

Statement about ShadoWatch WLAN function

This is to declare that ShadoWatch WLAN device MT5931 supports RX only.

It doesn't support signal transmitting function.

ShadoWatch working process is as follows: WLAN device scans Wifi signals nearby to acquire the MAC addresses of those Wifi signals. Then MAC addresses will be uploaded to third-party google geo-map for geo-coordinates via 4G/LTE network module.

The WLAN device only takes part in scanning Wifi signals nearby. It doesn't connect to any Wifi signal.

All network data of ShadoWatch is uploaded or downloaded via 4G/LTE module.
