

Engineering and Testing for EMC and Safety Compliance

CERTIFICATION APPLICATION REPORT
FCC PART 15.247 & INDUSTRY CANADA RSS-210

Test Lab: Rhein Tech Laboratories, Inc. Phone: 703-689-0368 360 Herndon Parkway Fax: 703-689-2056 Suite 1400 Web Site: www.rheintech.com Herndon, VA 20170 E-Mail: ATCBINFO@rheintech.com		Applicant Information: Zebra Technologies Phone: 401-739-5800 ext. 352 Contact: Bob Heon Fax: 401-732-0145 30 Plan Way E-Mail: bheon@zebra.com Warwick, RI 02886	
FCC ID:	I28MD-BTC2TY	GRANTEE FRN NUMBER:	0006-3040-75
PLAT FORM:	Zebra portable printers & other Zebra products with similar physical characteristics	RTL WORK ORDER NUMBER:	2003058
MODEL NUMBER / NAME:	CC16735-1 / ZBR-2 (Bluetooth modular radio)	RTL QUOTE NUMBER:	QRTL03-747
DATE OF TEST REPORT:	June 2, 2003		
American National Standard Institute:	ANSI C63.4: Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz		
FCC Classification:	DSS – Part 15 Spread Spectrum Transmitter Frequency Hopping		
FCC Rule Part(s):	Part 15.247: Operation within the bands 920-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz Frequency Hopping System		
Industry Canada Standard:	RSS-210: Low Power License-Exempt Radio Communication Devices (All Frequency Bands)		
Digital Interface Information	Digital Interface was found to be compliant		
Receiver Information	Receiver was found to be compliant		
Frequency Range (MHz)	Output Power* (W)	Frequency Tolerance	Emission Designator
2402-2480	0.0008	N/A	N/A

* output power is maximum peak conducted

We, the undersigned, hereby declare that the equipment tested and referenced in this report conforms to the identified standard(s) as described in this test report.

Furthermore, there was no deviation from, additions to, or exclusions from the FCC Part 2, FCC Part 15, Industry Canada RSS-210, ANSI C63.4, ANSI/TIA/EIA603, and ANSI/TIA/EIA 603-1.

1 GENERAL INFORMATION

1.1 SCOPE

FCC Rules Part 15.247: Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz.

IC RSS-210 Section 6.2.2(o): Frequency Hopping, Direct Spread Spectrum and Hybrid Systems that are in operation within the bands of 902-928 MHz, 2400-2483.5 MHz and 5725-5850 MHz.

A direct sequence (DS) system is a spread spectrum (SS) system in which the carrier has been modulated by a high speed spreading code and an information data stream. The high-speed code sequence dominates the “modulating function” and is the direct cause of the wide spreading of the transmitted signal.

1.2 TEST FACILITY

The open area test site and conducted measurement facility used to collect the radiated data is located at 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report and approved by the Federal Communications Commission to perform AC line conducted and radiated emissions testing (ANSI C63.4 1992).

1.3 RELATED SUBMITTAL(S)/GRANT(S)

This is an original application certification for limited modular transmitter approval, based on the guidelines in FCC Publication DA 00-1407, for Zebra Technologies Corp. Model # CC16735-1, Model Name: ZBR-2, a modular Bluetooth radio, under FCC ID: I28MD-BTC2TY. The applicant requests modular approval to allow the use of this radio in Zebra printers and other products similar in style to those presented in this report, including housing type and materials, and not limited to the printers in this report. This Zebra radio has a proprietary interface that is only found on Zebra Technologies printers and other products. Appendix A of this report, a cover letter exhibit, includes a letter from the client justifying the modular approval request. The IF, LO and up to the 2nd LO were investigated and tested.

1.4 MODIFICATIONS

No modifications were made or performed during testing for compliance with any standard in this application.

2 TEST INFORMATION

2.1 TEST JUSTIFICATION

The EUT was tested in all three orthogonal planes in order to determine worst-case emissions. 2402 MHz, 2440 MHz and 2480 MHz were tested and investigated from 9 kHz to 24 GHz. Data for all three channels is presented in this report.

Six antennas were tested with the Bluetooth module and all were found to be compliant. The Bluetooth module and one of the antenna options are intended to be used in various Zebra hosts, such as portable printers and other devices with similar physical characteristics. The antennas are all internal dipole antennas, and the single antenna used in the final application will be internal to the host. The antenna transmits, receives, and is connected to the Bluetooth module antenna port.

2.2 EXERCISING THE EUT

The EUT was provided with software to continuously transmit on one channel or in the hopping mode during testing. The carrier was also checked to verify that information was being transmitted.

