

Munich, 2022-01-21

Dear Sir or Madam,

I'm happy to elaborate on how the KINEXON Vehicle Tag satisfies the requirements of 15.519(a)(1).

As described in the Operation Description, the Vehicle Tag will only transmit when it is associated to a KINEXON RTLS or to another KINEXON tag. It will listen for beacons transmitted by the KINEXON anchors or KINEXON SafeTags before transmitting. It will cease transmission within 10 s if no anchor beacons are received or if no acknowledgements from associated tags are received.

The test report compiled by CSA shows this signal deactivation in section 5.6.

Kind regards,

Dr. Julian Habigt  
Head of Sensor Network Engineering  
KINEXON GmbH
