right]$ Button to select "Pincushion / Trapezoid / Parallel / Rotation" item.

• Pincushion Control

Press the $\left[\begin{array}{c} \downarrow \\ \uparrow \end{array}\right]$ Button

- ← ... To bow outwards at the center of the image.
- ... To bow inwards at the center of the image.

• Trapezoid Control

Press the $\left[\begin{array}{c} \downarrow \\ \uparrow \end{array}\right]$ Button

- ← ... To expand the top width of the image and reduce the bottom width of the image.
- ... To reduce the top width of the image and expand the bottom width of the image.

• Parallelogram

Press the $\left[\begin{array}{c} \downarrow \\ \uparrow \end{array}\right]$ Button

- ← ... To move the top of the image to right and the bottom of the image to left.
- ... To move the top of the image to left and the bottom of the image to right.

• Rotation

Press the $\left[\begin{array}{c} \downarrow \\ \uparrow \end{array}\right]$ Button

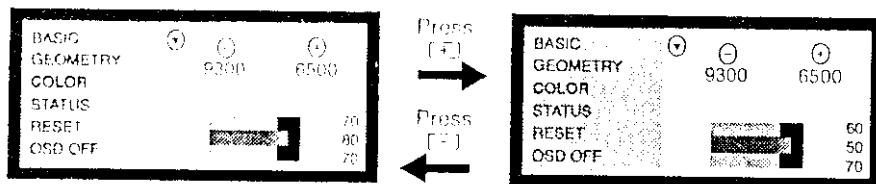

- ← ... To rotate the image in clockwise.
- ... To rotate the image in counter-clockwise.

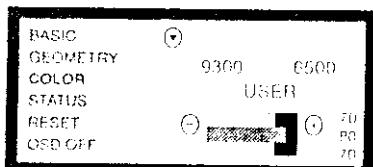

ENGLISH

Page 3: COLOR

Color temperature 9300K or 6500K, which are preset by factory, can be selected by pressing ([\downarrow]) or ([\uparrow]) button.

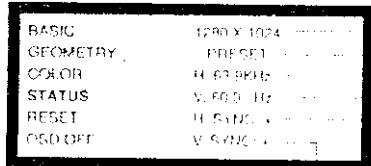

The R, G, B level of each color temperature can be changed by pressing ([∇]) to select the color, and press ([\blacktriangleright]) to increase the level, or press ([\blacktriangleleft]) to decrease the level.

NOTE: Once the color level is changed, a "USER" will be shown to indicate that the levels are no longer the factory preset level.

Page 4: STATUS

RESOLUTION

(Not showing when the timing is a user timing)

PRESET: To indicate the factory preset timing

USER: To indicate the user timing

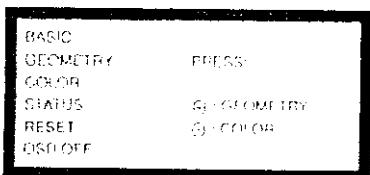

H: Horizontal scanning frequency

V: Vertical scanning frequency

H: Horizontal signal polarity

V: Vertical signal polarity

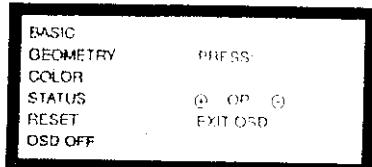

Page 5: RESET

Press ([\square]), the monitor will reset the geometry of the image. (Only for Factory Preset Timing).

Press ([\square]), the monitor will reset the color of the image.

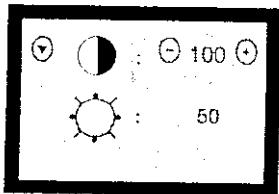

Page 6: OSD OFF

- Press () or () Button to exit OSD.
- Press () and () Button together for quick OSD OFF.

B) SUB-MENU

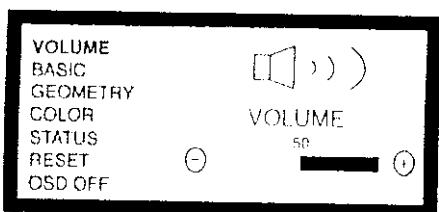

Contrast / Brightness Control

Push () Button to select Contrast / Brightness item.

Press the +/- Button

- To increase Contrast / Brightness level.
- To decrease Contrast / Brightness level.

C) Volume Control (for Diamond Scan 50M)

Press the +/- Button

- To increase volume level.
- To decrease volume level.

5

TROUBLESHOOTING

Before calling MITSUBISHI ELECTRIC, please check that the items below are properly connected or set.

In case of using a non-standard signal, please check the pin assignments and the signal timing of your adapter with the specification outlined in chapter 6 and 7.

PROBLEM	ITEMS TO CHECK	LOCATION
No picture	LED On-Green	<ul style="list-style-type: none"> Contrast and brightness controls.
	LED Off	<ul style="list-style-type: none"> Power switch. AC power cord disconnected.
	LED On-Amber	<ul style="list-style-type: none"> Signal cable disconnected. Computer power switch. Power management function is active.
No stable picture		<ul style="list-style-type: none"> Input signal frequency range is disagreement. CGA MODE is not available. MDA MODE is not available. EGA MODE is not available.
Abnormal picture	Display is missing, center shifts, or too small or too large of a display size	<ul style="list-style-type: none"> Activate the reset function in OSD for a standard signal. Adjust H-Size, V-Size, H-Position and V-Position with non-standard signals.
No sound (for Diamond Scan 50M)	Speaker no sound and headphone no sound	<ul style="list-style-type: none"> The volume setting in OSD control. The volume setting under PC Windows or Mac OS, make sure that the "mute" function is disabled. Audio Cable connection.
	Speaker OFF but headphone no sound	<ul style="list-style-type: none"> Headphone jack connection with the headphone plug.

If the problem persists, call MITSUBISHI Product Support at 1-800-344-6352.
