Re: Permissive Change to FCC ID: HZB-U5358-480
Job Number: 3004918
Report Number: 30049181

We, Intertek Testing Services, are submitting a Class II Permissive Change application for our client Western Multiplex. The purpose of this application is to show compliance after modifications have been made to the unit which was previously granted under FCC ID: HZB-U5358-480.

According to the description of modification (see exhibit titled Description of changes to Tsunami 480), the transmitter portion of the devices has not been changed. Only the digital part and power supply have been modified. Therefore, only FCC Part 15 Subpart B testing was performed (see exhibit entitled FCC Part 15 Subpart B Report).

In addition to the aforementioned exhibits, the following documents that reflect and support the changes made have also been submitted as exhibits:

- Compliance to rule 1.1310
- Compliance with 15.407(g) frequency stability
- Compliance with 15.407(C)
- Installation statement
- Label Design
- FCC part 15 Subpart E Test Report
- Antennas to be used
- Schematics (changed areas have been marked by dashed square or solid circle)
- Block Diagram (changed areas have been marked by dashed square or solid circle)
- Theory of Operation
- Parts List

Sincerely,

David Chernomordik
Technical Manager
