Report No.:	MTi240722020-01E1
Date of issue:	2024-12-11
Applicant:	EclipseRX LLC
Product name:	Wireless Charging Station
Model(s):	BCS-01
FCC ID:	2BLX5BCS01

Shenzhen Microtest Co., Ltd. http://www.mtitest.cn

The test report is only used for customer scientific research, teaching, internal quality control and other purposes, and is for internal reference only.

# Instructions

- 1. This test report shall not be partially reproduced without the written consent of the laboratory.
- 2. The test results in this test report are only responsible for the samples submitted
- 3. This test report is invalid without the seal and signature of the laboratory.
- 4. This test report is invalid if transferred, altered, or tampered with in any form without authorization.
- 5. Any objection to this test report shall be submitted to the laboratory within 15 days from the date of receipt of the report.

# **1** General Description

#### 1.1 Description of the EUT

Product name:	Wireless Charging Station
Model name:	BCS-01
Series Model(s):	N/A
Model difference:	N/A
Electrical rating:	Input:DC5V Wireless output:watch 2.5W, strap:0.5W
Accessories:	1.Adapter: Mode:PD20C120K Input:100-240V~50/60Hz 0.6A Max Output:DC 5V/3A 15.0W,9V/2.22A 19.98W, 12V/1.67A 20.0W 2.Type-C to Type-C cable 1m*1
Test sample(s) number:	MTi240722020-01S1001
RF specification	
Operating frequency range:	Coil1(Watch):300-350kHz Coil2(Watch strap):440-480kHz
Modulation type:	ASK
Antenna(s) type:	Coil

#### 1.2 Description of test modes

No.	Emission test modes			
Mode1	Wireless Output(watch)			
Mode2	Wireless Output(watch strap)			
Mode3	Wireless Output(watch+watch strap)			
Mode4	Standby			

#### **1.3 Environmental Conditions**

During the measurement the environmental conditions were within the listed ranges:

Temperature:	15°C ~ 35°C
Humidity:	20% RH ~ 75% RH
Atmospheric pressure:	98 kPa ~ 101 kPa

#### 1.4 Description of support units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

Support equipment list						
Description	Model	Serial No.	Manufacturer			
iWatch	Apple Watch SE	FH7PP6BAG91J6 Apple				
Watch strap	BUV-01	/	EclipseRX LLC			
HUAWEI QUICK CHARGE(65W) HW-200200ZP1		JN67LSN7N03451	HUAWEI			
Support cable list						
Description Length (m)		From	То			
/	/	/	/			

#### 1.5 Measurement uncertainty

Measurement	Uncertainty
Conducted emissions (AMN 150kHz~30MHz)	±3.1dB
Occupied channel bandwidth	±3 %
Radiated spurious emissions (9kHz~30MHz)	±4.3dB
Radiated spurious emissions (30MHz~1GHz)	±4.7dB
Temperature	±1 °C
Humidity	±5%

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

# 2 Summary of Test Result

No.	Item	Standard	Requirement	Result
1	Antenna requirement	47 CFR Part 15C	47 CFR Part 15.203	Pass
2	Conducted Emission at AC power line	47 CFR Part 15C	47 CFR Part 15.207(a)	Pass
3	20dB Occupied Bandwidth	47 CFR Part 15C	47 CFR Part 15.215(c)	Pass
4	Emissions in frequency bands (below 30MHz)	47 CFR Part 15C	47 CFR Part 15.209	Pass
5	Emissions in frequency bands (30MHz - 1GHz)	47 CFR Part 15C	47 CFR Part 15.209	Pass

# 3 Test Facilities and accreditations

#### 3.1 Test laboratory

Test laboratory:	Shenzhen Microtest Co., Ltd.
Test site location:	101, No.7, Zone 2, Xinxing Industrial Park, Fuhai Avenue, Xinhe Community, Fuhai Street, Bao'an District, Shenzhen, Guangdong, China
Telephone:	(86-755)88850135
Fax:	(86-755)88850136
CNAS Registration No.:	CNAS L5868
FCC Registration No.:	448573
IC Registration No.:	21760
CABID:	CN0093

# 5 Evaluation Results (Evaluation)

#### 5.1 Antenna requirement

Refer to 47 CFR Part 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be
considered sufficient to comply with the provisions of this section.

