

## Wi Fi intelligent camera instruction manual

V360 Pro

### 1. Download and install APP

1. Quickly download and install by scanning QR code
2. Search "V360 Pro" in App store or Google play, download and install
3. Go to the official website [www.hudbird.cn](http://www.hudbird.cn) and scan this code to download

V360 Pro

### 3. Three methods for camera connection

When configuring Wi-Fi for the first time, please place the camera as close to the Wi-Fi router as possible, and then install it to the location you need to install after the configuration is completed. If the installation location is far from the router, please directly connect the camera with the network cable.

### 3-2 Add Device by AP hotspot

Power up the camera and wait for this camera to start successfully. After hearing the voice prompt from Camera, open the mobile phone APP. Click the right "+" in the upper corner, select "hot spot adding" and follow the steps.

### 3-3 Add device by QR Code

Power up the camera and wait for this camera to start successfully. After hearing the voice prompt from Camera, open the mobile phone APP. Click the right "+" in the upper corner, select "QR code adding" and follow the steps.

### 3-4 Add Device By Network cable

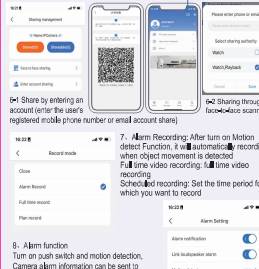

### 4. Home Page

### 5. Real time screen

### 6. Sharing function

### 9. Cloud storage playback

### 10. Video playback

FAQs:  
 1. What should I do if I can't connect to the network?  
 A. If the camera is 100% connected to the network, when connected to the network cable, open "Network cable to add camera" on the add page in the APP.  
 B. If you use Wi-Fi, please ensure that the Wi-Fi password is correct, do not plug in the network cable, and listen to the camera. The camera sends out startup music, and after meeting with the voice prompt, select the "Network cable to add camera" next to the OK to operate according to the prompts. If there is strong electronic interference around, or the Wi-Fi signal is weak, it is recommended to use the network cable to connect.  
 Note: It is preferred to ensure that the camera is powered on and can hear music from the camera during normal startup. The camera needs to use the standard power supply provided with the camera, and the power supply of the mobile phone cannot guarantee the normal operation of the camera.  
 2. What is the problem of image jumping?  
 The camera needs a certain defined bandwidth to maintain a stable connection. It is recommended that the upstream bandwidth of the network where the camera is located should be more than 2M, and the downstream bandwidth of the network where the mobile phone is located should be more than 1M. If the camera is connected to Wi-Fi, more people using Wi-Fi will also cause an image card. It is recommended that the camera be in the network cable and try again.  
 3. Is it normal for the camera to enter slowly in the "connector" state when adding?  
 It is normal because the user information of the camera is being sent to the cloud service at this time, which requires time to communicate with each other. If the mobile phone is lost accidentally in the future, as long as the login account remains unchanged, all camera information does not need to be re-entered.

## FCC Warning

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

**Note:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.
