The EUT is a frequency modulation Wireless Microphone with following features:

Operation Frequency Range: 614MHz to 806MHz. Type of emission is 118KF3E for headset.

- 1. To adjust GTMT Switch, and Gain Control, Simply push down both snap locks on the sides of battery cover and flip it backwards to expose the adjustment panel.
- 2. Before power on, ascertain if same channel was set up for both receiver and micrphone. If not adjust to same channel accordingly.
- 3. The LED indicator flashes briefly when power on indicating normal battery status. If not flash occurs it has either no battery, the battery is drained or installed incorrectly. Change accordingly.
- 4. Plug the microphone connector into the input jack and tighten the connector screw by clockwise direction.