#### 5.1.1 Conclusion:

The antenna of the EUT is permanently attached. The EUT complies with the requirement of FCC PART 15.203.

# 6 Radio Spectrum Matter Test Results (RF)

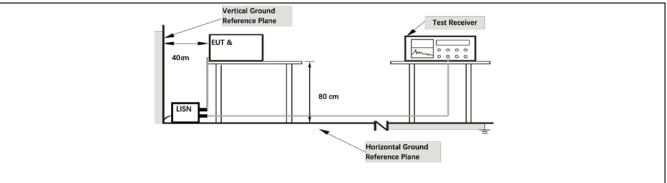

#### 6.1 Conducted Emission at AC power line

Test Requirement:	radiator that is designed to be co the radio frequency voltage that any frequency or frequencies, w exceed the limits in the following	Except as shown in paragraphs (b)and (c)of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 µH/50 ohms line impedance stabilization network (LISN).					
Test Limit:	Frequency of emission (MHz)	Conducted limit (dB	μV)				
		Quasi-peak	Average				
	0.15-0.5	66 to 56*	56 to 46*				
	0.5-5	56	46				
	5-30 60 50						
	*Decreases with the logarithm of the frequency.						
Test Method:	ANSI C63.10-2020 section 6.2						
Procedure:	Refer to ANSI C63.10-2020 section 6.2, standard test method for ac power- line conducted emissions from unlicensed wireless devices						

#### 6.1.1 E.U.T. Operation:

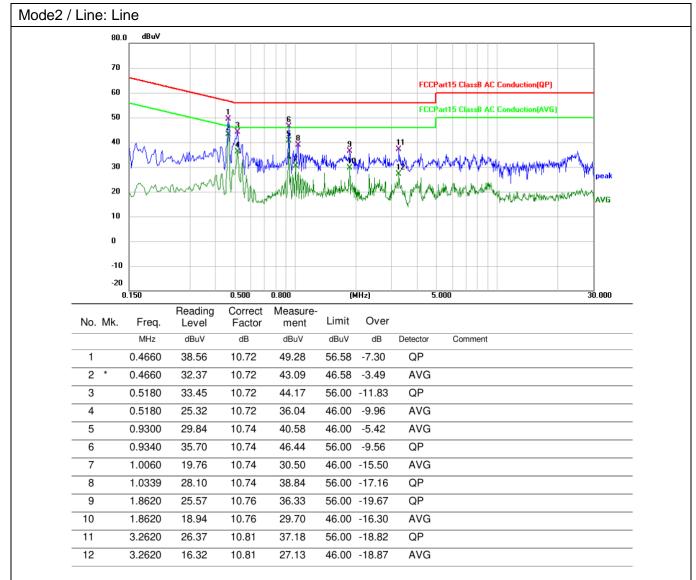

Operating Environment:							
Temperature:	tture: 25.9 °C Humidity: 44 % Atmospheric Pressure: 101 kPa					101 kPa	
Pre test mode: Mode1, Mode2, Mode3, Mode4							
Final test mode:All of the listed pre-test mode were tested, only the data of the worst mode (Mode2) is recorded in the report							

