Features of the joystick

Digital joystick works efficiently in each game you play.

Eight programmable buttons : Most games use button1 (the trigger) to fire weapons . Games often use other buttons to select , load weapons , assign targets ..and so on.

   1.1. **Four** conventional joystick buttons on the handle (button 1-4)

   1.2. Four additional buttons on the base (button 5-8)

2. ***Throttle:*** The throttle gives you command over incremental game functions. To speed up , slow down , enjoy the feeling of different speed. It can also assign as thrust or altitude.

3. ***Rudder :*** Rudder gives you a 3D control besides conventional x-axis , and y-axis joystick movement . That will give you more rapid movement for dogfight.

4. ***Hat switch:*** Hat switch gives different and directional view sights to see the environment with a touch of the thumb. You can enjoy different view point as your wish.
