I . Programming the Remote into the Alarm System

Refer to the programming guide that came with your alarm system for programming a wireless device (KEYFOB) into the security system.

II. Changing Panic Operation to Delay Mode or Instant Mode

Note: To use this feature you must have programmed button 4 into the alarm panel as "PANIC". The 3 second delay is the factory default.

SETTING PANIC BUTTON FOR DELAY TRANSMISSION MODE

(By selecting this feature, the user must hold down panic button for 3 seconds before transmission is sent.)

1. Press all 4 button at the same time until the LED begins to flash. *(This will take approximately 3 seconds before LED flashes.)*
2. Release all 4 buttons
3. Press Button 2 *(TOP RIGHT BUTTON)*
4. LED should stop flashing

SETTING PANIC BUTTON INTO INSTANCE TRANSMISSION MODE

1. Press all 4 button at the same time until the LED begins to flash. *(This will take approximately 3 seconds before LED flashes.)*
2. Release all 4 buttons
3. Press Button 1 *(TOP LEFT BUTTON)*
4. LED should stop flashing