2.3 TEST RESULT SUMMARY

TABLE 2-1: TEST RESULT SUMMARY FOR FCC RULES AND REGULATIONS

STANDARD	TEST	PASS/FAIL OR N/A
FCC 15.205	Compliance with the Restricted Band Edge	Pass
FCC 15.207	Conducted Emissions	Pass
FCC 15.209	Radiated Emissions	Pass
FCC 15.247(a)(2)	Modulated Bandwidth	Pass
FCC 15.247(b)	Power Output	Pass
FCC 15.247(c)	Antenna Conducted Spurious Emissions	Pass
FCC 15.247(d)	Power Spectral Density	N/A

2.4 TEST SYSTEM DETAILS

The FCC Identifiers for all equipment, plus descriptions of all cables used in the tested system, are identified in Table 2-2.

The EUT, Model ZBR-2, is a Bluetooth radio module made by Zebra Technologies and designed for use in Zebra Technologies portable printers and other Zebra products. This device has a proprietary interface that is only found on Zebra Technologies printers.

2.5 CONFIGURATION OF TESTED SYSTEM

FIGURE 1: WORST CASE CONFIGURATION OF SYSTEM UNDER TEST

3 COMPLIANCE WITH THE RESTRICTED BAND EDGE – FCC §15.205; IC RSS-210 §6.3

3.1 TEST PROCEDURE

Compliance with the band edges was performed using the FCC's "Radiated Measurement at a Band Edge" guidance document. The data taken in this report represents the worst case at 2 Mbps. The data rate at 1 Mbps was also investigated and found to be in compliance.

3.2 BAND EDGE TEST EQUIPMENT

TABLE 3-1: BAND EDGE TEST EQUIPMENT

RTL ASSET #	MANUFACTURER	MODEL	PART TYPE	SERIAL NUMBER	CALIBRATION DUE DATE
900772	EMCO	3161-02	Horn Antenna	9804-1044	3/15/04
901020	Hewlett Packard	8564E	Portable Spectrum Analyzer (9 kHz - 40 GHz)	3943A01719	7/2/03

3.3 COMPLIANCE WITH THE RESTRICTED BAND EDGE TEST DATA

TABLE 3-2: COMPLIANCE WITH THE RESTRICTED BAND EDGE TEST DATA

Antenna Sample	Channel Set to	Frequency Tested (MHz)	Detector	Corrected Field Strength Level (dBμV/m)	FCC Limit (dBμV/m)	FCC Margin (dB)

4 CONDUCTED LIMITS – FCC §15.207; IC RSS-210 §6.6 AND 7.4

The EUT is battery operated, but an AC Adapter provided 9 VDC to power the Bluetooth module, and conducted line emission data is presented as follows.

4.1 TEST METHODOLOGY FOR CONDUCTED EMISSIONS MEASUREMENTS

The power line conducted emission measurements were performed in a Series 81 type shielded enclosure manufactured by Rayproof. The EUT was assembled on a wooden table 80 centimeters high. Power was fed to the EUT through a 50 ohm / 50 microhenry Line Impedance Stabilization Network (EUT LISN). The EUT LISN was fed power through an A.C. filter box on the outside of the shielded enclosure. The filter box and EUT LISN housing are bonded to the ground plane of the shielded enclosure. A second LISN, the peripheral LISN, provides isolation for the EUT test peripherals. This peripheral LISN was also fed A.C. power. A metal power outlet box, which is bonded to the ground plane and electrically connected to the peripheral LISN, powers the EUT host peripherals.

The spectrum analyzer was connected to the A.C. line through an isolation transformer. The 50-ohm output of the EUT LISN was connected to the spectrum analyzer input through a Solar 7 kHz high-pass filter. The filter is used to prevent overload of the spectrum analyzer from noise below 7 kHz. Conducted emission levels were measured on each current-carrying line with the spectrum analyzer operating in the CISPR quasi-peak mode (or peak mode if applicable). The analyzer's 6 dB bandwidth was set to 9 kHz. No video filter less than 10 times the resolution bandwidth was used. Average measurements are performed in linear mode using a 10 kHz resolution bandwidth, a 1 Hz video bandwidth, and by increasing the sweep time in order to obtain a calibrated measurement. The emission spectrum was scanned from 150 kHz to 30 MHz. The highest emission amplitudes relative to the appropriate limit were measured and have been recorded in this report.

Note: Rhein Tech Laboratories, Inc. has implemented procedures to minimize errors that occur from test instruments, calibration, procedures, and test setups. Test instrument and calibration errors are documented from the manufacturer or calibration lab. Other errors have been defined and calculated within the Rhein Tech Quality Manual, section 6.1. Rhein Tech implements the following procedures to minimize errors that may occur: yearly as well as daily calibration methods, technician training, and emphasis to employees on avoiding error.