#### 6.1.2 Test Setup Diagram:

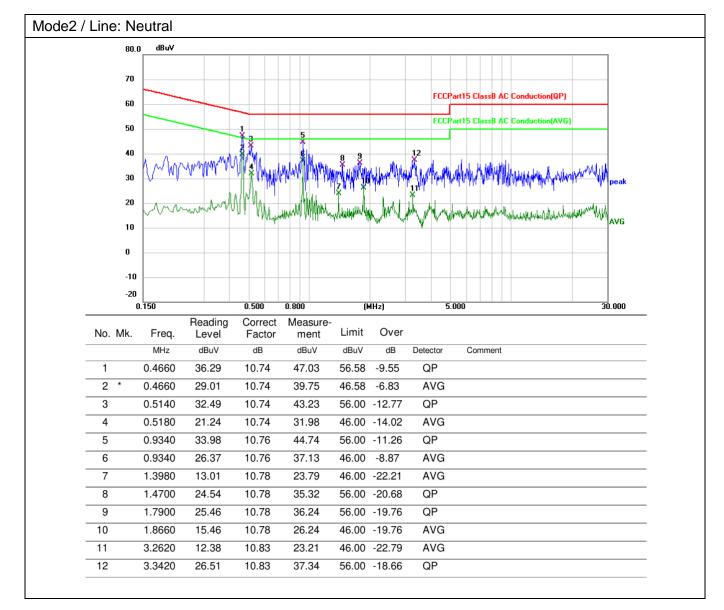

#### 6.1.3 Test Data:

#### 6.2 20dB Occupied Bandwidth

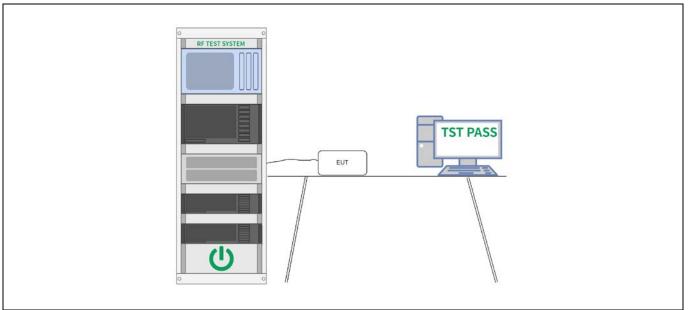

Test Limit:       Refer to 47 CFR 15.215(c), intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§ 15.217 through 15.257 and subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operated.         Test Method:       ANSI C63.10-2020, section 6.9.2         Procedure:       a) The spectrum analyzer center frequency is set to the nominal EUT chance center frequency. The span range for the EMI receiver or spectrum analyzer shall be between two times and five times the OBW.         b) The nominal IF filter bandwidth (3 dB RBW) shall be approximately three times RBW, unless otherwise specified by the applicable requirement. c) Set the reference level of the instrument as required, keeping the signal from exceeding the maximum input mixer level for linear operation. In general, the peak of the spectral envelope shall be more than [10 log (OBW/RBW)] below the reference level of the instrument, that is, if the requirement calls for measuring the ~20 dB OBW, the instrument noise floor at the selected RBW shall be at least 30 dB below the reference value.         e) The dynamic range of the highest level of the displayed trace (this is the reference value.       1) Set detection mode to peak and trace mode to max hold.         () Determine the reference value: Set the EUT to transmit an umodulated carrier or modulated signal, as applicable. Allow the trace to stabilize. Set the spectrum analyzer marker to the highest level of the displayed trace (this is the reference value).         () Set detection mode to peak and trace mode to max hold.       () Determine the reference value. Set EUT to tr	Test Requirement:	47 CFR Part 15.215(c)

	88-216	150 **	3				
	216-960	200 **	3				
	Above 960	500	3				
Test Method:	<ul> <li>** Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this section shall not be located in the frequency bands 54-72 MHz, 76-88 MHz, 174-216 MHz or 470-806 MHz. However, operation within these frequency bands is permitted under other sections of this part, e.g., §§ 15.231 and 15.241. In the emission table above, the tighter limit applies at the band edges. The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9–kHz, 110–490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. As shown in § 15.35(b), for frequencies above 1000 MHz, the field strength limits in paragraphs (a)and (b)of this section are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB und any condition of modulation. For point-to-point operation under paragraph (b)of this section, the peak field strength shall not exceed 2500 millivolts/meter at 3 meters along the antenna azimuth.</li> </ul>
