5.2.3.4 Import &Export

The user can import and export DCU configuration by clicking Function　Import & Export, as shown in the following figure.

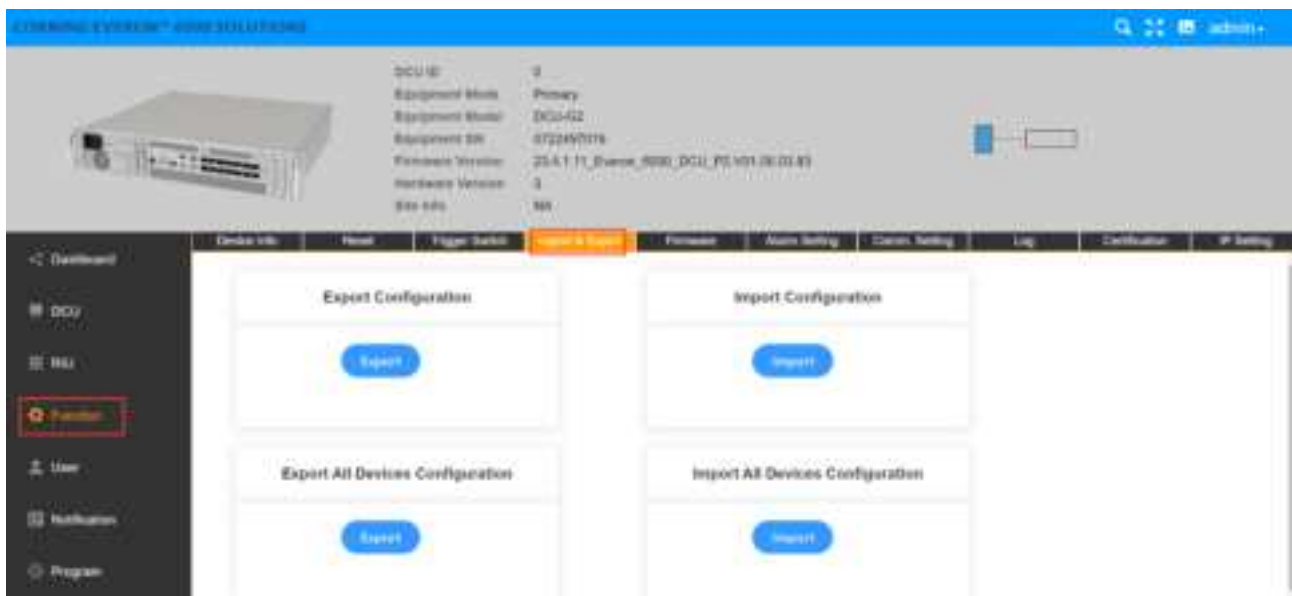

Figure 129 DCU　Function　Import & Export

5.2.3.5 Firmware

Click Function　Firmware and the firmware info can be viewed and upgraded.

Figure 130.DCU　Function　Firmware

Two upgrade modes are supported by 5G digital DAS products of D430 series of the system software of all NE: centralized upgrade and decentralized upgrade. The settings of the two modes can be configured in Control Switch.

