

Per 15.203, the antenna is internal and permanently attached. It is not intended to be serviced by the customer and is, therefore only serviceable by Logitech, Inc. authorized personnel.

The antenna is a Rufa 2.4GHz SMD Antenna by gigaAnt , with 2.67dBi max peak gain once installed on the PCBA.

The gigaAnt product specification sheet is included in this exhibit.

# Product Specification

Rufa 2.4 GHz SMD Antenna

## 1. FEATURES

- Designed for 2.4 GHz applications [Bluetooth™, WiFi™ (802.11b/g), Zigbee™, WiMedia™ etc.]
- Intended for SMD mounting
- Supplied in tape on reel

## 2. DESCRIPTION

The Rufa antenna is intended for use with all 2.4 GHz applications. The antenna requires a groundplane, i.e your device acts as an active part of the antenna and thus demand careful consideration concerning its placement

## 3. APPLICATION

- Mobile phones
- PDAs
- Headsets
- Laptops
- PC- Cards
- CF- Cards

## 10. ELECTRICAL INTERFACE

### 10.1 Transmission line and matching

The matching network has to be individually designed using one, two or three components.

t, w = Unique dimensioning according to your PCB \*

C = Inductor and capacitor values according to your specific device\*

\* gigaAnt provides this service upon request

### 10.2 Test board dimensions

The testboard is designed for evaluation purposes for Rufa 2.4 GHz SMD antenna. The card has the same size as a typical PCMCIA card and is fitted with an SMA connector.

### 10.3 Test board matching

The testboard is matched with above specified component. Note! The component value(s) will vary depending on size of PCB, surrounding components etc.

## 11. SOLDERING

### 11.1 Recommended soldering conditions

### 11.2 Leadfree soldering

The antenna has been tested and approved for leadfree soldering. The reflow curve and solder paste used is listed below.

Solder paste: KOKI S3X58-M405

## 12. RELIABILITY

### 12.1 Temperature and Humidity

| Item                          | Standard                                          | Low               | High      | Duration            |
|-------------------------------|---------------------------------------------------|-------------------|-----------|---------------------|
| Operating temperature         | EN/IEC 60068-2-2, Test Bd: Dry heat               | -30 degC          | +90 degC  | -                   |
| Temperature cycling           | EN/IEC 60068-2-14, Test Na: Change of temperature | -40 degC          | +90 degC  | 500 cycles / 10 min |
| Storage life Humidity         | EN/IEC 60068-2-1, Test Ca: Damp heat              | +60 degC / 90% RH |           | 500 h               |
| Storage life Low temperature  | EN/IEC 60068-2-1, Test Ad: Cold                   | -55 degC          | -         | 500 h               |
| Storage life High temperature | EN/IEC 60068-2-2, Test Bb: Dry heat               | -                 | +125 degC | 500 h               |

### 12.2 Mechanical

| Item      | Standard                               | Low                                                                                                                     | High | Duration                              |
|-----------|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------|------|---------------------------------------|
| Bending   | IEC 60068-2-21, Test Ue1: Bending      | Bending 1 mm at a rate of 1 mm/s with support at end of PCB<br>1mm depth on reference board                             |      |                                       |
| Shear     | IEC 60068-2-21, Test Ue3: Shear        | Force of 5 N applied to the side of the antenna.                                                                        |      |                                       |
| Drop test |                                        | Dummy weight: 150g<br>Height: 170cm                                                                                     |      | One drop at each side, total drops: 6 |
| Vibration | EN/IEC 60068-2-6, Test Fc (sinusoidal) | Acceleration spectral density:10-1000Hz<br>Acceleration: 20m/s <sup>2</sup><br>Number of axes: 3 mutually perpendicular |      | 5 cycles per axis                     |

### 12.3 Miscellaneous

| Item          | Standard                   | Low                                                                                                    | High | Duration |
|---------------|----------------------------|--------------------------------------------------------------------------------------------------------|------|----------|
| Solderability | EN/IEC 60068-2-58, Test Td | Visual inspection of soldering pads.<br>Estimation of how many % of the pads that are well tin plated. |      |          |

### 12.4 Judgement standard

The judgement of the above tests should be made as follows:

1. Visual inspection - Normal appearance with no obvious cracking, peeling-off.
2. Electrical inspection - The DUT satisfies the VSWR specification throughout the 2.4-2.5 GHz band

## 13. HAZARDOUS MATERIAL REGURATION CONFORMANCE

|                                         |                                          |
|-----------------------------------------|------------------------------------------|
| Cadmium and cadmium compound.           | Lead and lead compound                   |
| Organic brominated compound (PBB, PBDE) | Mercury and mercury compound             |
| Polychlorinated biphenyl (PCB)          | Sexivalent chrome compound               |
| Polychlorinated naphthalene (PCN)       | Chlorinated paraffin (CP)                |
| Organic tin compound                    | Mirex                                    |
| Asbestos                                | Formaldehyde                             |
| Azo compound                            | Tetra-bromo-bisphenol-A-bis (TBBP-A-bis) |

## 14. APPLICATION EXAMPLE

### General

The antenna is of a quarter wave type and is dependent on the groundplane area to complete the antenna function. The antenna performance is also dependent on the size of the groundplane and the transparent area.

#### 1. Placement of the antenna

The antenna shall be placed on a transparent area without underlying groundplane at the edge of the PCB oriented as above. Groundplane area surrounding the antenna should be with a clearance of  $G=3-5$  mm.

#### 2. Placement of 2.4 GHz module

To avoid losses in the strip line, the module shall be placed as close to the antenna as possible.

#### 3. Strip line

The strip line must be dimensioned according to your specific PCB. (see fig 1). No crossing strip lines are allowed between the strip line and its ground plane.

#### 4. Via Connections

To avoid spurious effects via connections must be made to analogue ground.

#### 5. Component matching

Component values are depending on antenna placement, PCB dimensions and location of other components.

#### 6. DC Block

Might be needed depending on RF Module configuration.

#### 7. Clearance

No components allowed within the clearance area with a minimum distance to other components,  $C=3-5$  mm.

#### 8. Casing material

No metal casing or plastics using metal flakes should be used, avoid also metallic based paint or laquer. Keep a minimum clearance of 1mm between the antenna and the casing.

**Note ! Incorrect implementation of the antenna will affect the performance.  
Contact gigaAnt for implementation services.**

## 15. PACKAGING

### 15.1 Shelf storage recommendation

|               |                                             |
|---------------|---------------------------------------------|
| Temperature   | -10 to +40 degree C                         |
| Humidity      | Less than 75% RH                            |
| Shelf Life    | 18 Months                                   |
| Storage place | Away from corrosive gas and direct sunlight |

### 15.2 Tape characteristics

| W      | F         | E <sub>1</sub> | P <sub>0</sub> | P <sub>1</sub> | P <sub>2</sub> | A <sub>0</sub> | B <sub>0</sub> | K <sub>0</sub> | T        | D <sub>0</sub> | D <sub>1</sub> |
