RF Exposure

	HMD19110003
Test Requirement:	FCC 47CFR 15.247(i)
Test Date:	2019-11-01
Mode of Operation:	Tx mode

Test Method:

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines.
This evaluation used FCC 47CFR 2.1091 to perform.

Test Results:

The EUT complied with the requirement(s) of this section.
EUT meets the requirements of these sections as proven through MPE calculation
The MPE calculation for EUT @ 20cm
Based on the highest P =1.367 mW

Pd = PG/ 4pi*R^2 = (1.367 x 1.995)/12.566* $(20)^2$
= (2.727)/12.566x 400= 2.727 /5026.4
= 0.000543mW/cm^2

where:
*Pd = power density in mW/cm2
* G = Antenna numeric gain (1.995); Log G = g/10 (g = 3dBi).
* P = Conducted RF power to antenna (1.367 mW).
* R = Minimum allowable distance.(20 cm)

*The power density Pd = 0.000543 mW/cm^2 is less than 1 mW/cm^2 (listed MPE limit)
*The SAR evaluation is not needed (this is a desk top device, R> 20 cm)
* The EUT(antenna) must be 0.2 meters away from the General Population.
