KTL Test Report:	9R02129
Applicant:	Digital Security Controls Ltd. 3301 Langstaff Road Concord, Ontario L4K 4L2
Equipment Under Test: (E.U.T.)	WLS907NB433 Motion Detector
FCC ID:	F5300NB907
In Accordance With:	**FCC Part 15, Subpart C** For Low Power Transmitters Operating Periodically In The Band 40.66 - 40.77 MHz And Above 70 MHz
Tested By:	KTL Ottawa Inc. 3325 River Road, R.R. 5 Ottawa, Ontario K1V 1H2
Authorized By:	
	Russell Grant, Wireless Group Manager
Date:	
Total Number of Pages:	22

Section 1. Summary of Test Results

Manufacturer: Digital Security Controls Ltd.

Model No.: WLS907NB433

Serial No.: None

Date Received In Laboratory: January 17, 2000

KTL Identification No.: Item # 1 & 2

General: **All measurements are traceable to national standards.**

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15, Subpart C, Paragraph 15.231. All tests were conducted using measurement procedure ANSI C63.4-1992. Radiated emissions are made on an open area test site. A description of the test facility is on file with the FCC.

THIS TEST REPORT RELATES ONLY TO THE ITEM(S) TESTED.

THE FOLLOWING DEVIATIONS FROM, ADDITIONS TO, OR EXCLUSIONS FROM THE TEST SPECIFICATIONS HAVE BEEN MADE. None
See " Summary of Test Data".

NVLAP LAB CODE: 100351-0

It is recommended that the margin of compliance be improved to allow for manufacturing tolerances

TESTED BY: _____ DATE: _____
Kevin Rose, Test Technician

Summary Of Test Data

Name of Test	Paragraph Number	Results
Transmission Requirements	15.231(a)	Complies
Radiated Emissions	15.231(b)	Complies
Occupied Bandwidth	15.231(c)	Complies
Frequency Tolerance	15.231(d)	Not Applicable
Periodic Alternate Field Strength Requirements	15.231(e)	Not Applicable
Powerline Conducted Emissions	15.207	Not Applicable

Footnotes For N/A's: This equipment is battery operated.

Test Conditions:

Indoor Temperature: 20 °C
Humidity: 20 %

Outdoor Temperature: 10 °C
Humidity: 20 %

Section 2. Equipment Under Test (E.U.T.)

General Equipment Information

Frequency Range:	433.92 MHz	
Operating Frequency(ies) of Sample:	433.92 MHz	
Type of Emission:	Pulse Width Modulation	
Emission Designator:	42K0L1D (See Attached Graph)	
Supply Power Requirement:	3 x 1.5 V (AAA Batteries)	
Duty Cycle Calculation:	-15.4 dB	(See attached duty cycle description and time domain graphs)

Data Transmission Format

The transmitted data packet is a fixed length packet. The packet contains all of the necessary information to indicate which sensor generated the packet, the type of sensor and the status of the sensor's inputs. The data is sent at a rate of 500 µS per bit or 2 Kbits per second. Figure 1 shows the bit timing used for all bits in the packet. Where a low logic present for the 500 µS bit time represents a data logic "0" and 250 µS low then 250 µS high represents a data logic "1".

Figure 1: Bit Timing

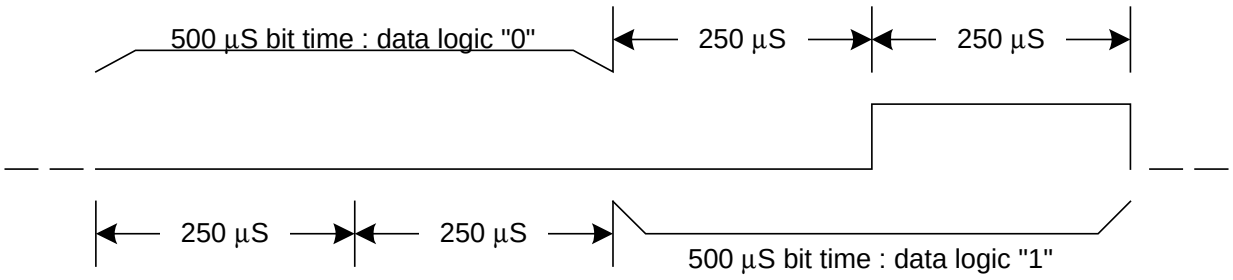

Figure 2 shows the format of the transmitted data packet.

