

RF exposure

According to 447498 D01 General RF Exposure Guidance v06

The 1-g and 10-g SAR test exclusion thresholds for 100 Mb to 6 Gb at test separation distances \leq 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] $\cdot [\sqrt{f(Ghz)}] \le 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR,

Where;

f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest \mathbb{N} and mm before calculation

The result is rounded to one decimal place for comparison

Results

Mode	Frequency (础)	Distance (mm)	Max Average tune-up power (dBm)		Calculation value	Exclusion Threshold
			(dB m)	(mW)	value	Theshold
LE 1 Mbps	2.402 ~ 2.480	5	-1.50	0.708	0.223	≤3.0
