(1) For more information about traditional and new thermal metrics, see [Semiconductor and IC Package Thermal Metrics](#).

(2) °C/W = degrees Celsius per watt.

(3) These values are based on a JEDEC-defined 2S2P system (with the exception of the Theta JC [R Θ_{JC}] value, which is based on a JEDEC-defined 1S0P system) and will change based on environment as well as application. For more information, see these EIA/JEDEC standards:

8.10 Timing and Switching Characteristics

8.10.1 Antenna Radiation Patterns

This section discusses transmitter and receiver antenna radiation patterns in both Azimuth and Elevation planes for a specified frequency.

8.10.1.1 Antenna Radiation Patterns for Receiver

Figure 8-1 shows typical antenna radiation gain plots normalized to boresight at various frequencies for the four receivers in both Azimuth (H-Plane) and Elevation (E-Plane) planes.

8.10.1.2 Antenna Radiation Patterns for Transmitter

Figure 8-2 shows typical antenna radiation patterns for the three transmitters in both Azimuth (H-Plane) and Elevation (E-Plane) planes.

8.10.3 Power Supply Sequencing and Reset Timing

The IWR6843AOP device expects all external voltage rails to be stable before reset is deasserted. Figure 8-4 describes the device wake-up sequence.
