

KDB 447498 D01 Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies v06.

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency(RF) Radiation as specified in §1.1307(b)

### **EUT Specification**

| FCC ID                     | 2BMPT-224CS-N1V1BY                                   |  |  |  |  |  |
|----------------------------|--|--|--|--|--|--|
|                            |  |  |  |  |  |  |
| EUT                        | Wireless IP Camera                                   |  |  |  |  |  |
| Frequency band (Operating) | □ BT: 2.402GHz ~ 2.480GHz                            |  |  |  |  |  |
|                            | 🖂 WLAN: 2.412GHz ~ 2.462GHz                          |  |  |  |  |  |
|                            | 🗌 RLAN: 5.180GHz ~ 5.240GHz                          |  |  |  |  |  |
|                            | 🗌 RLAN: 5.260GHz ~ 5.320GHz                          |  |  |  |  |  |
|                            | □ RLAN: 5.500GHz ~ 5.700GHz                          |  |  |  |  |  |
|                            | □ RLAN: 5.745GHz ~ 5.825GHz                          |  |  |  |  |  |
|                            | □ Others:  |  |  |  |  |  |
| Device category            | Portable (<20cm separation)                          |  |  |  |  |  |
|                            | ⊠ Mobile (>20cm separation)                          |  |  |  |  |  |
|                            | Others   |  |  |  |  |  |
| Exposure classification    | Occupational/Controlled exposure (S = 5mW/cm2)       |  |  |  |  |  |
|                            | General Population/Uncontrolled exposure (S=1mW/cm2) |  |  |  |  |  |
| Antenna diversity          | ☐ Single antenna                                     |  |  |  |  |  |
|                            | ⊠ Multiple antennas                                  |  |  |  |  |  |
|                            | □ Tx diversity                                       |  |  |  |  |  |
|                            | □ Rx diversity                                       |  |  |  |  |  |
|                            | □ Tx/Rx diversity                                    |  |  |  |  |  |
| Antenna gain (Max)         | ANT1: 1.92dBi  |  |  |  |  |  |
|                            | ANT2: 1.92dBi  |  |  |  |  |  |
| Evaluation applied         | MPE Evaluation                                       |  |  |  |  |  |
|                            | □ SAR Evaluation                                     |  |  |  |  |  |

### Limits for Maximum Permissible Exposure(MPE)

|   |                |                | ,                            |         |  |  |  |  |
|---|----------------|----------------|------------------------------|---------|--|--|--|--|
| Frequency   | Electric Field | Magnetic Field | Power                        | Average |  |  |  |  |
| Range(MHz)  | Strength(V/m)  | Strength(A/m)  | Density(mW/cm <sup>2</sup> ) | Time    |  |  |  |  |
| (A) Limits for Occupational/Control Exposures         |                |                |                              |         |  |  |  |  |
| 300-1500  |                | F/300          |                              | 6       |  |  |  |  |
| 1500-100000   |                | 5              |                              | 6       |  |  |  |  |
| (B) Limits for General Population/Uncontrol Exposures |                |                |                              |         |  |  |  |  |
| 300-1500  |                | F/1500         |                              | 6       |  |  |  |  |
| 1500-100000   |                |                | 1                            | 30      |  |  |  |  |

# Friis transmission formula: Pd=(Pout\*G)\(4\*pi\*R2)

Where

Pd= Power density in mW/cm<sup>2</sup>

Pout=output power to antenna in Mw

G= gain of antenna in linear scale

Pi=3.1416

R= distance between observation point and center of the radiator in cm Pd the limit of MPE, 1mW/cm2. If we know the maximum gain of the antenna and total power input to the antenna, through the calculation, we will know the distance where the MPE limit is reached.

# **Max Measurement Result**

| Operating Mode | Measured<br>Power | Tune up<br>tolerance | Max. Tune<br>up Power | Antenna<br>Gain | Power<br>density at<br>20cm | Power<br>density Limits<br>(mW/cm2 ) |
|----------------|-------------------|----------------------|-----------------------|-----------------|-----------------------------|--------------------------------------|
|                | (dBm)             | (dBm)                | (dBm)                 | (dBi)           | (mW/ cm2 )                  | (IIIVV/CIIIZ)                        |
| WiFi 2.4G ANT1 | 16.25             | 16.25 ±1             | 17.25                 | 1.92            | 0.0164                      | 1                                    |
| WiFi 2.4G ANT2 | 19.50             | 19.50 ±1             | 20.50                 | 1.92            | 0.0347                      | 1                                    |

Result: No Standalone SAR test is required.
