

1. RF Exposure Requirements

1.1 General Information

Client Information

Applicant: Shenzhen Lamzu Electronic Technology Co.,Ltd
Address of applicant: Building 301, Lushi Industrial Building, Zone 28, Dalang Community, Xin'an Street, Bao'an District, Shenzhen, China
Manufacturer: Shenzhen Lamzu Electronic Technology Co.,Ltd
Address of manufacturer: Building 301, Lushi Industrial Building, Zone 28, Dalang Community, Xin'an Street, Bao'an District, Shenzhen, China

General Description of EUT:

Product Name: Gaming mouse
Trade Name: LAMZU
Model No.: MAYA X
Adding Model(s): C-MS0005, MS0005-002, MAYA X 8K
Rated Voltage: Battery DC3.7V
Battery Capacity: 250mAh
Power Adapter Model: /
FCC ID: 2A8LL-MAYAX
Equipment Type: Portable device

Technical Characteristics of EUT:

Frequency Range: 2403-2480MHz
Max. Field Strength: 90.47dBuV/m
Modulation: GPSK
Quantity of Channels: 16
Channel Separation: /
Antenna Type: PCB Antenna
Antenna Gain: -2.39dBi

CHANNEL LIST

Channels	1	2	3	4	5	6	7	8
Frequency (MHz)	2403	2472	2466	2458	2450	2462	2442	2468
Channels	9	10	11	12	13	14	15	16
frequency (MHz)	2424	2474	2446	2464	2480	2444	2470	2452

1.2 RF Exposure Exemption

According to §1.1307(b)(3) and KDB 447498 D04 Interim General RF Exposure Guidance v01, system operating under the provisions of this section shall be operating in a manner that the public is not exposed to radio frequency energy level in excess limit for maximum permissible exposure.

Option A: FCC Rule Part 1.1307 (b)(3)(i)(A): The available maximum time-averaged power is no more than 1mW, regardless of separation distance.

Option B: FCC Rule Part 1.1307 (b)(3)(i)(B): The available maximum time-averaged power or effective radiated power (ERP), whichever is greater, is less than or equal to the threshold P_{th} (mW) described in the following formula. P_{th} is given by:

$$P_{th} \text{ (mW)} = \begin{cases} ERP_{20 \text{ cm}} (d/20 \text{ cm})^x & d \leq 20 \text{ cm} \\ ERP_{20 \text{ cm}} & 20 \text{ cm} < d \leq 40 \text{ cm} \end{cases}$$

Where

$$x = -\log_{10} \left(\frac{60}{ERP_{20 \text{ cm}} \sqrt{f}} \right) \text{ and } f \text{ is in GHz;}$$

and

$$ERP_{20 \text{ cm}} \text{ (mW)} = \begin{cases} 2040f & 0.3 \text{ GHz} \leq f < 1.5 \text{ GHz} \\ 3060 & 1.5 \text{ GHz} \leq f \leq 6 \text{ GHz} \end{cases}$$

d = the separation distance (cm);

Option C: FCC Rule Part 1.1307 (b)(3)(i)(C): The minimum separation distance (R in meters) from the body of a nearby person for the frequency (f in MHz) at which the source operates, the ERP (watts) is no more than the calculated value prescribed for that frequency. R must be at least $\lambda/2\pi$, where λ is the free-space operating wavelength in meters.

Single RF Sources Subject to Routine Environmental Evaluation	
RF Source frequency (MHz)	Threshold ERP (watts)
0.3-1.34	$1,920 R^2$
1.34-30	$3,450 R^2/f^2$
30-300	$3.83 R^2$
300-1,500	$0.0128 R^2 f$
1,500-100,000	$19.2 R^2$

For Multiple RF sources: FCC Rule Part 1.1307(b)(3)(ii):

- (A) The available maximum time-averaged power of each source is no more than 1 mW and there is a separation distance of two centimeters between any portion of a radiating structure operating and the nearest portion of any other radiating structure in the same device, except if the sum of multiple sources is less than 1 mW during the time-averaging period, in which case they may be treated as a single source (separation is not required).
- (B) In the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^a \frac{P_i}{P_{th,i}} + \sum_{j=1}^b \frac{ERP_j}{ERP_{th,j}} + \sum_{k=1}^c \frac{Evaluated_k}{Exposure Limit_k} \leq 1$$

1.3 Calculated Result

Radio Access Technology	Prediction Frequency (MHz)	Max. Field Strength (dBuV/m)	Antenna Gain (dBi)	Output Power (dBm)	Tune-Up Power (dBm)	ERP (dBm)
SRD	2403	90.47	-2.39	-2.40	-2.00	-6.54

Frequency (MHz)	Option	Min. Distance (cm)	Max. Power (dBm)	Max. Power (mW)	Exposure Limit (mW)	Ratio	Result Pass/Fail
2403	B	0.5	-2.00	0.63	2.787	0.23	Pass

Note: 1. $EIRP = E - 104.8 + 20 \log D$; Output Power = EIRP - Antenna Gain;

$ERP = EIRP - 2.15 \text{ dB}$

2. Option A, B and C refers as clause 1.2.

3. For option B, Max (time-averaged power, effective radiated power (ERP)) converts to Max. Power.

For option C, ERP converts to Max. Power;

4. For option B, P_{th} (mW) converts to Exposure Limit (mW); For option C, ERP (W) converts to Exposure Limit (mW).

5. $Ratio = \text{Tune-Up ERP (mW)} / \text{Exposure Limit (mW)}$

Mode for Simultaneous Multi-band Transmission:

Radio Access Technology	Ratio 1	Ratio 2	Ratio 3	Simultaneous Ratio	Limit	Result Pass/Fail
/	/	/	/	/	/	/

Result: Pass
