The image shows a black rectangular electronic control unit, likely a motor controller, resting on a blue textured surface. A black ruler is placed horizontally next to the unit for scale. Several wires are connected to the unit: a red and black power cable with a red label that reads "POWER IN 12V 10A", a blue cable, and a multi-colored cable with a yellow label that reads "This wire is connected to the motor. Do not connect to any other wire. Do not use as a ground wire." A black plastic connector is also attached to the unit. A small white label with the word "Zone1" is visible near the top of the unit.
