1. The information of the EUT is declared by the manufacturer.		
2. The laboratory is not responsible for the product technical specification provided by the client.		

2. Human Exposure Assessment

Due to the design and insallation of this product,it is not possible to conduct SAR evaluation.This is because client either manufactures or supplies the antenna(s) that will be used in the installation of this product.Therefore,this product will be evaluated as a mobile device per 47 CFR § 1.1310 titled "Radiofrequency radiation exposure limits",generally referred to as MPE limits.

In 47 CFR § 2.1091,paragraph(b) defines a mobile device as "a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 cm is normally maintained between the transmitter's radiating structure(s) and the bod of the user or nearby persons. " This product is intended to be installed into a trampoline such that the unit is physically secured at one location. In the installation guide supplied with the product.

Client has made the following statement:"IMPORTANT:To meet the FCC's RF Exposure Guidelines,the antenna should be installed so there is at least 20 cm of separation between the body of the user and nearby persons and the antenna".Based on the installation of the transceiver and the antenna,the transmiitters radiating structure is more than 20 cm from the user.Thus,this product is a "mobile device" as defined in section § 2.1091 paragraph(b).

Exposure evaluation

$$S = \frac{PG}{4\pi R^2}$$

Where

S:power density in mW/cm²

P:power input to the antenna in mW

G:power gain of the antenna in the direction of interest relative to an isotropic radiator.

R:distance to the center of radiation of the antenna in cm

3. RF Output Power
