RE: Airspan Networks

FCC ID: PIDAIRSPAN-BSR

After a review of the submitted information, I have a few comments on the above referenced Application.

- 1) Please provide a sample frequency hopping list that shows compliance with the pseudo-random hopping requirements (one for frequency hopping mode and one for hybrid mode). Note that both frequency hopping and hybrid modes requires pseudo-random hopping.
- 2) The test report lists a 1.33 Mbit/s rate for hybrid modes that is not listed in the operational description. Please explain.
- 3) Plot A13 appears to show 62 channels instead of 61. Please explain. Is the frequency list given in the operational description missing a channel? Note that 61 channels are listed in Table 1 and the frequency list of the operational description, and various places throughout the test report. Please explain.
- 4) Please explain the use of the 25.0 and 18.0 dBm limits given in section 4.4 of the report. These limits for the conducted power are typically 30 dBm.

Timothy R. Johnson  
Examining Engineer
