

**EXHIBIT 4****Section 2.1033 (c)(8) DC VOLTAGES AND CURRENTS**

The dc voltage applied to and dc currents into the several elements of the final radio frequency amplifying device for normal operation over the power range.

Response

The dc currents into and dc voltage applied to the final radio frequency amplifier in the SBCBR for normal operation are 210 mA and 10V which is generated from a 15V supply voltage through a voltage regulator.

**Section 2.1033 (c)(9) TUNE-UP PROCEDURE**

Turn-up procedure over the power range, or at specific operating power levels.

Response

The SBCBR transceiver does not have user tune-up procedures for various power levels. The only available power adjustment for the user is through the push button located on the faceplate of the SBCBR transceiver, which allows the SBCBR transceiver to operate at the proper power level.
