

FCC RADIO TEST REPORT

Applicant	: Prowise B.V.
Address	Luchthavenweg 1b, 6021 PX Budel, The Netherlands
Equipment	: PROWISE TOUCHSCREEN TEN G3
Model No.	: PW.1.17065.0003 , PW.1.17065.**** (*=0-9)
Trade Name	Pr⊚wise
FCC ID	: 2AGUS-11706503
Standard	: FCC part 15 Subpart C §15.225

I HEREBY CERTIFY THAT:

The sample was received on Nov. 27, 2023 and the testing was completed on Dec. 26, 2023 at Cerpass Technology Corp. The test result refers exclusively to the test presented test model / sample. Without written approval of Cerpass Technology Corp., the test report shall not be reproduced except in full.

Approved by:

Leevin Li / Supervisor

Version No.	Report No	Date	Description
Rev.01	DEFO2311137	Jan. 02, 2024	Initial Issue

1. Summary of Test Procedure and Test Results

1.1. Applicable Standards

FCC Rules and Regulations Part 15 Subpart C §15.225

FCC Rule	Description of Test	Result		
15.203	Antenna Requirement	PASS		
15.207	Conducted Emission	PASS		
15.209 Radiated Emission		PASS		
15.215	20dB Bandwidth BW	PASS		
15.225(e) Frequency Stability PA				
Note: Deviations Yes □ No ■ *The lab has reduced the uncertainty risk factor from test equipment, environment and staff technicians which according to the standard on contract. Therefore, the test result will only be determined by standard requirement.				

CERPASS TECHNOLOGY CORP.

2. Test Configuration of Equipment under Test

2.1. Feature of Equipment under Test

Equipment	PROWISE TOUCHSCREEN TEN G3
Model Name	PW.1.17065.0003, PW.1.17065.**** (*=0-9)
Model Discrepancy	All models are identical except for model designation and appearance color. Model PW.1.17065.0003 is the representative for final test.
Frequency Range	13.56MHz
Modulation Type	ASK
Antenna Type	Loop Antenna
EUT Power Rating:	Input:100-240VAC, 50/60Hz, 8A

Note: For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.

2.2. Carrier Frequency of Channels

Channel	Frequency (MHz)	
*1	13.56	

Note: Channel remarked "*" is selected to perform test.

2.3. Test Mode and Test Software

- a. During testing, the interface cables and equipment positions were varied according to ANSI C63.10.
- b. The complete test system included EUT for RF test.
- c. The EUT transmits the NFC signal by contacting the NFC card.
- d. The test mode of RF test as follow:

Conducted E	Conducted Emissions from the AC mains power ports		
Test Mode	Operating Description		
1	NFC(13.56 MHz) Mode for AC120V		
2	NFC(13.56 MHz) Mode for AC240V		
caused "Tes	t Mode 1" generated the worst case, it was reported as the final data.		
Radiation Er	nissions (30MHz ~ 1GHz)		
Test Mode Operating Description			
1 NFC(13.56 MHz) Mode			
caused "Tes	caused "Test Mode 1" generated the worst case, it was reported as the final data.		
Radiation Emissions (<30MHz)			
Test Mode Operating Description			
1 NFC(13.56 MHz) Mode			
caused "Test Mode 1" generated the worst case, it was reported as the final data.			

2.4. Description of Test System

	Address: Room 102, No. 5, Xing'an Road, Chang'an Town,			
Test Site	Dongguan City, Guangdong Province			
	Tel: +86-769-8547-1212			
	Fax: +86-769-8547-1912			
FCC Designation No.:	CN1288			
Frequency Range	Conducted: from 150kHz to 30 MHz			
Investigated:	Radiation: from 9kHz to 40,000MHz			
Test Distance:	9KHz~30MHz: radiated emission from antenna to EUT is 3 M.			
	30MHz~1GHz: radiated emission from antenna to EUT is 3 M.			

2.5. General Information of Test

Test Item	Test Site	Test period	Environmental Conditions	Tested By
Radiated Emissions	3M01-DG	2023/12/26	23℃ /51%	Amos Zhang
AC Power Line Conducted Emission	CON01-DG	2023/12/26	20°C / 53%	Amos Zhang

2.6. Measurement Uncertainty

ISO/IEC 17025 requires that an estimate of the measurement uncertainties associated with the emissions test results be included in the report. The measurement uncertainties given below are based on a 95% confidence level (based on a coverage factor (k=2).

Measurement Item	Uncertainty	
AC Power Line Conduction(150K~30MHz)	±2.60dB	
Radiated Spurious Emission(9KHz~30MHz)	±4.10dB	
Radiated Spurious Emission(30MHz~1GHz)	±4.51dB	
Occupied Bandwidth	±4.5%

4. Antenna Requirements

4.1. Standard Applicable

According to FCC 47 CFR Section 15.203, an intentional radiator antenna shall be designed to ensure that no antenna other than that furnished by the responsible party can be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions or this section.

