Dear Helen,

This product is not intended to be connected to AC mains supply.
This product is powered by DC which is generated by a residential alarm system.
For the engineering practical, we use a typical DC power supply instead of whole system
We hope this letter can satisfy your need.

If you have any further comments, please feel free contact us.

Best regards

David Wang

Question #1: The operational Description indicates that the device is powered by DC12V, but no documents in the filing explain clearly the source of the DC12V. Please explain why power line conducted emission testing is not required.

Best Regards,
Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
