

Dear Diane,

Re:

Applicant: Symbol Technologies Inc

FCC ID: H9PMC7095

Correspondence Reference Number: 32107

731 Confirmation Number: EA665521

Date of Original E-Mail: 11/22/2006

Subject: FCC Equipment Authorization System

Applicant is responsible for compliance with FCC rules of final mobile-terminal product with and without accessories attached. In general, some metallic and/or structural changes to handsets used next to head or body can change near-field exposure conditions and change SAR.

Exhibit "MC70 Quick Start Guide" shows various accessories, eg, "Trigger Handle," "Magnetic Stripe Reader."

Will the transmitters in this mobile terminal be capable of operating in the same held-to-ear and near-body conditions when various accessories are installed?

<Response>

The two accessories "Trigger Handled and Magnetic Stripe Reader" are for Mobile RF Exposure condition only, since user will not be able to put the device into Symbol supplied body worn holster and also it is not convenient to use this device in held to ear position too, due to the fact that the physical dimension is too big after attaching these two accessories.

To ease the commission's concern, we have made spots check on all potential worst case configurations and have confirmed that the two accessories do not degrade the RF Exposure condition in all intended usage configurations. The new SAR test data relevant to these two accessories have been incorporated into the revised SAR test report in page 25 for summary and 59-63 for detail. Thank you so much for your help in reviewing this application.

Best regards,

Gary Chang