4.2. Result

The EUT has a permanently and irreplaceable attached antenna. Please refer to the EUT internal photos.

CERPASS TECHNOLOGY CORP.

5. Test of AC Power Line Conducted Emission

5.1. Test Limit

Conducted Emissions were measured from 150 kHz to 30 MHz with a bandwidth of 9 KHz, according to the methods defined in ANSI C63.10. The EUT was placed on a nonmetallic stand in a shielded room 0.8 meters above the ground plane. The interface cables and equipment positioning were varied within limits of reasonable applications to determine the position produced maximum conducted emissions.

Frequency (MHz)	Quasi Peak (dB µ V)	Average (dB μ V)
0.15 – 0.5	66-56*	56-46*
0.5 – 5.0	56	46
5.0 - 30.0	60	50

*Decreases with the logarithm of the frequency.

5.2. Test Procedures

- a. The EUT was placed 0.4 meter from the conducting wall of the shielding room was kept at least 80 centimeters from any other grounded conducting surface.
- b. Connect EUT to the power mains through a line impedance stabilization network (LISN).
- c. All the support units are connecting to the other LISN.
- d. The LISN provides 50 ohm coupling impedance for the measuring instrument.
- e. The FCC states that a 50 ohm, 50 micro-Henry LISN should be used.
- f. Both sides of AC line were checked for maximum conducted interference.
- g. The frequency range from 150 kHz to 30 MHz was searched.
- h. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

5.3. Typical Test Setup

5.4. Test Result and Data

Factor = (LISN or ISN or PLC or Current Probe) Factor + Cable Loss + Attenuator

Factor = (LISN or ISN or PLC or Current Probe) Factor + Cable Loss + Attenuator

6. Test of Radiated Emission

6.1. Test Limit

- (a) The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.
- (b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters.
- (c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters.
- (d) The field strength of any emissions appearing outside of the 13.110-14.010 MHz band shall not exceed the general radiated emission limits in §15.209.

Frequency (MHz)	Distance	Limit (µV/ m)
0.09 ~ 0.490	300m	2400/F(kHz)
0.490 ~ 1.705	30m	24000/ F(kHz)
1.705 ~ 30	30m	30
30 ~ 88	3m	100
88 ~ 216	3m	150
216 ~ 960	3m	200
Above 960	3m	500

15.215 Additional provisions to the general radiated emission limitations.:

(c) Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated.

6.2. Test Procedures

- a. The EUT was placed on a rotatable table top 0.8 meter above ground.
- b. The EUT was set 3 meters from the interference receiving antenna which was mounted on the top of a variable height antenna tower.
- c. The table was rotated 360 degrees to determine the position of the highest radiation.
- d. The antenna is a broadband antenna and its height is varied between one meter and four meters above ground to find the maximum value of the field strength both horizontal polarization and vertical polarization of the antenna are set to make the measurement.
- e. For each suspected emission the EUT was arranged to its worst case and then tune the antenna tower (from 1 M to 4 M) and turn table (from 0 degree to 360 degrees) to find the maximum reading.
- f. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function and specified bandwidth with Maximum Hold Mode.
- g. If the emission level of the EUT in peak mode was 3 dB lower than the limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method and reported.
- h. "Cone of radiation" has been considered to be 3dB beamwidth of the measurement antenna.

NOTE:

- The resolution bandwidth of test receiver/spectrum analyzer is 300Hz or CISPS 200Hz(QP detector) at frequency Below 150 kHz.
- The resolution bandwidth of test receiver/spectrum analyzer is 10KHz or CISPS 9KHz(QP detector) at frequency 150 kHz to 30 MHz.
- 3. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Peak detection (PK) and Quasi-peak detection (QP) at frequency below 1GHz.

7. Frequency Stability

7.1. Test Procedure

- 1. The EUT was placed inside the Temperature and Humidity chamber.
- 2. The transmitter output was connected to spectrum analyzer.
- 3. Turn the EUT on and couple its output to a spectrum analyzer.
- 4. Turn the EUT off and set the chamber to the highest temperature specified.
- 5. Allow sufficient time (approximately 30 min) for the temperature of the chamber to stabilize, turn the EUT on and measure the operating frequency after 2, 5, and 10 minutes.
- 6. Repeat step 2 and 3 with the temperature chamber set to the lowest temperature.
- 7. The frequency tolerance of the carrier signal shall be maintained within ±0.01% of the operating frequency over a temperature variation of −20 degrees to + 50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.
