# RF EXPOSURE EVALUATION

#### RF EXPOSURE

## **Applicable Standard**

According to FCC §2.1093 and §1.1307(b) (1), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

Report No.: 2501Q43837E-RF-00D

According to KDB 447498 D01 General RF Exposure Guidance v06.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] •  $[\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR and  $\le 7.5$  for 10-g extremity SAR, where

- 1. f(GHz) is the RF channel transmit frequency in GHz.
- 2. Power and distance are rounded to the nearest mW and mm before calculation.
- 3. The result is rounded to one decimal place for comparison.
- 4. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test Exclusion.

### **Measurement Result**

### For worst case:

Mode	Frequency (MHz)	Max tune-up conducted power <sup>#</sup> (dBm)	Max tune-up conducted power <sup>#</sup> (mW)	Distance (mm)	Calculated value	Threshold (1-g SAR)	
BLE	2402-2480	3.5	2.24	5	0.7	3	Yes

**Result: Compliant**