4.2 CONDUCTED EMISSION TEST

The initial step in collecting conducted data is a spectrum analyzer peak scan of the measurement range. If the conducted emissions exceed the limit with the instrument set to the quasi-peak mode, then measurements are made in the average mode. If the quasi-peak measurement is at least 6dB higher than the amplitude in the average mode, the level measured in the quasi-peak mode may be reduced by 13dB before comparing it to the limit.

The conducted test was performed with the EUT exercise program loaded, and the emissions were scanned between 150 kHz to 30 MHz on the NEUTRAL SIDE and PHASE SIDE.

6 RADIATED EMISSION LIMITS; SPURIOUS AND HARMONICS – FCC §15.247; IC RSS-210 §6.3

6.1 RADIATED SPURIOUS EMISSION LIMITS TEST PROCEDURE

Radiated Spurious Emissions applies to harmonics and spurious emissions that fall in the restricted and non-restricted bands. The restricted bands are listed in Part 15.205. The maximum permitted average field strength for the restricted band is listed in Part 15.209. The EUT was tested in the 3 orthogonal planes.

7 CARRIER FREQUENCY SEPARATION - §15.247 (A)(1)

Frequency Hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

Measured frequency separation = 0.999 kHz

7.1 20 DB BANDWIDTH TEST PROCEDURE – FCC §15.247 (a)(1)(ii); IC RSS-210 §5.9.1

The minimum 20 dB bandwidths per RSS-210 were measured using a 50 ohm spectrum analyzer. The carrier was adjusted on the analyzer so that it was displayed entirely on the Spectrum Analyzer. The sweep time was set to 10 seconds and allowed through several sweeps with the max hold function used in peak detector mode. The resolution bandwidth was set to 100 kHz, and the video bandwidth set at 300 kHz. The minimum 20 dB bandwidths were measured using the spectrum analyzer delta marker set 20 dB down from the peak of the carrier and modulated with a 2 Mbps data rate. The table below contains the bandwidth measurement results.

8 HOPPING CHARACTERISTICS – FCC §15.247 (A)(1)(III); IC RSS-210 §6.2.2(O)

Frequency hopping systems in the 2400-2483.5 MHz band shall use at least 15 non-overlapping channels. The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed. Frequency hopping systems which use fewer than 75 hopping frequencies may employ intelligent hopping techniques to avoid interference to other transmissions. Frequency hopping systems may avoid or suppress transmissions on a particular hopping frequency provided that a minimum of 15 non-overlapping channels are used.

8.1 NUMBER OF HOPPING FREQUENCIES

Measured number of hopping frequencies = 79

8.2 AVERAGE TIME OF OCCUPANCY

The spectrum analyzer sweep was set to 0.020 second, with a zero span and max hold until a pulse from the device under test was captured. A marker delta was used to measure dwell time for this plot. The sweep was then set to single sweep for 30 seconds for the required average time and the number of pulses counted to calculate the average time of occupancy as:

Number of Pulses in 30 Seconds (84) x Dwell Time Measured (0.240 milliseconds) = 19.9 ms Average Occupancy in 30 seconds. Since the average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed, and the number of hopping channels is 79, then: $79 \times 0.4s = 31.6s$ and the number of the average occupancy on any channel is 0.02 s within a 30 second period which meets this criteria.

11 ANTENNA CONDUCTED SPURIOUS EMISSIONS - §15.247(C); IC RSS-210 §6.2.2(o)(e1)

11.1 ANTENNA CONDUCTED SPURIOUS EMISSIONS TEST PROCEDURES

Antenna spurious emission per FCC 15.247(c) was measured from the EUT antenna port using a 50 ohm spectrum analyzer with the resolution bandwidth set at 100 kHz, and the video bandwidth set at 300 kHz. The modulated carrier was identified at 2.402 GHz for the low channel, 2.440 GHz for the mid channel and 2.480 GHz for the high channel. No other harmonics or spurs were found within 20 dB of the carrier level from 9kHz to the carrier 10th harmonic. See the Antenna Conducted Spurious Noise Table. The low, middle, and high channels were investigated and tested. No notch filter was used during measurement since the fundamental did not overload the input to the spectrum analyzer.

Client: Zebra Technologies
Model Name/ #: ZBR-2/CC16735-1
FCC ID: I28MD-BTC2TY
FCC: 15.247
IC: RSS-210

12 CONCLUSION

The data in this measurement report shows that the Zebra Technologies Model # CC16735-1, Model Name: ZBR-2, Bluetooth Modular Radio, FCC ID: I28MD-BTC2TY complies with all the requirements of Parts 2 and 15 of the FCC Rules and Industry Canada RSS-210. Furthermore, it meets the guidelines for limited modular transmitter approval as shown in FCC Publication DA 00-1407, and should be granted as such.