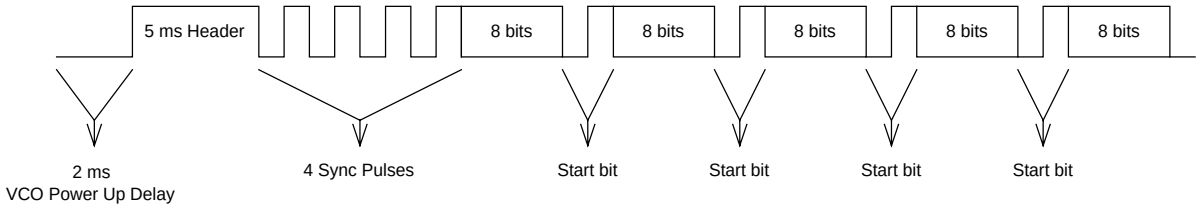
Figure 2: Data Packet Format



Total Data Packet Length: 48 x 0.5 ms + 5 ms = 29 ms

Maximum ON Time: 48 x 0.25 ms + 5 ms = 17 ms

Duty Cycle: $20 \text{ Log} \left(\frac{17}{100} \right) = -15.4 \text{ dB}$

Section 3. Transmission Requirements

NAME OF TEST: Transmission Requirements	PARA. NO.: 15.231(a)
TESTED BY: Russell Grant	DATE: January 20, 2000

Minimum Standard:

15.231(a) Continuous transmissions such as voice, video or data transmissions are not permitted.

15.231(a)(1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds after being released.

15.231(a)(2) A transmitter activated automatically shall cease transmission within 5 seconds of activation.

15.231(a)(3) Periodic transmissions at regular pre-determined intervals are not permitted. However polling or supervisory transmissions to determine system integrity of transmitters used in security or safety applications are allowed if the periodic rate of transmission does not exceed one transmission of not more than one second duration per hour for each transmitter.

15.231(a)(4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm.

Test Results: Complies.

Test Data: Compliance was determined by verification of technical specifications and a functional test on the equipment.

Rationale for Compliance with Transmission Requirements

15.231(a)(1) : Not applicable. This equipment has no provision for manual activation.

15.231(a)(2) : The maximum transmission duration is 3.3 seconds. See attached graph.

15.231(a)(3) : Not applicable. This equipment has no provision for periodic transmissions.

15.231(a)(4) : Not applicable.

Section 4. Radiated Emissions

NAME OF TEST: Radiated Emissions	PARA. NO.: 15.231(b)
TESTED BY: Kevin Rose	DATE: January 20, 2000

Minimum Standard:

Permissible Field Strength Limits (Momentarily Operated Devices

Fundamental Frequency (MHz)	Field Strength of Fundamental Microvolts/Meter at 3 meters; (watts)	Field Strength of Unwanted Emissions Microvolts/Meter at 3 meters; (watts)
40.66 - 40.70	2,250	225
70-130	1, 250	125
130-174	1,250 to 3,750*	125 to 375
174-260 (note 1)	3,750	375
260-470 (note 1)	3,750 to 12,500*	375 to 1,250
Above 470	12,500	1,250

Notes:

# Use quasi-peak or averaging meter.	*For 130 - 174 MHz: FS (microvolts/m) = (56.82 x F) - 6136*
** Linear interpolation with frequency F in MHz*	*For 260 - 470 MHz: FS (microvolts/m) = (41.67 x F) - 7083*

Any emissions that fall within the restricted bands of 15.205 shall not exceed the following limits:

Frequency (MHz)	Field Strength (µV/m @ 3m)	Field Strength (dB @ 3m)
30 - 88	100	40.0
88 - 216	150	43.5
216 - 960	200	46.0
Above 960	500	54.0

Test Results: Complies. The worst-case emission level is 78.5 dBµV/m @ 3m at 433.91 MHz. This is 2.3 dB below the specification limit.

Test Data: See attached table.

Above 1 GHz a spectrum analyzer and low noise amplifier are used to measure emission levels. The spectrum analyzer resolution bandwidth was set to 1 MHz and video bandwidth was 3 MHz.

In the case of handheld equipment, the E.U.T. is rotated in three planes to obtain worst-case results.

Section 5. Occupied Bandwidth

NAME OF TEST: Occupied Bandwidth	PARA. NO.: 15.231(c)
TESTED BY: Russell Grant	DATE: January 20, 2000

Minimum Standard: 15.231(c) The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

Test Results: Complies. See attached graph.
The 20 dB bandwidth is 35 kHz.

Test Data: See attached graph.