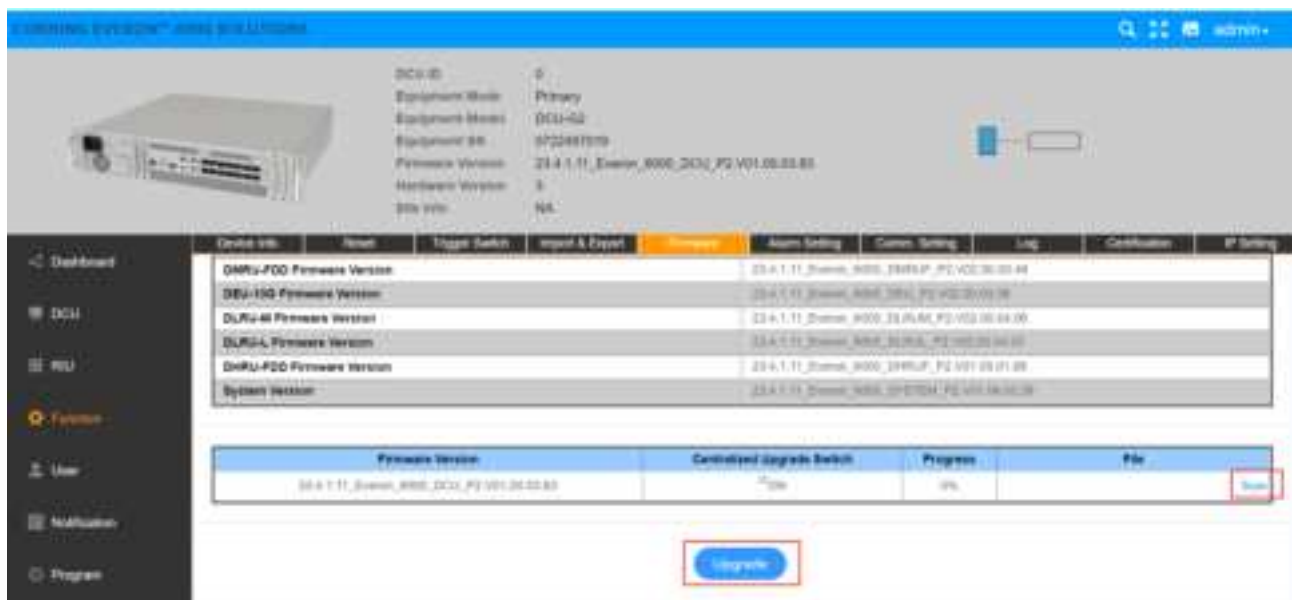

Figure 131. Firmware Upgrade Configuration

1. Decentralized upgrade: the Control Switch is OFF and only the software of the current DCU unit can be upgraded in this mode. The steps to upgrade the software are the followings:

Step 1: Click SCAN to import the software version to be upgraded.

Step 2: Click Upgrade. When the progress of downloading the software to the device is 100% and FINISH is prompted, the software is successfully downloaded.

Step 3: After the device is reset, the software will be upgraded automatically.

2. Centralize upgrade: the Control Switch is ON. The system software of seven NE (RIU, DCU, DEU, dLRU-2.5, dLRU-3.5, dMRU-2.5, dMRU-3.5) in the 5G digital DAS products will be stored after they are imported into the internal storage by the users. All the slave NE (slave DCU, DEU, dLRU) connected to this seven NE will automatically take the system software to be upgraded independently.

5.2.3.6 Alarm Setting

Through Function　Alarm Setting, setting the alarm duration can be achieved. When it is set to 1~253, it shows alarm duration, with the unit of 10s. Setting to 254 indicates an immediate level alarm; Set to 0 and the alarm will not occur until 3 minutes later.

5.2.4 DCU -> User Info

5.2.4.1 Password

Click User->Password to reset the DCU password which should include capital and lower-case letters and 12 digits in length.

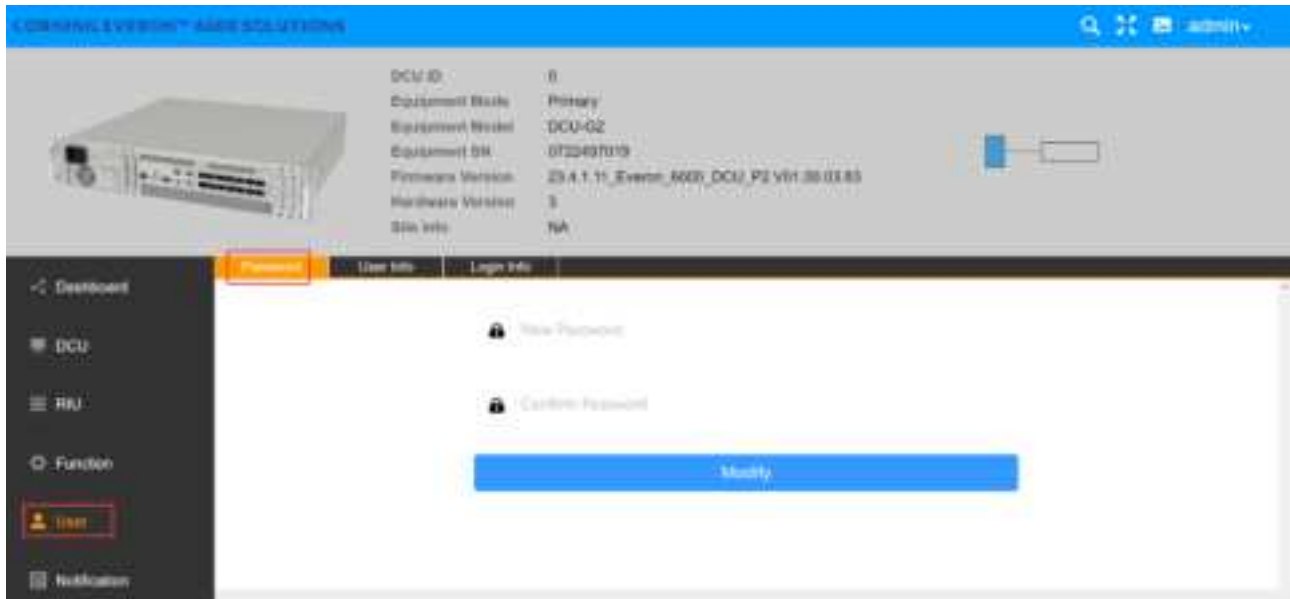

Figure 138. DCU User Password

The rules for setting passwords are as follows:

1. Default account and password at the first access: account/password= admin/admin

2. Need to change the password after the first access

3. Password restriction:

- The minimum user password length is 12 characters.

- At least three combinations of numbers, uppercase, lowercase and special symbols

It has been shown in the Web GUI if we enter into the password setup/modify page as follow

At least three combinations of numbers, uppercase, lowercase and special symbols

*Figure 147.DEU 10 G Alarm Info*

Alarms can be set and viewed in this function which are defined as follows:

1)   Equipment Alarm: Take effect if any alarm is valid.

2)   Fan Alarm 1~4: Take effect if any fan (4 in total) in the module is abnormal.

3)   Temperature Alarm: Take effect if the device temperature is higher than the device over temperature THR (80℃ by default).

4)   Power Temperature Alarm 1~2: Take effect if the temperature of any PSE is higher than the device over temperature THR (80℃ by default).

5)   DC Voltage Alarm: The alarm will occur if the input power<37V

6) Digital Unlocked Alarm: Take effect if the device is unlocked.

7) Firmware Mismatch Alarm: The module version does not match the system version.

8) Temperature THR: Alarm will be generated if the device temperature exceeds this value.

9) Power Temperature THR: Alarm will be generated if the power module temperature exceeds this value.

10) RU Temperature THR: Alarm will be generated if RU temperature exceeds it.

11) Optical Module Temperature THR: Generate alarm if the optical module temperature this value.

➢ **To set alarm info parameters**

1. Click DCU—Alarm Info to enter the configuration page.

2. For alarms, click the edit button and Disable and Enable button can be seen. Select Enable and the green icon will be displayed .

3. For Temperature THR, Power Temperature THR, Optical Module Temperature THR, System Delay THR, click to enter the values within the range according to the form above.

4. Click Finish to complete the configuration.

5.3.1.2   OP Info

5.3.1.2.1 CPRI Info

The range of optical module transmitting power (Tx PWR) is -3dBm~5dBm; The range of Rx PWR shall be greater than -10dBm. The maximum operating temperature must be lower than 80 ° C and the optical module must be correctly matched. Otherwise, an exception may occur. Alarms can be queried on this interface.

5.3.1.2.3   OP Group

a. For the port configuration of 10G DEU, we design the new GUI for the various SFP port config. It supports 3 configuration mode on each 6 SFP ports (Group). *Click DEU   OP Info   OP Group to configure SFP port as shown in* Figure 154.

Figure 154. DEU 10G   OP Info   OP Group

Click ✎ *button in Group Mode. In the drop-down box, there are three models to choose from. Then click Save to complete the configuration. Default configuration is model 1*

Model 1: Two SFP ports are mapped to one RU, and it is recommended to align the DEU and RU SFPs in the same order, otherwise an SFP alarm will occur.

Model 2: 1 SFP port is mapped to 1 RU.

Model 3: 3 SFP ports are mapped to 1 RU. It is recommended to align the DEU and RU SFP in the same order, otherwise an SFP alarm will occur.

5.3.1.3   Carrier Info

➢ To configure carrier info

1. Click DEU Carrier Info Add to set UL Center Freq. and DL Center Freq. to enter the following page.

2. Click the icon ✏️ in each field and select one from the drop-down options, enter values within the range and select ON/OFF and Enable/Disable button.

3. Click Finish to set.
